SALMONELLA SAMPLING PLAN

PURPOSE:

To determine the presence of *Salmonella* in processed foods and soils/water used for the growth of foods intended for human consumption.

APPLICABILITY:

This sampling plan is applicable to the inspection of either a continuing series of production lots or to isolated lots consisting of an identifiable collection of process units (cans, bags, packages, or similar units). Additionally, the soil plan is for use during on-farm investigations requiring the sampling of soil for the presence of *Salmonella*. This plan is for use by FDA for regulatory purposes.

FOOD CATEGORIES:

Foods are listed in three categories based on the number of *Salmonella* hazards and whether a food is to be consumed by infants, the aged, or infirm.

The three defined *Salmonella* Hazards of foods are:
1. The food or an ingredient of the food is a significant potential source of *Salmonella*;
2. The manufacturing process does not include a controlled step that destroys *Salmonella*; and
3. The food has significant potential for microbiological growth if "abused" in distribution or by consumers.

Classification of Foods:

Foods have been classified into three food Categories for regulatory sampling purposes. The foods are listed in the Categories by Product Code sequence.

NOTE: For products not listed, check with your supervisor. The District will request categorization from the Office of Field Programs/Center for Food Safety and Applied Nutrition (HFS-600), or, when time is of essence, the District will make the categorization and obtain later concurrence from CFSAN.

Category I

This includes all foods that would normally be in Category II except that they are intended for consumption by the aged, the infirm, and infants.

Category II

This includes the foods that would not normally be subjected to a process lethal to *Salmonella* between the time of sampling and consumption. Examples are as follows:

<table>
<thead>
<tr>
<th>PRODUCT CODE</th>
<th>FOOD ITEM</th>
</tr>
</thead>
<tbody>
<tr>
<td>03</td>
<td>Bread, rolls, buns, sugared breads, crackers, custard and cream filled sweet goods</td>
</tr>
<tr>
<td>05</td>
<td>Breakfast cereals, ready to eat</td>
</tr>
<tr>
<td>07</td>
<td>Pretzels, chips and specialty items</td>
</tr>
<tr>
<td>09</td>
<td>Butter and butter products; pasteurized milk and raw fluid milk and fluid milk products for consumption; pasteurized and unpasteurized concentrated liquid milk products for consumption; dried milk and dried milk products for consumption</td>
</tr>
<tr>
<td>12</td>
<td>Cheese and Cheese products</td>
</tr>
<tr>
<td>13</td>
<td>Ice cream from pasteurized milk and related products that have been pasteurized; raw ice cream mix and related unpasteurized products for consumption.</td>
</tr>
<tr>
<td>14</td>
<td>Pasteurized and unpasteurized imitation dairy products for consumption</td>
</tr>
</tbody>
</table>
15 Pasteurized eggs, egg products from pasteurized eggs; unpasteurized eggs and egg products from unpasteurized eggs for consumption without further cooking

16 Canned and cured fish, vertebrates; other fish products; fresh and frozen raw oysters and raw clams, shellfish and crustacean products; smoked fish, shellfish and crustaceans for consumption

17 Unflavored gelatin

20-22 Fresh, frozen and canned fruits and juices, concentrates and nectars; dried fruit for consumption; jams, jellies, preserves and butters

23 Nuts and nut products for consumption

26 Oils consumed directly without further processing and oleomargarine

27 Dressings and condiments (including mayonnaise) salad dressing and vinegar

28 Spices including salt; flavors and extracts

29 Soft drinks and water

30 Beverage bases

31 Coffee and tea

33 Chewing gum and candy

34 Chocolate and cocoa products

35 Pudding mixes not cooked prior to consumption, gelatin products

36 Syrups, sugars and honey

38 Soups

39 Prepared salads

Category III

This includes the following foods that would normally be subjected to a process lethal to Salmonella between the time of sampling and consumption. Examples are as follows:

<table>
<thead>
<tr>
<th>PRODUCT CODE</th>
<th>FOOD ITEM</th>
</tr>
</thead>
<tbody>
<tr>
<td>02</td>
<td>Whole grain, processed grain and starch products for human use</td>
</tr>
<tr>
<td>04</td>
<td>Macaroni and noodle products</td>
</tr>
<tr>
<td>16</td>
<td>Fresh and frozen fish; vertebrates (except that eaten raw); fresh and frozen shellfish and crustaceans (except raw oysters and raw clams for consumption); other aquatic animals (including frog legs)</td>
</tr>
<tr>
<td>24</td>
<td>Fresh vegetables, frozen vegetables, dried vegetables, cured and processed vegetable products normally cooked before consumption</td>
</tr>
<tr>
<td>26</td>
<td>Vegetable oils, oil stock and vegetable shortening</td>
</tr>
<tr>
<td>35</td>
<td>Dry dessert and pudding mixes that are cooked prior to consumption</td>
</tr>
<tr>
<td>37</td>
<td>Frozen dinners, multiple food dinners</td>
</tr>
<tr>
<td>45-46</td>
<td>Food chemicals (direct additives)</td>
</tr>
</tbody>
</table>

SAMPLE COLLECTION

Each sub will consist of a minimum of 100 g (approx. 3.53 oz). The usual subsample is a consumer size container of a product. Subsamples should be obtained at random to insure that the total sample is representative of the lot. When a lot consists of identifiable subsamples (e.g., different codes), sub samples should be obtained from subsamples in the proportion that the subsamples are to the whole lot.
More than one subsample may be collected from large institutional or bulk containers when the number of sub samples required exceeds the number of containers in the lot. A subsample will consist of more than one container when the lot consists of containers smaller than 100 g (e.g., 4 - 25 g containers is a subsample).

When a sample is collected by transferring it to sample containers, a sample control must be submitted which consists of an empty sample container that is exposed to the same conditions under which the sample is collected. See IOM 4.3.6.2 and 4.3.6.5 on controls. Use aseptic technique when sampling from bulk containers.

**SAMPLE SIZE**

The following sample sizes also apply to the finished product portion of in-line samples when analyzed for Salmonella. Each subsample will consist of at least 100 gm (approx 3.5 oz).

The 702(b) [21 U.S.C. 372(b)] portion is included in these subsamples, however all subs must be collected for proper analysis. Do not reduce the number of subsamples when collecting import samples.

<table>
<thead>
<tr>
<th>FOOD CATEGORY</th>
<th>NUMBER OF SAMPLE UNITS (SUBS)</th>
</tr>

<tbody>
<tr>
<td>I</td>
<td>60</td>
</tr>
<tr>
<td>II</td>
<td>30</td>
</tr>
<tr>
<td>III</td>
<td>15</td>
</tr>
</tbody>
</table>

**SAMPLE SUBMISSION**

Submit all samples collected to your district's microbiological servicing laboratory unless directed otherwise by your supervisor or assignment. See IOM 4.5.5.2.

**FARM INVESTIGATIONS – SOIL AND WATER SAMPLES**

**Soil Samples**

When conducting an investigation at a farm that was implicated as the source of produce contaminated with *Salmonella*, and the crop is exposed to soil or water splash from the soil, such as leafy greens, cantaloupe, or cucumbers, soil samples may yield important information as to how the produce was contaminated, especially if a soil amendment such as animal manure or compost was used, or if the crops on that field were rotated and animals grazed on the land previously.

Unless specific instructions were provided by the office issuing the assignment, generally 5 sub samples are collected per field, one from the growing area on each corner, and one near the center. Additional samples may be collected based on observations, such as animal incursion, areas where water may drain, portions of the field susceptible to road dust or runoff, etc. Each field should be issued a separate sample number for ease of identification and review of data. A 1000 ml whirlpack should be filled with soil from a depth of 1 to 3 inches using a sterile scoop and double bagged. Take a photograph of each area where samples are collected and indicate the location and subsample number on a diagram of the field.

