Analytical Results for PFAS in Infant Formula (FY2026)

The data in this table represent 104 samples of powder infant formulas tested in FY2026 as part of the 2025 Supplemental Survey.
Analytical results in this table are only reported for PFOS. All other analytes were not detected in any sample.

[a] Powder formulas were analyzed as sold. Results are reported as sold in ppt (parts per trillion).
[b] The method detection limit (MDL) and limit of quantification (LOQ) were determined from infant formula as sold using the methodology outlined in 40 C.F.R. pt. 136, app. B (2025), "Definition and Procedure for the Determination of the Method Detection Limit—Revision 2."
[c] Results below the MDL are reported as <MDL. Trace values (those greater than the MDL and less than the LOQ) are reported in italics.

* Duplicate sample; also appears in the 2026 Mini Market Basket Survey.

Infant formula samples were numbered as they were received. Samples that consisted of duplicate lot numbers were not analyzed.
