Pneumonia and Influenza Mortality from  
the National Center for Health Statistics Mortality Surveillance System  
National Summary data through the week ending March 1, 2025

### Influenza-Associated Pediatric Deaths by Week of Death, 2021-22 season to 2024-25 season

# Summary as of the Week Ending March 1, 2025

- 2024-25 has been a higher severity season overall and for all age groups, and the first high severity season since 2017-18.
- U.S. influenza activity has lessened in recent weeks.
  - Percent of tests positive peaked at ~32% in early February; currently ~19%.
- Influenza A(H3N2) influenza A(H1N1)pdm09 viruses have co-circulated, with low circulation of influenza B viruses.
- As of March 1, 2025 the cumulative influenza-associated hospitalization rate is 107.2/100,000 population.
- 114 influenza-associated pediatric deaths reported this far this season.

# Thank you