Soil samples should be submitted to the lab at 4°C (39°F) or below.

**Water Samples**

If specialized equipment such as a peristaltic pump are not available, collect water in a sterile, 1000 ml Nalgene sample bottle from wells and surface water. When collecting a surface water sample, a sterile pipette with a re-usable suction bulb is recommended. Using the end of the pipette, stir the surface of the sediment until the water becomes cloudy and then collect this water. *Salmonella* may form a biofilm or colonize sediments and be recovered well past the outbreak period.

Water samples should be submitted to the lab at 4 °C (39 °F) or below.

Environmental samples will be submitted as Investigational Samples (INV).
SAMPLING SCHEDULE FOR CANNED AND ACIDIFIED FOODS

Canned Foods

Field Examination

1. At the beginning of the inspection, conduct visual exams of warehouse stock for evidence of abnormal cans including swollen and leaking cans, wet cases, swarms of fruit flies around isolated pallets, etc.
2. If the visual exam or inspectional evidence indicates possible problems, such as under processed lots, lots with questionable seam integrity, or abnormal cans, exam the affected lots. Preferably field examine lots that have been warehoused at least 14 days.
3. A lot to be examined will be one production code.
4. Follow the chart below for the field examination. If abnormal containers are found, always collect an official sample of the lot, if possible. For lots with abnormal cans collect an investigational sample ONLY when there is not enough product available to collect an official sample. In all cases, include on the collection report: the lot size, the number of containers examined, and the number of abnormal containers found by type (e.g., hard swells).
5. The chart provides instructions on the number of cans/cases to examine depending on the size of the lot. When the maximum number of containers / cases have been examined for the specified lot size, collect a sample if one or more abnormal containers are found. The exam can be discontinued early based on the number of abnormal containers found. For example, if examining a lot consisting of 3409 or more cans, if 11 abnormal cans are found after examining 1000 cans, discontinue the exam and collect a sample

   a. Flippers. Only one end is slack or slightly bulged and the end remains flat if pressed in. Cans which bulge when sharply and squarely struck end-down on a flat surface are flippers, provided that the bulged end remains flat when pressed. Flippers result from a lack of vacuum.

   b. Springers. One end of a can bulges. Manual pressure on the bulged end forces the opposite end out or the same end will spring out with release of pressure. If both ends bulge, but only one will remain flat when pressed, the can is a springer. Springers result from moderate positive pressure in the can. Buckling or extensive denting of the side wall may produce a springer.

   c. Swells. Both ends of the can are bulged. Neither end will remain flat without pressure. Soft swells yield to manual pressure, but no impression can be made manually on hard swells. Swells result from positive pressure in the can usually because of spoilage of the contents. Some swells, especially in acid products, may result from chemical reaction between the contents and the container.

NOTE: Other abnormalities or defects, such as visibly leaking cans, severe dents around seams, gross seam defects, severely rusted containers should be reported on C/R, (with numbers of cans defective cans observed) but not counted as “abnormal containers” for the purposes of the sequential field examination. Do not collect leakers, but report the number observed. It may be necessary to collect samples of other defects (e.g. seam defects) to support observations and document the severity of the defects. In some cases photographs may be a suitable substitute for collection of physical samples.

If a sample is collected, identify on the C/R, by sub-sample number, the condition of each container in the sample (e.g., sub-sample 1 - flipper; sub-sample 2 - hard swell; - sub-sample x - normal). Report the results of the warehouse stock examination in the EIR and in FACTS. See IOM 5.1.5.3

Special Sample Handling: If you are shipping swollen cans, double bag and ground ship the sample. If the cans are moderately swollen or worse you should ship the sample with ice packs.

When the ‘Reason for Collection’ on the Collection Report includes can seam analysis, the CSO shall collect the can seam specifications for the cans in the sample. This is specific to the can manufacturer and can size collected in the sample. The can seam specifications will be submitted in the FD-525 along with the Collection Report for the servicing laboratory.
1. Sample Size for Samples Collected as a Result of a Field Exam:
   a. Official Sample
      The sample will consist of all abnormal containers and the number of normal cans specified under “2. Official Samples” below (e.g., if 8 abnormal containers are observed during the examination of a lot containing 696/2 lb. cans the sample will consist of the 8 abnormal cans and 48 normal cans, collected 2 cans from each of 24 cases). Open additional cases, if necessary to meet this requirement. This will provide enough product for complete analysis, including: can seam, incubation, aerobic and anaerobic growth, pH and water. Note that the sample size given for normal cans includes the 702(b) portion.
   b. Investigational Sample
      Samples for laboratory examination will consist of all abnormal and 12 normal containers.

2. Other Sampling
   Official Samples
   a. Filth, Micro, etc. (Includes 702(b) [21U.S.C.372 (b)] portion)

Collect each subsample to duplicate from a separate case, if possible. Mark subs 1a, 1b, 2a, 2b, etc. Collect as follows:

<table>
<thead>
<tr>
<th>NET WEIGHT</th>
<th>SIZE OF LOT</th>
<th>MIN TOTAL CANS</th>
<th>CANS/CASE</th>
</tr>
</thead>
<tbody>
<tr>
<td>906 gm (2 lbs.) and smaller</td>
<td>Up to 50 cases</td>
<td>48</td>
<td>2 from 24</td>
</tr>
<tr>
<td></td>
<td>More than 50 cases</td>
<td>96</td>
<td>2 from 48</td>
</tr>
<tr>
<td>Over 906 gm (2 lbs)</td>
<td>Up to 600 cases</td>
<td>48</td>
<td>2 from 24</td>
</tr>
<tr>
<td></td>
<td>More than 600 cases</td>
<td>72</td>
<td>2 from 36</td>
</tr>
</tbody>
</table>

b. Standards Assay (Includes 702(b) portion)
   NOTE: Sample sizes listed below are based upon the requirements of the Standards (21 CFR 145.3) When sampling products which are likely to be non-uniform throughout the lot because of variations from standards of quality, identity, fill-of-container, grade, etc., collect each subsample in triplicate from a separate case. Mark subs 1a, 1b, 1c, 2a, 2b, 2c, etc. Collect as follows:
<table>
<thead>
<tr>
<th>NET WEIGHT</th>
<th>NUMBER OF CANS OR PACKAGES</th>
<th>MIN TOTAL CANS</th>
<th>CANS/CASE</th>

</tbody>
</table>

Acidified Foods (Metal or Glass)

A lot is defined as one production code.

Samples must be collected randomly from the entire lot. **Sample size does not include 702(b) portion.**

1. # 10 size containers - Randomly select 1 normal container from each of 12 randomly selected cases (if available) in the lot.
2. # 2 and smaller - Randomly select 2 normal containers from each of 12 randomly selected cases (if available) in the lot. Sample size is 24 containers.

For acidified products, the equilibrium pH determines whether the product will support organisms of public health significance. Spoilage in such products is usually due to inadequate heat treatment to kill spoilage organisms. Spoilage may be significant because high numbers of microorganisms may affect the adequacy of the thermal process. Molds and some bacteria can grow in an acid environment and actually utilize acid as one of their nutrients; and thus, raise the pH to a level above 4.6 where *Clostridium botulinum* or other toxin-producing microorganisms can grow.

