

FINDING OF NO SIGNIFICANT IMPACT

Modified Risk Orders for IQOS 2.4 System Holder and Charger, IQOS 3.0 System Holder and Charger, Marlboro Amber HeatSticks, Marlboro Green Menthol HeatSticks, and Marlboro Blue Menthol HeatSticks

Manufactured by Philip Morris Products S.A.

The Center for Tobacco Products of the Food and Drug Administration (FDA) has carefully considered the potential environmental effects of these actions and has concluded that these actions will not have significant impacts on the quality of the human environment. Therefore, environmental impact statements are not required.

Philip Morris Products S.A. wishes to continue to communicate modified risk information to consumers and submitted to FDA five modified risk tobacco product applications to obtain modified risk granted orders under the provisions of section 911 of the Federal Food, Drug, and Cosmetic Act.

The Agency prepared a programmatic environmental assessment (PEA), dated April 16, 2026, in accordance with the National Environmental Policy Act (NEPA) and FDA's NEPA regulations (21 CFR 25.40) to support the finding of no significant impact. The evidence supporting these findings is contained in the attached PEA, which is available to the public upon request.

The PEA evaluates potential environmental effects due to manufacturing, use, and disposal of the modified risk tobacco product. No increased or new types of environmental effects due to manufacturing the modified risk products are anticipated. The Agency does not foresee use of the modified risk tobacco products would result in new or different environmental effects. The Agency believes that the disposal of the modified risk tobacco products are the same as the disposal conditions of other heat-not-burn tobacco products that are currently marketed in the United States. Therefore, the Agency does not significant impacts to the environment due to the proposed actions as a result of manufacturing, use, and disposal of the modified risk tobacco products.
