U.S. FOOD & DRUG ADMINISTRATION

Human Foods Program

Memorandum

Date: February 27, 2026

From: Biologist, Office of Pre-Market Additive Safety, Environmental Review Team

Subject: Finding of No Significant Impact (FONSI) for Food Contact Substance Notification (FCN) 2488

Notifier: Zhuhai Kingfa Biomaterial Co., Ltd.

To: Sean Fischer, Ph.D., Regulatory Review Scientist, Office of Pre-Market Additive Safety, Division of Food Contact Substances

Through: Mariellen Pfeil, Lead Biologist, Office of Pre-Market Additive Safety, Environmental Review Team

Attached is the FONSI for FCN 2488, which is for the use of poly(1,4-butylene glycol-co-succinate), optionally reacted with glycerol (CAS Reg. No. 56-81-5) and/or hexamethylene diisocyanate (CAS Reg. No. 124-09-4) in coatings, films, molded articles, and thermoformed articles. This FONSI explains how the Food and Drug Administration (FDA) has met the requirements under the National Environmental Policy Act (NEPA) for this FCN.

After this notification becomes effective, copies of this FONSI, and the notifier's environmental assessment (EA) dated November 14, 2025, may be made available to the public. We will post digital transcriptions of the FONSI and the EA on the agency's public website.

Please let us know if there is any change in the identity or use of the food-contact substance.

Attachments: Finding of No Significant Impact

FINDING OF NO SIGNIFICANT IMPACT

Proposed Action: Food Contact Substance (FCS) Notification (FCN) 2488, submitted by Zhuhai Kingfa Biomaterial Co., Ltd. for the use of poly(1,4-butylene glycol-co-succinate), optionally reacted with glycerol (CAS Reg. No. 56-81-5) and/or hexamethylene diisocyanate (CAS Reg. No. 124-09-4) in coatings, films, molded articles, and thermoformed articles. The FCS is intended for use in contact with all food types, except alcoholic foods, under Conditions of Use B through H. [1] The FCS is not for use in contact with infant formula and human milk. Such uses were not included as part of the intended use of the substance in the FCN.

The Office of Pre-Market Additive Safety has determined that allowing this notification to become effective will not significantly affect the quality of the human environment and, therefore, an environmental impact statement (EIS) will not be prepared. This finding is based on information submitted by the notifier in an environmental assessment (EA), dated November 14, 2025. The EA was prepared in accordance with 21 CFR 25.40. The EA is incorporated by reference in this Finding of No Significant Impact (FONSI) and is briefly summarized below.

Food-contact articles containing the FCS are expected to be disposed by either by landfilling or incineration at municipal solid waste (MSW) combustors. Recycling is not anticipated. Because the FCS is compostable, food-contact articles produced from the FCS may be subject to disposal by composting. However, due to the current nationwide lack of suitable composting facilities, the FCS is not expected to be significantly disposed by composting. It is expected that due to EPA's regulations at 40 CFR Part 258, there will be no significant introduction of the FCS or its components into the environment resulting from land disposal of such articles. Incineration of food-contact articles containing the FCS will not significantly alter the emissions from properly operating MSW combustion facilities and will therefore not cause these facilities to threaten a violation of applicable emissions laws and regulations at 40 CFR Part 60 and/or relevant state and local laws. Based on market volume information provided in the confidential attachment to the EA, total annual emissions of greenhouse gases (GHG) resulting from disposal of items containing the FCS are expected to be below the 25,000 mT GHG reporting threshold described in 40 CFR 98.2. Therefore, no significant impacts are expected from incineration of the FCS at MSW combustion facilities.

Use of the FCS is not expected to result in a net increase in the use of energy and resources, because it is expected to replace, to a certain extent, other substances already in use. It is reasonable to expect that the manufacture of the FCS and its fabrication in food-contact articles will consume energy and resources in amounts comparable to the manufacture and use of materials already in use.

No mitigation measures are needed since no significant adverse environmental effects are expected from use and disposal of food-contact articles manufactured with the FCS, nor do we expect significant environmental impacts, which would necessitate alternative actions to those proposed in this FCN. The alternative to not allowing the FCN to become effective would be continued use of materials that the FCS would otherwise replace; therefore, this action would have no significant environmental impact.

[1] https://www.fda.gov/food/packaging-food-contact-substances-fcs/food-types-conditions-use-food-contact-substances

As evaluated in the EA, the proposed use of the FCS as described in FCN 2488 is not expected to significantly affect the human environment; therefore, an EIS will not be prepared.