Microbial spoilage can be detected by observing swollen lids on jars or swollen can ends. The liquid may be turbid and a whitish deposit may be visible on the product or in the bottom of the jar. See the Guide to Inspection of Acidified Food Manufacturers for additional information: [http://www.fda.gov/ora/inspect_ref/igs/iglist.html](http://www.fda.gov/ora/inspect_ref/igs/iglist.html)

If you observe abnormal containers conduct an examination following the sequential plan provided for canned foods. Collect all abnormal containers (up to a maximum of 24) in addition to the normal containers collected for pH determination referenced in the table above. Indicate on the C/R the total number of containers examined and the number of each type of abnormality and defect observed. Also indicate the estimated percentage of abnormal containers in the lot.
PESTICIDE SAMPLES
(includes 702(b) portion)
DO NOT FUMIGATE PESTICIDE SAMPLES

INTRODUCTION
The objectives of FDA's pesticide monitoring program are to gather information on levels and incidences of pesticide residues in the nation's food supply and to initiate enforcement actions against shipments of foods and feeds found to contain illegal pesticide residues. To meet both objectives, it is necessary to collect samples of foods and feeds for pesticide residue analysis. This section describes procedures for the collection of raw agricultural and processed commodity samples. These procedures apply to both domestic and import arenas. Additionally, a separate set of procedures for collecting samples in conjunction with special investigations, such as samples collected to determine levels of pesticide residues in soil, water, and growing crops, is included.

For pesticide samples, the laboratory will maintain a portion of the composited sample as the 702(b) [21U.S.C.372(b)] portion.

Pesticide sample sizes no longer differentiate between Surveillance and Compliance Samples. All pesticide samples will be collected as directed below. Remember to include the state and county or country of origin in the Flag. See IOM 4.4.10.1.8.

For appraisal purposes, you must Flag each Domestic as to the basis for sampling in accordance with the definitions below.

### Pesticide Compliance Sample
Collected on a selective basis as a result of inspectional or other evidence of suspected misuse of a pesticide on a food or feed commodity or as a follow-up to a "Pesticide Surveillance Sample" that was found to contain actionable levels of pesticide residues. Flag "Pesticide Compliance".

### Pesticide Surveillance Sample
Collected on an objective basis where there is no evidence or suspicion of pesticide misuse on a food or feed commodity. Flag "Pesticide Surveillance".

Districts have the option to collect 1 intact shipping case of fresh produce from packing sheds or large produce warehouses. The one case must meet the minimum sample size specified below. This "one case" option may be used on any import sample or on domestic Pesticide Surveillance Samples, if the collector can be assured that the "one case" collected is representative of the lot or field. If the collector is not assured of this, collect the samples according to the instructions below. This "one case" sampling does not apply to large items such as melons.

**NOTE:** If "one case" option is used for surveillance samples of domestic produce, describe in the Remarks Section of the CR, the basis for determining that the sample is representative of the lot or field.

### Plant products: description of primary samples and minimum size of laboratory samples (total weight of all subs or units collected)

#### Primary Food Commodities of Plant Origin

1. **All fresh fruits, All fresh vegetables, Frozen bulk produce (not retail) except dry pulses**
   1.1 **small sized products**
      - units generally < 25 g
      - berries
      - peas
      - olives
   
   1.2 **medium sized products**
      - units generally 25 - 250 g
      - apples
      - oranges
      - corn on the cob
      - potatoes
   
   1.3 **large sized products**
      - units generally > 250 g
      - cabbages
      - lettuce
      - cucumbers
      - grapes (bunches, except for sulfites)
      - sweet potatoes
   
2. **Pulses, Cereal grains,**
   - soy beans, peas, lentils
   - rice, wheat (except from rail carloads)
   - coconuts
   - (except coconuts)
   - 1 kg (2.2 lbs)
   - 1 kg (2.2 lbs)
   - 1 kg (2.2 lbs)
   - 5 units
   - 0.5 kg (1.1 lb)
   - 0.5 kg (1.1 lb)

3. **Tree nuts,**
   - rice, wheat (except from rail carloads)
   - coconuts
   - (except coconuts)
   - 5 units
   - 0.5 kg (1.1 lb)
   - 0.5 kg (1.1 lb)

4. **Oilseeds,**
   - peanuts
   - coffee beans
   - 0.5 kg (1.1 lb)
   - 0.5 kg (1.1 lb)

5. **Seeds for beverages and sweets**, fresh parsley
   - with sampling device
   - 0.5 kg (1.1 lb)
   - 0.2 kg (0.5 lb)
   - 0.1 kg (0.25 lb)

**Herbs (for dried herbs see section 5 of this Table)**

**Spices**

---

**INVESTIGATIONS OPERATIONS MANUAL 2015**

**SAMPLE SCHEDULE CHART 3**

197
Commodity classification | Examples | Nature of primary samples to be taken | Minimum size of each laboratory sample
--- | --- | --- | ---
Primary Animal Feed Commodities

4. Primary feed commodities of plant origin

4.1 Legume animal feeds, and other forages and fodders

whole units, or units taken with sampling device

1 kg (2.2 lbs)

(from least 10 units)

4.2 Straw, hay and other dried products

whole units, or units taken with sampling device

0.5 kg (1.1 lbs)

(at least 10 units)

See IOM Sample Schedule Chart 4, Wheat Carload Sampling for guidance in the collection of samples by trier from railcars and trucks.

Processed Foods of Plant Origin

5. Secondary food commodities of plant origin, dried fruits, vegetables, herbs, milled cereal products

Derived products of plant origin, teas, vegetable oils, juices, by-products for animal feed and miscellaneous products

Manufactured foods (single ingredient) of plant origin,

Manufactured foods (multi-ingredient) of plant origin, including products with ingredients of animal origin where the

ingredient(s) of plant origin predominate(s), and breads

5.1 Products of high unit value

packages or units taken with a sampling device

0.1 kg* (0.25 lb)

5.2 Solid products of low bulk density

Hops, Tea

packaged units, or units taken with a sampling device

0.2 kg (0.5 lbs)

5.3 Other solid products

bread, flour, apple pomace, dried fruit

packages or other whole units, or units taken with a sampling device

0.5 kg (1.1 lbs)

5.4 Liquid products

vegetable oils, juices

packaged units, or units taken with a sampling device

0.5 L or 0.5 kg

* A smaller laboratory sample may be taken from a product of exceptionally high value but the reason for doing so should be noted in the collection report.

Eggs and Dairy Products

6. Poultry eggs

6.1 Eggs, except quail and similar

whole eggs

12 whole chicken eggs,

6 whole goose or duck eggs

6.2 Eggs, quail and similar

whole eggs

24 whole eggs

7. Milks

whole unit(s), or unit(s) taken with a sampling device

0.5 L

Processed Foods of Animal Origin

8. Secondary food commodities of animal origin, skimmed milks, evaporated milks and milk powders

Derived edible products of animal origin, milk fats, butters, butter oils, creams, cream powders, caseins, etc.

Manufactured food (single ingredient) of animal origin,

Manufactured food (multi-ingredient) of animal origin, (including products with ingredients of animal origin where the

ingredient(s) of animal origin predominate(s))

8.1 Liquid milk, milk powders,

packaged unit(s), or unit(s) taken with a sampling device (solid)

0.5 L (liquid) or 0.5 kg

8.2 Butter and butter oils (butter,

whey butter, low fat spreads

containing butter fat, anhydrous

butter oil, anhydrous milk fat)

whole or parts of packaged unit(s), or unit(s) taken with a sampling device

0.2 kg or 0.2 L

8.3 Cheeses, including processed

cheeses

Whole unit(s) or units taken aseptically with a sampling device

0.5 kg

units < 0.3 kg whole unit(s)

0.3 kg

Note. Cheeses with a circular base should be sampled by making two cuts radiating from the center. Cheeses with a rectangular base should be sampled by making two cuts parallel to the sides.

