Analytical Results for PFAS in Infant Formula (FY2023-2025)
The data in table represent 312 samples of infant formulas tested for 30 PFAS analytes in FY2023-2025 as part of a special survey.
Analytical results are reported for all analytes. (a) (b) (c)

Analytical Results for PFAS in Infant Formula (FY2023-2025) (Detected PFAS only)

The data in this table represent 312 samples of infant formulas tested for 30 PFAS analytes in FY2023-2025 as part of a special survey.

Analytical results are reported only for those PFAS analytes for which there were detects. [a], [b], [c]

[a] Powder, Ready to Feed Liquids, and Concentrated Liquids were analyzed as sold. Results are reported as sold, where ppt = parts per trillion.

[b] The MDL and limits of quantification (LOQ) were determined from infant formula as sold using the methodology outlined in 40 C.F.R. pt. 136, app. B (2025), "Definition and Procedure for the Determination of the Method Detection Limit—Revision 2."

[c] Results below the MDL are reported as <MDL. Trace values (those greater than the MDL and less than the LOQ) are reported in italics.

Infant formula samples were collected as part of a special survey that consisted of a total of 344 infant formulas and toddler drinks. Data from
