Appendix: Analytical Notes

^a Variable Q141/QN141: Response option 7 (“something else not included here”) aligns with variable Q141_TEXT in which the respondent specifies how they describe their sexual orientation. In general, this response option indicates that the respondent felt that none of the existing response options described their sexual orientation. If respondents chose to provide a write-in response, write-in responses corresponding to an existing response option were recoded. The analyst is cautioned that response option “7 - something else not included here,” when paired with Q141_TEXT (1) may provide text corresponding to one of the existing response options (recoded in variable QN141R), (2) may represent a sexual orientation category not listed, (3) may represent information not relevant to sexual orientation, or (4) may not have additional descriptive information. Analysts should examine the write-in text further. Also, see variable QN141R which was derived from Q141/QN141 and included recodes from Q141_TEXT.

^b Variable Q142/QN142: Response option 4 (“something else not included here”) aligns with variable Q142_TEXT in which respondents specify how they describe their gender identity. In general, this response option indicates that the respondent felt that none of the existing response options described their gender identity. If respondents chose to provide a write-in response, write-in responses corresponding to an existing response option were recoded. The analyst is cautioned that response option “4 – something else not included here,” when paired with Q142_TEXT (1) may provide text corresponding to one of the existing response options (recoded in variable QN142R), (2) may represent a gender identity category not listed, (3) may represent information not relevant to sexual identity, or (4) may not have additional descriptive information. Analysts should examine the write-in text further. Also, see variable QN142R which was derived from Q142/QN142 and included recodes from Q142_TEXT.

^c The ever use recoded variables (EBIDIS, ECIGAR, ECIGT, EELCIGT, EHOOKAH, EHTP, EORAL, EPIPE, EPOUCH, EROLLCIGTS, ESLT, ESNUS) were logically edited based on self-reported tobacco product ever use and current use to account for inconsistent values between both statuses. The recoded variables are used to produce estimates for standard NYTS reports. Due to this update in coding, changes in ever use (estimated using ever use recode variables) between 2024 and prior years may be due to actual changes but also due to modifications to the edits made to the recoded variables in 2024.