8.4 Liquid, frozen or dried egg products

unit(s) taken aseptically with a sampling device

0.5 kg
9. GRAPES FOR SULFITES

Collect approximately 900 - 1800 g (2 - 4 lbs) of grapes [10/100 - 200 g (1/4 to 1/2 lb) subs]. Each subsample will consist of individual grapes, not bunches, and will be collected from different lugs (cases) on as many different pallets in the lot as possible. No grapes that are damaged during the sampling procedure should be included in the sample. However, grapes with damage prior to sampling may be included in the sample.

If sulfiting pads are present, grapes sampled should be selected from areas closest to and directly under the pad.

Monitoring activities should be focused upon lots of grapes with the highest potential for violative sulfite residues.

Direct efforts to lots of grapes sulfited through fumigation or to lots with multiple fumigations especially towards the end of the harvesting season and also to lots with significant numbers of damaged grapes (split, crushed, or unusually wet, if such damage is apparent).

Sample lots of grapes sulfited through the use of sulfiting pads, with or without additional fumigation. If at all possible, sample lots subjected to the following conditions, which could cause high sulfite residues:

- Lots subjected to un-refrigerated storage of 2 or more hours during warm weather.
- Unusual shipping conditions (ships at sea during heavy storms).
- Lots with significant numbers of damaged grapes.
- Lots containing evidence of sulfite pad damage sufficient to cause spilling of sulfiting agent onto grapes.

Special Sample Handling

Place sample in tightly closed airtight glass mason jar(s) or sealed plastic bag(s). Although no effort should be made to commingle subsamples, more than one subsample may be placed in the same container for shipping convenience.

Appropriate cooling procedures are:

Place samples in shipping container or cooler with sufficient ice or other refrigerant to keep sample refrigerated until arrival at the laboratory. Sample should be placed immediately in a refrigerator at or below 7 degrees C. If sample is not to be analyzed within a few hours, the sample should be placed in a freezer, which is maintained at or below -20 degrees C.

Or, if the sample is frozen, place the sample in a container with sufficient dry ice to keep the sample frozen until arrival at the lab. The sample should then be placed in freezer upon arrival at the laboratory.

1. FISH AND SHELLFISH PRODUCTS

NOTE: THIS SAMPLE SIZE FURNISHES SUFFICIENT FISH FOR HEAVY METAL ANALYSIS.

Packaged Fish, fresh, frozen, smoked, cured, or shellfish (except oysters)
Collect 12 subs - minimum sub size is 453 g (1 lb)

Bulk Fish - .453 - 1.35 kg (1 - 3 lb)/fish
Collect 12 subs, each sub to consist of 453 g (1 lb) of edible fish

Bulk Shellfish (except oysters)
Collect 12 - 453 g (1 lb) subs

Canned Fish and Shellfish Products (except oysters)
Collect 12 subs - 5 cans per sub

Other Fish and Shellfish Products
Oysters - Collect 12 1 pint subs

Fish Flour and Meal
Follow the guidance in section 5 above.

SWORDFISH FOR HEAVY METALS

These sample sizes must be used whenever sampling swordfish, either for audit, surveillance, or compliance purposes.

Whole Fish (dressed, head removed)
Characterize lot in terms of fish sizes, i.e., small, medium, and large. The following dressed weight ranges are used for classification:

Small Fish - Weighs less than 36.4 kg (80 lbs)

Medium Fish - Weighs 36.4 - 54.5 kg (80 - 120 lbs)

Large Fish - Weighs more than 54.5 kg (120 lbs)

For lots consisting of 12 or more fish, the representative sample to be collected will be determined by the following formula:

\[
ns = \frac{(n)(N)}{N}
\]

\[ns = \text{the number of fish in a given weight range from which subsamples must be taken}
\]

\[n = \text{total number of subsamples to be collected from the lot. (In using this formula n will always equal 12)}
\]

\[N = \text{the total number of fish in the lot}
\]

Example: If a lot consists of 25 fish and is characterized as: 5 small fish [less than 36.4 kg (80 lbs)], 15 medium fish [36.4 - 54.5 kg (80 - 120 lbs)], and 5 large fish [greater than 54.5 kg (129 lbs)], the sample should be collected as follows:

small fish \[
\frac{(12)}{25} = 2.4 = 2
\]

medium fish \[
\frac{(12)(15)}{25} = 7.2 = 7
\]
For leafy vegetables, such as lettuce, cabbage, etc.: INV
Samples collected in the growing field should be representative of local commercial harvesting practices. If the local practice is to strip outer leaves at the time of harvest, this practice should be followed when collecting field samples. In head lettuce, for example, the lettuce may be packed directly into shipping cartons in the field, in which case 6 or 8 outer leaves are left on the head to be removed at the retail outlet. In other instances, each head is stripped of 2 or 3 outer leaves and individually wrapped in plastic, placed in shipping cartons, and the consumer receives the produce in this condition. Describe sampling method on C/R and describe how packing shed handles produce prior to shipping (e.g., washing, waxing, stripping, etc.).

Soil Samples
Collect soil samples from fields according to the following 3x3 grid diagram:

```
  a b c
1 o o o
2 o o o
3 o o o
```

Sample at the 9 locations indicated by the "o". If the field being sampled is very large, you may have to sample it using a 4x4, 5x5, or even larger grid pattern.

Subs are to be placed in clean quart glass jars, which have been washed in water, rinsed in methanol, and air dried. If methanol is not available, use washed, air dried jars and submit an empty jar as a control. Note on CR that jars were or were not rinsed with methanol.

Obtain two "6 in" deep plugs (1-2 in. in diameter from each location. Place two plugs from each location in cleaned glass jars, place clean aluminum foil over top of jar and seal with screw cap.

Soil samples should be submitted to the lab at 4° C (39° F) or below.

Water Samples - Collect 3 quarts of water from the same sampling source (e.g., faucet, stream, lake, etc.) and place in cleaned, washed and methanol rinsed jars as described under "Soil Samples".

Submit water samples to lab at 4° C (39° F) or below.

GENERAL

Official Samples shall be collected whenever feasible unless they are not required to accomplish the objective of the assignment. Investigational Samples shall be collected only when Official Samples are not readily available.

Consult with your supervisor in cases of doubt as to sample cost, size, or collection technique. When collecting samples in glass jars, line the lids with aluminum foil which has been certified by the laboratory as contaminant free or use Teflon lined lids.
If shipment of shell eggs is required and breakage may result during transit, subs may be broken, shells discarded, and liquid magma collected in clean glass jars. Each sub jar should be properly identified.

Samples collected at Packing Sheds should be representative of the produce as shipped in commerce. DO NOT strip outer leaves from subs collected at packing sheds from bulk lots, shipping cartons ready for shipment, in-transit lots or at final destination. If the packing shed practice is to strip outer leaves prior to shipment, follow this practice when collecting the samples. Describe the sampling method on the C/R.

DO NOT USE magic markers, etc. to identify sub bags, because the ink may affect assay results. Use stick on labels to identify sub bags.

Collect samples in the container in which the dealer is packaging the product. If the dealer is packaging the product in plastic bags, collect sample in these bags. If the firm is not packing the product, collect the samples in paper bags, cardboard cartons, etc. Do not use plastic bags as this may interfere with the analysis, unless the bags are certified as contaminant free by your district laboratory.

Samples must be delivered as promptly as possible to the laboratory if regulatory action is to be taken against actionable lots.

Hold samples in cold storage until ready to be shipped or delivered to the laboratory. If the sample is of a hard fruit or vegetable (such as apples, pears, butternut squash), and is shipped overnight delivery, it can be shipped to the laboratory unrefrigerated, but the FDA 525 should direct refrigeration upon receipt.

Use aseptic technique, where applicable, when collecting samples of finished products from bulk containers.
WHEAT CARLOAD SAMPLING

I. SAMPLING NORMALCARS
CAUTION: WHEN USING A GRAIN PROBE, BE CAREFUL NOT TO CLOSE THE TRIER COMPARTMENT DOORS ON YOUR FINGERS. Collect samples only of specific assignment.

A. Equipment
1. Double tube compartmented trier, 60 in. long
2. Sampling cloth at least 60 in. long
3. 1000 ml plastic graduate
4. Paper bags or other suitable containers capable of holding more than one quart of sample and do not use canvas bags.
5. FDA Metal Car Seals for resealing railroad cars
6. Aluminum ladder
7. Block and tackle to open railcar door

B. Drawing Sample
Principal sources of grain samples are railcars, barges, and trucks. Draw 5 probes (in duplicate) for each sample taken as described below. However, if the sample is to be Field Examined, an initial sample of 5 probes drawn as indicated below will be sufficient.

Probe samples from railcars and trucks as follows:

Probe #1 - From Center of car
Probe #2 - From 3-5 feet back from door post toward end of the car and approximately 2 feet from the side of the car.
Probe #3 - From 3-5 feet from the same end of the car, but approximately 2 feet from the opposite side of car as Probe #2.
Probe #4 - Same as Probe #2, but opposite end of car.
Probe #5 - Same as Probe #3, but opposite end of car.

Sketches I and II below are alternatives showing the approximate sampling locations.

```
I  II
5  5
0  0
4  4
0  0
1  1
0  0
2  2
0  0
3  3
0  0
```

Insert trier in the grain at an angle of about 10° from the vertical, with the slot up and closed. Open slots. Give trier 2 or 3 short up and down motions, so that the openings will fill. Close slots (SEE CAUTION AT BEGINNING OF SCHEDULE), withdraw trier and carefully empty over sampling cloth. The cloth should be long enough to catch product from each compartment separately when you open the trier compartment doors; e.g. about 6 feet long.

C. Field Examination

Examine each pocket of the probe separately, looking for evidence of pink wheat, rodent pellets, insect damage and uneven loading or plugging. Note any insect infestation and record types of insects and whether live or dead. Count and report for each probe the number of rodent pellets, or rodent pellet fragments. Follow procedure in I.C.2 below. Count as pellets any that are sufficiently large to be readily identified by size, shape, surface coating, and/or presence of rodent hairs. Report the number of rodent pellets per sub. Measure the volume of each sub (probe) in quarts and calculate the average number of pellets per quart per I.C.2.a below. Place pellets from each sub in separate vials and submit with each wheat sub. Place each of the wheat subs in clean, paper bags.

Do not use canvas bags or take glass jars into railcars.

Substantially larger loads will require additional probing or larger samples taken from falling grain during loading or unloading operations.

Submit all suspect samples to laboratory for confirmatory analysis.

1. **Non-Violative Samples.** When field examination shows sample as non-violative, return grain to the car, unless collected for pesticide analysis. Report results in the Remarks Section of the C/R.

2. **Violative Samples**
   a. **Rodent Pellet Contamination.** The guideline for determining whether wheat is violative due to rodent contamination is: "9 mg or more rodent excreta pellets and/or fragments of rodent excreta pellets per kg of wheat."

   NOTE: Since it is impractical to weigh rodent pellets and wheat in the field, the following estimations can be used. Mouse pellets average approximately 8.7 mg each and a kilogram of wheat about 2.35 pints. This translates roughly as 1 pellet per quart of wheat or 1/2 pellet per pint.

   Where your field examination reveals one or more rodent pellets (or you can estimate that sufficient fragments of rodent pellets exist to equal one pellet) in a quart of wheat, take duplicate probes to furnish the claimants portion. Take the duplicate probes from the same locations as the original probes. Place the duplicates in separate containers and identify these to correspond with the original probes.

   b. **Pink Wheat.** Where evidence of pink wheat or other fungicide treated wheat is found, collect 15 probe samples. Take 5 probes from each end of the car and 5 probes from the center of the car. Submit the three 5-probe portions separately, using new clean containers.

   c. **Insect Damaged Kernels.** The violative status of these samples should be established by laboratory analysis. When any evidence of insect damage is
revealed by cursory examination, collect duplicate samples and submit for laboratory analysis.
3. Resealing Cars See IOM 4.3.4.
4. Procedures for Actionable Cars. If field examination reveals an average of one or more rodent pellets per quart or gross evidence of insect-damaged kernels, evidence of plugging, or "pink wheat" contamination, determine any movement of the car or other disposition of the grain and notify your supervisor immediately.

5. Preparation of Sample for Laboratory Analysis. If a sample can be delivered to the laboratory promptly and confirmatory analysis handled expeditiously, freezing of the FDA subsamples is not necessary. The claimant's (702(b)) portion of the sample, however, must be frozen. It is preferable to freeze the subsamples in paper bags. If a freezer is not available, the subsamples (in paper bags) can be placed in a cooler box with dry ice. Do not use glass jars with dry ice. Officially seal all subsamples. If dry ice is used, you must label the shipping container as described in IOM 4.5.5.8.6. See Exhibit 4-19. Indicate frozen storage on the FDA 525.

D. Special Reporting
Submit an Analyst Worksheet (FDA-431) for each sample analyzed and found in compliance. See IOM 4.3.7.1. If field examination shows the sample is possibly actionable, report analytical results in Remarks Section of the C/R.

II. SAMPLING PLUGGED CAR
If uneven loading, layering or "plugging" is suspected, contact your supervisor as to whether to sample or not. A 'plugged' car is a railcar, truck, or barge load of grain where the contamination is suspected of being in only one portion or layer of grain. Plugging is usually the deliberate mixing of violative grain below the surface or in isolated pockets of grain.

A. Equipment
Equipment needed is the same as in 1.A. above except:

1. Double tube grain probe must have individual compartments permanently separated.
2. Small containers of sufficient size to hold the contents of each compartment of each grain probe.

B. Procedure
1. In the Remarks Section of the C/R, draw a diagram showing actual "plugging" pattern suspected.
2. Each sample consists of thirty probes of grain with each probe compartment maintained as a separate sub. Each sample thus consists of 300-330 subs depending on whether a 10 or 11 compartment probe is used and if grain depth is sufficient to insert the probe to fully cover all compartments of the probe.
3. Probe each load and number the probes as follows:
   1 4 7 10 13 16 19 22 25 28
   2 5 8 11 14 17 20 23 26 29
   3 6 9 12 15 18 21 24 27 30
4. Identify the subs by probe number plus compartment letter starting with small "a" as the compartment nearest the tip of the probe.

Example:

5. Submit sample to your district's servicing laboratory. See IOM 4.5.5.2.
IMPORTED WHITEFISH SAMPLING SCHEDULE

GENERAL

This Sample Schedule objective is to maintain import lot integrity from time of importation thru FDA inspection or examination and final action.

Shipments will be special manifested from non-lab ports to DO cities and other cities designated by the DD as FDA inspection points. These shipments will arrive in Customs bonded trucks under seal applied by Customs at the port of entry. Customs Entry documents and commercial invoice will accompany each shipment. The commercial invoice contains a description of the lots in the shipment and will serve as a guide in the selection of the lots to be sampled.

1. Special Manifested Shipments:
   a. Determine if seals are intact and record seal number.
   b. FDA metal seals may be broken and lots checked against invoice.
   c. Customs seals may be broken only if authorized by Customs.
   d. Lots which are not to be examined will be released by completing the "MAY PROCEED" block of the FDA-701.
   e. Sample lots to be examined by using either the Single or Sequential Sampling Plan depending on whether examination is made at the DO Lab or at the dock. The Sequential Plan can only be used where additional fish are immediately available for cutting.

2. Definition of a Lot & Selection for Examination.
   a. A lot is defined as "Each group of fish of a distinct size, listed in the invoice as from a distinct lake, will be considered as a separate lot. Where an invoice does not list lakes of origin of boxes of fish in a shipment, fish of the same size and kind will be considered to comprise a single lot. When the size of the fish or lakes of origin in a shipment are not specified, the shipment will be treated as a single lot."
   b. Limit sampling to lots containing 5 or more boxes unless deliberate splitting up of lots is suspected.
   c. Basis for Sampling. Select lots for sampling on either a "selective" or "objective" (random) basis. The criteria in selective sampling may be prior knowledge or suspicion that fish listed as from a given lake are likely to have excess cysts; that the shipper has been known to manipulate shipments; etc. Regardless of the reason for selective sampling, record the basis for sampling each lot in your examination report. Simply list the basis as "selective" or "objective" next to the results of each lot sampled.

   d. Normally, select boxes in a lot for sampling at random. However, where there's evidence of layering, selectively sample the suspect boxes.

3. Sampling Schedule.
   a. Imported samples of whitefish & related fish for parasites. The sampling schedules estimate lot quality more precisely, thereby reducing the likelihood of passing a lot which should be detained, or vice versa, due to an inadequate sample.
   SCHEDULE A below is a single sample plan for use in collecting samples for examination in the district lab or other location where it is impossible or undesirable to return and obtain additional fish.
   SCHEDULE B below contains sequential sampling plans for use when the exam is made at a customs office or a carrier's dock where you have immediate access to the lot and can obtain additional fish, if necessary.

   The sequential plan for lots of 20 to 100 boxes is presented in tabular form. The sequential sample plan for lots of 100 or more boxes is presented in a sampling chart. For small lots of 5-20 boxes, a sequential sample plan is not feasible. All import sampling plans are based on lot size and the sizes of the fish in the lot. When lots are very good or very poor quality, in terms of cyst infestation, double sample plans require a smaller sample size on the average than single sampling plans, to reach a decision.

   b. Domestic Samples for Parasites.
      i. For Laboratory Examination. Lots of 11 or more boxes; Collect at least 25 fish from a representative number of boxes. For small lots, under 11 boxes; Collect 12 fish from a representative number of boxes.
      ii. For Examination in Other Than Laboratory. Cut a preliminary sample in accordance with the appropriate double sampling plan, Schedule B. Cut the additional sample where indicated or bring the additional sample to the laboratory for examination.

SCHEDULE A - SINGLE SAMPLE PLAN

<table>
<thead>
<tr>
<th>Number of Boxes in Lots</th>
<th>NUMBER OF KG'S (POUNDS) IN A SAMPLE 1/</th>
<th>Jumbo or Large 2/</th>
<th>Medium 2/</th>
<th>Small 2/</th>
</tr>
</thead>
<tbody>
<tr>
<td>5 - 19 boxes</td>
<td>12.7 kg (28lbs)</td>
<td>10.5 kg (23lbs)</td>
<td>7.3 kg (16lbs)</td>
<td></td>

**NOTE:** Containers for samples of unprocessed, intact nuts, seeds, or grains must be sufficiently porous to provide for dissipation of moisture produced by respiration of the nut, seed, or grain.

*To be collected from as many random sites in the lot as possible. For surveillance samples, you may combine subs prior to shipping to the laboratory. For compliance samples, you must maintain sub integrity.

**Optional sampling program for seeds or dried fruit with a low incidence of contamination. Take initial 10 x 454 g (1 lb) sample. If any aflatoxin is detected, resample 50 x 454 g (1 lb) sample for determination of contamination level on which to base regulatory judgment.
CANNED FRUIT - FILL OF CONTAINER - AUTHENTIC PACK

Collect samples only on a specific assignment or during inspections when it appears that the firm is not filling the containers to capacity.

   a. Remove 72 cans, 3 at a time, from packing line after fruit has been added and before syruping.
   b. Mark 24 cans with the sub numbers A-1, A-2, A-3, etc.; 24 cans with sub numbers B-1, B-2, B-3; and 24 cans with sub numbers C-1, C-2, C-3, etc. See IOM 4.5.2.3.
   c. Drain water from the "B" subs by inverting each can for 10 seconds, holding the fruit so it doesn't fall out.
   d. Obtain gross weight of each can and record data for each series of sub on 3 separate FDA-485 - Field Weight Sheets.
   e. Add additional fruit of the same kind and style to the "C" subs until the cans are filled to capacity. Do not tamp the contents or crush the fruit.
   f. Record the number of fruit pieces added where the size of the fruit makes the procedure reasonable. Do not make time consuming counts of small pieces of fruit or berries.
   g. Obtain the gross weight of the "C" subs after additional fruit is added and record on "C" series Field Weight Sheet.
   h. Return all 72 cans to the filling line for syruping, exhausting, sealing, etc. in normal cannery operation.
   i. Remove cans after cooking and cooling.
   j. Identify cans with a single INV Sample number.
   k. Attach FDA-485 - Field Weight Sheets to C/R.

2. OFFICIAL SAMPLES
   See Sample Schedule Chart 2 for sample size.

3. SPECIAL REPORTING AND PRECAUTIONS
   a. Report coding of cans and shipping cases.
   b. Obtain label specimen(s) for the slack filled products.
   c. Report shipments made before the inspection or since previous inspection in the same canning season.
   d. Do not prepare Authentic Factory Samples when the cannery is packing for USDA fill-of-container certification unless:
      i. USDA inspection is not continuous.
      ii. USDA Certification is for quality only.
      iii. USDA recommendations for weights are not being followed.

4. SAMPLE SUBMISSION
   Submit samples to your district's designated workplan servicing laboratory
imports - coffee, dates and date material

1. coffee - import field examination - note: examine a minimum of six bags of coffee beans regardless of lot size. if a significant number of defective beans or significant contamination is found during the examination of these six bags, continue the examination using the following schedule, which applies for both import field examination and samples for laboratory analysis:

<table>
<thead>
<tr>
<th>LOT SIZE</th>
<th>NO. BAGS TO BE SAMPLED</th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>

a. Sample each bag with a trier, collecting 1/2 pt. of beans from the top and 1/2 pt. from the bottom of the bag. the total quantity of beans taken from each bag must be the same, since both wharf and laboratory examinations are to be performed on a composite sample of all beans collected. shake each sub on a #8 sieve nested in a pan. Dump the sifted beans from each sub into a bag of sufficient size to hold and permit mixing all of the subs collected from the lot. Composite the subs. Do not maintain individually.

b. Macroscopic filth examine the siftings for macroscopic filth (live and dead whole insects, excreta pellets, extraneous material and sweepings), reporting findings for each sub separately. see iom 4.3.7.4. Transfer macroscopic filth, including all sifted material to a second bag and submit to the laboratory for confirmation. if live insect infestation is encountered, freeze the filth, including all sifted material to a second bag and submit to the laboratory for confirmation. if live insect infestation is encountered, freeze the filth portion containing the insects and the composite coffee bean sample. the lot will be detained if a live insect infestation is encountered, however, proceed with the defect bean examination since the reconditioning process will depend on the results.

c. Defect bean examination thoroughly mix the composite sample of coffee beans and remove three-hundred beans at random. examine each individual bean visually (or at a 5X magnification) for insect tunneling and mold damage. count as moldy only those beans with 1/4 or more of the surface being moldy. note: each district office has examples of the various types of reject beans. accept the lot if twenty or less rejects are found and discard the sample. report your wharf examination into facts or oasis, depending on your assignment; no sample collection report is necessary.

d. if twenty-one or more rejects are detected, return beans examined to the composite and submit to the laboratory. you may discontinue the examination when twenty-one rejects are detected. when a sample is submitted to the laboratory, all import field examination time is reported as a field exam in facts and the sample collection time is reported as an import sample collection. all necessary documents for an import sample collection must be completed.

2. dates & material - filth

in the laboratory, dates, like in-shell nuts are sampled in accordance with a sequential sampling program, i.e. all subsamples are composited, and 100 dates are sampled at a time, repetitively, until such time they either exceed or fall under certain reject numbers. it is not uncommon to have to examine 3 to 6 (100 date) repetitions. it is therefore important for each subsample to contain at least 200-300 dates or 2 lbs of date material. sample according to the following schedule:

number of subsamples required

<table>
<thead>
<tr>

</tbody>
</table>

* schedule is based upon unit containers weighing between twenty and one-hundred pounds. for containers exceeding one-hundred pounds each, consider as two or more containers. for example, a one-hundred and fifty pound container is considered as two containers; a three-hundred pound container as three containers, etc.

a. Identify each subsample separately.

b. Each lot will be a separate sample. Reconditioning, if possible, will be based on lot numbers.

c. Jujube sampling – collect according to the above schedule for dates and date material. Do not identify jujube samples as dates, Phoenix dactylifera. Jujubes, Zizphus jujube, are usually labeled as Chinese Red Dates, Dried Red Dates, or Honey Dates and are not misbranded when labeled as such due to long standing use of these names.

d. if live insects are noted, include these as part of the sample collected and report on the C.R. which subs contained the insects and how many insects, adult or larvae, were noted. If live infestation is noted, place all subs from the lot sampled in large plastic whirl-pak bags and freeze or place in a cooler on dry ice.

SAMPLING SCHEDULE FOR COLOR CONTAINING PRODUCTS & COLOR ADDITIVES

The following schedule provides general guidance for collecting samples of foods and cosmetics to determine whether non-permitted colors are present, rather than to determine the actual level of a particular color. This schedule was developed with the assumption that color distribution in the lot will be homogeneous. In the case of heterogeneous products, your supervisor should contact Center for Food Safety and Applied Nutrition, Office of Field Programs, Division of Enforcement (HFS-605) to determine sample size.

### GRAIN AND BAKING

02 Whole grains, Milled Grain Products and Starch
   - 2 retail packages
03 Bakery Products, Doughs, Bakery Mixes, and Icings
   - 2 retail packages
04 Macaroni and Noodle Products
   - 2 retail packages
05 Cereal Preparations
   - 2 retail packages
07 Snack Food Items (Flour, Meal, or Vegetable Base)
   - 2 retail packages

### DAIRY

09 Milk, Butter, and Dried Milk Pdts
   - Liquid Pdts: 2 pts where possible
   - Solid: 2 packages
12 Cheese and Cheese Products
   - 2 retail packages
13 Ice Cream and Related Products
   - 6 items per sample (If item is single serving; i.e., cup, popsicle, bar, etc.) 2 pt containers where possible, or 1 quart or 1/2 gal
14 Filled Milk and Imitation Milk Products
   - 2 pints
15 Egg and Egg Pdts
   - 2 dozen whole eggs (e.g. colored hard boiled Easter eggs)
   - 2 retail pkg of egg pdts

### MEAT & SIMULATED MEAT PRODUCTS

16 Fishery/Seafood Pdts
   - Any collection of smoked salmon should be selective, based on inspectional evidence
17 Meat, Meat Products and Poultry
   - 2 retail packages
18 Vegetable Protein Pdts
   - 2 retail packages

### FRUIT, NUT AND VEGETABLE PRODUCTS

20-22 Fruit & Fruit Pdts
   - 2 retail packages canned or glazed
   - 12 fresh fruit (e.g., oranges, etc.).
23 Nuts & Edible Seeds
   - 2 retail packages
24-25 Vegetable & Vegetable Products
   - 2 retail packages
26 Vegetable Oils & Olive Oil
   - Liquids - 2 pints
   - Solids - 2 retail packages

### DRESSINGS AND SPICES

27 Dressings & Condiments
   - 2 retail packages
28 Spices, Flavors, & Salts
   - Extracts - 2 pints
   - Solids - 2 retail packages

### BEVERAGES

29 Soft Drinks & Waters
   - 6 Retail Units (Cans, Bottles, Packets)
   - Liquids - 1 pint
   - Beverage Bases, Concentrates, and Nectars
   - 6 Consumer Pkg
   - Solids - 2/225 g (8 oz) or larger containers
30 Coffee and Tea
   - 2 retail packages
32 Alcoholic Beverages
   - 2 pints or 1 quart

### CONFECTIONS AND DESSERTS

33 Candy w/o chocolate, Candy Specialties, and Chewing Gum
   - 2 retail packages
34 Chocolate & Cocoa Pdts
   - 2 retail packages
35 Gelatin, Rennet, Pudding Mixes, & Pie Fillings
   - 6 pkgs - smallest consumer size
36 Food Sweeteners (Nutritive)
   - 2 pints

### MULTIPLE FOODS, SOUPS, SALADS, BABY FOOD AND DIETARY

37 Multiple Food
   - Single Serving Dinners,
<table>

<td>Same as 37 Above</td>
</tr>
</tbody>
</table>

**COLORS AND COSMETICS**

1. Straight Color 28 g (1 oz) powder.
2. Color Mixtures 110 g (4 oz) Liq, paste or powder.
   - If mixture contains over 50% pure dye, 55 g (2 oz) is sufficient
   - Four retail packages of the same lot code for each shade (color) in the product line, if the product is strongly colored. (e.g., Lipsticks, hair coloring products, eye mascara, eye liners, make up pencils of all types)

**MISCELLANEOUS**

1. Cosmetics
   - Sufficient number of retail packages to equal 1 lb or 1 pt of sample if the product is lightly colored. (e.g., creams, lotions, shampoos, bath products, shaving preparations, and perfumes.)
   - Note: Always collect a minimum of two retail units of each product.

1. Bulk Items (Any bulk food or cosmetic)
   - Dry - 454 g (1 lb)
   - Liquid - Min 36 fl oz
## DRUG SAMPLING SCHEDULES
(Does not include Antibiotic Preparations)

### STERILITY TESTING VITAMINS, DEVICES, & DRUGS

</tbody>
</table>

**LEGEND:**
1. Double sample size requirements when individual containers are 2 ml (2 g) or smaller.
2. INV sample includes units (30 for Drugs & 40 for devices) for examination and 6 units for bacteriostasis.
3. Official Sample includes units (30 for drugs & 40 for devices) for examination, units (30-40) for check, 20 units for 702(b) [21 U.S.C. 372(b)] and 6 for bacteriostasis.

Note: If a lot is aseptically filled into 200 finished units or less, sample no less than 10% of lot.

### DISSOLUTION TEST - USP & NF

Unless directed otherwise by your assignment or supervisor, submit samples to your normal servicing laboratory.

### SAMPLE SIZE

Collect a 200 tablet portion for drug potency analysis by the collecting district lab, plus a separate 100 tab portion to be split for dissolution testing.

### MICROBIOLOGICAL EXAMINATION OF DRUGS (Other than for Sterility)

<table>
<thead>
<tr>
<th>PRODUCT</th>
<th>MINIMUM SAMPLE SIZE (Includes 702(b) portion)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dosage Form Drugs (See #1 below), Bulk Drugs, or Raw Materials for Manufacturing</td>
<td>Sub Size: 90 g or 90 ml</td>
</tr>
</tbody>
</table>

### SAMPLING INSTRUCTIONS

1. Contact the laboratory (which has microbiological testing capabilities) serving your district for sample size requirements before sampling dosage form drugs containing less than 3 grains, 200 mg, or 25% of the suspect ingredient.
2. Use aseptic technique when collecting samples from raw materials or bulk containers. Implements and sample containers used must be sterile. Submit controls. See IOM 4.3.6 through 4.3.6.5.
3. Submit samples to the laboratory with microbiological testing capabilities which serves your district unless directed otherwise.
VETERINARY PRODUCTS, FEEDS, & BY-PRODUCTS FOR ANIMAL FEEDS

1. GENERAL

This sampling schedule may be used as a guide in the collection of surveillance or compliance samples resulting from district assignments or as a follow-up to violative inspections and/or investigations. Before collecting follow-up samples to violative inspections or investigations, contact your supervisor since it may be necessary for your district to consult with the Atlanta Center for Nutrient Analysis (HFR-SE680) when unscheduled compliance sampling is contemplated.

2. SAMPLE PRODUCT, SIZE, & SPECIAL INSTRUCTIONS

Vitamin-mineral testing, sampling instructions and information. Sample size includes 702(b) portion. 

Unless excessive cost is a factor, collect at least 3 intact containers from each lot or control number. When sampling from bulk lots, collect appropriate subs from a minimum of 3 different bulk containers in the lot.

DOSAGE FORM VITAMIN-MINERAL PREPARATIONS (Single/Multiple Ingredients)

FEEDS & BY-PRODUCTS FOR ANIMAL FEEDS (Vitamin-Mineral Claims)

- Vitamin A & D Concentrates, Supplements & (A&D feeding 3 retail units(1/2 gal or less) 3 lbs (1.4 kg) 3 pints Limit samples to those products containing at least 800 units/g Vit A and/or 80 Feeds units/g Vit D
- Vitamin B2 (Riboflavin) Concentrates, Supplements, & feeds Same Same Limit samples to those products containing at least 20 mg/lb
- Vitamin B12 (Cyanocobalamin) Concentrates, Supplements & feeds Same Same Limit samples to those products containing at least 1 mg/lb
- Multiple Vitamins Concentrates, Supplements, & feeds. Same Same Limit samples to those products meeting vitamin levels listed above.

3. SAMPLE SUBMISSION

Submit all samples for Vitamin Potency analysis to the Atlanta Center for Nutrient Analysis (HFR-SE680). Submit samples for filth analysis, microbiological examination, sterility, etc. to your district servicing laboratory.
MEDICATED ANIMAL FEEDS SAMPLING

Medicated Premixes
1. Investigational Samples (INV Samples)
   To demonstrate suspected drug carryover or other chemical contamination during manufacturing, collect 1-900 g (2 lbs) of static residual material in the equipment, and the finished product premixes.
2. Official Physical Samples 702(b) [21U.S.C.372(b)] Portion Included
   For expensive premixes or components, collect a total of 3/170 gm(6 oz) subs; One sub from each of 3 containers. In the case of premixes packaged in plastic; e.g., mini-packs, follow instructions under bagged premixes.
   a. Bagged Premixes
      Collect 10 - 454 g (1 lb) subs from each lot. Sample all bags in lots under 10 bags, for a total of 10 subs from the lot.
      Collect 454 g (1 lb) subs from at least 10 different bags selected at random in lots of more than 10 bags.
   b. Bulk Premixes
      Collect at least 10 - 454 g (1 lb) subs, from different locations in the lot providing a minimum total sample of 4.5 Kg (10 lbs).
3. Documentary Samples (DOC Sample) - Refer to IOM 4.1.4.2 for guidance on the collection of DOC Samples.

Medicated Feeds
1. Investigational Samples (INV Sample)
   Collect 1 - 900 g (2 lb) of static residual material in the equipment and correlate with finished feed samples to show that residues are being carried over into the finished product.
2. Official Samples (Includes 702(b) portion)
   a. Bagged Complete Feed
      Collect a total sample of not less than 2.3 kg (5 lbs) from each lot. Collect 454 g (1 lb) subs sampling all available bags from lots of 10 bags or less. If lot size is greater than 10 bags, collect 454 g (1 lb) from each of 10 bags selected at random.
   b. Bulk Complete Feed
      Collect at least 10 - 454 g (1 lb) subs from different points in the bulk lot to obtain a minimum total sample of 4.5 kg (10 lbs).
   c. Concentrates/Supplements
      If the concentrate or supplement is relatively inexpensive, follow the sampling procedures for complete feeds. Limit sampling of more expensive drug materials, concentrates, or supplements to no more than 3 containers taking a 170 g (6 oz) or 6 fl. oz. sub from each of the 3 containers.
3. Documentary Samples (DOC Sample)
   a. Feed Subject to MFA Approval - Collect DOC Samples of products processed without required MFA approval. Where the plant does not ship in IS commerce, but ingredients are received from IS sources, document the IS nature of drug ingredients and the "Held For Sale" status of the finished feed. Labeling of drug ingredients must be submitted.
   b. Misbranded Products - Collect a DOC Sample for misbranding or labeling deficiencies. The failure to provide warning and/or withdrawal statements which could present danger to animals or man, or gross evidence of false and misleading therapeutic claims, are factors for consideration.

Sampling Precautions (See IOM Sample Schedule Chart 4)
1. Insert the trier the full length of the bag when sampling bagged premixes, or complete feeds.
2. Clean trier between sampling the different lots of premixes or complete feeds.
3. Place subs in a clean, airtight container, preferably clean glass jars.
4. Do not fumigate samples intended for potency analysis, drug carryover or cross-contamination.

Sample Submission

Submit samples to your district's servicing laboratory or as directed by your assignment or supervisor. See IOM 4.5.5.2.
SAMPLE SIZES WITH APPLICATION TO FOOD PRODUCTS FOR ALLERGENS
(Listed below is the sample size needed for lab analysis. Collect all samples in duplicate, with the duplicate serving as the 702 (b) reserve sample)

IMPORTANT! WHEN TO SAMPLE: At the time of submission of this table to the IOM, only “for cause” allergen samples for peanut contamination should be collected. Test methods for additional allergens are under development and the field will be notified when they are available for regulatory purposes. The allergen compliance program, when issued, will provide additional sampling guidance. “For cause” sampling should be limited to instances where a consumer, medically determined to have a food allergy, experiences an adverse event believed due to the allergenic food, and the labeling of the suspect product does not indicate the presence of the allergen.

Also reference IOM Chapter 8, 8.4.7.5, Allergen Samples, which indicates that allergen samples are to be collected after consultation with OCM/OEIO.

See Laboratory Information Bulletin (LIB) # 4341, Application of Validated, Multiple Laboratory Performance Test MethodsSM for the Detection of Peanuts in Food, Vol 21(2) 2005 for details regarding the analysis and quantitation of analytical samples.

Note: To be collected from random sites. May combine subs or maintain sub integrity depending on purpose of sampling

Note: Prepare composite following proper grinding and mixing procedures. Separate four 1-lb portions from composite.

Adapted from U.S. Food and Drug Administration, Office of Regulatory Affairs, Investigations Operations Manual, Chapter 4, Sample Schedule 6, Mycotoxin Sample Sizes
