APPROVAL LETTERS

I. Purpose 1
II. Scope of the approval letter..... 1
III. Elements of approval letters 1
IV. Final routing for approval letters 7
V. References 8
VI. Version history 8

I. PURPOSE

This document describes the procedures you use to prepare and route the approval letter for:¹

- original new animal drug applications (NADAs) and abbreviated new animal drug applications (ANADAs)
- (A)NADA supplements classified as "B1" supplements,
- (A)NADA supplements classified as "NF" (non-fee supplements requiring prior approval),
- (A)NADA supplements classified as "NL" (non-fee labeling supplements), and
- manufacturing supplements.

II. SCOPE OF THE APPROVAL LETTER

The intent of our approval letter is to inform an applicant of the approval and the conditions of approval. It is not intended to provide the details of the basis for our decision to approve. Therefore, the approval letter does not specifically discuss findings relevant to particular technical sections (e.g., environmental impacts, human food safety, effectiveness) of an application.

III. ELEMENTS OF APPROVAL LETTERS

When preparing an approval letter, use the office or division template for the type of approval letter you are writing.² Follow P&P 1243.3010 Format and Style Conventions for Letters. Further specific instructions for how to fill in certain fields of the approval letter template follow.

¹ For purposes of this document, "you" refers to a reviewer, consumer safety officer (CSO), or other individual from the team or division in the Office of New Animal Drug Evaluation (ONADE) responsible for preparing the approval letter for an application.

² Use the Division of Manufacturing Technologies template for manufacturing supplement approval letters. Use the Office templates for all other letters covered by this P&P.

A. Inside address:

Direct the letter to the attention of the responsible official (i.e., sponsor or other party on the sponsor's behalf³) named as the contact in the Responsible Official (or US Agent) Information section of the eSubmitter form. Use the firm name and address provided for the responsible official in the Responsible Official (or US Agent) Information section of the eSubmitter form. However, if you find obvious typographical (i.e., spelling) errors in either the firm name, firm address or responsible official information, you should use the correct information in the inside address instead of using the incorrect information from the form.⁴

Additionally, if the firm name in the Responsible Official (or US Agent) Information section of the eSubmitter form appears to be incorrect or is unclear regarding the identity of the drug application sponsor (e.g., if the firm name is written in the eSubmitter form or cover letter as "Drug Company Animal Health" and the firm name listed in 21 CFR 510.600 is "Drug Company Animal Health, a Division of Drug Company Inc."), contact the responsible official to obtain the correct name. Note in your review documentation that you contacted the sponsor to clarify the information, and if applicable, make note of the corrected name in your review documentation and in the Quality Control (QC) Review Request form (see P&P 1243.3210), and use the corrected name in the inside address.

You may also modify the stylistic presentation (capitalization, punctuation, and spacing) of the firm name and the official's name, titles, and degrees contained in the form to match the addressee's preference in the cover letter. However, do not add information (e.g., degrees) if it is not in the information provided in the eSubmitter form.

B. Body of the letter:

1. Opening paragraph

Format the proprietary name in the approval letter using the exact format from the labeling. Typically, this means if there is a package insert, use the formatting for the proprietary name found at the beginning of the package insert. If there is no package insert, use the format for the proprietary name found on the front panel of the immediate container's carton labeling or the front panel of the immediate container label.⁵ Use that format throughout all approval documents in all locations where the proprietary name is used, including any trademark symbol associated with the name.⁶

³ Examples of when it is acceptable for a submission to be sent to us by another party on the sponsor's behalf: 1) the company is not a United States company, they will have U.S. Agent; 2) correspondence may come from consultants; 3) a parent company submits information on a subsidiary's behalf.

⁴ Note: If the application was submitted in paper, the person who signed the 356v is the Responsible Official.

⁵ Note: This is not the process for products reviewed by the ABCT Team. Consult your team leader if you are on the ABCT Team.

⁶ For information on proprietary names, see P&P 1243.3015 Proprietary Names.

In situations where the application was submitted by another party on the sponsor's behalf, identify the sponsor by name in the opening paragraph of the letter.

For original (A)NADA approvals, include the full indication(s), and if appropriate, any additional conditions of use. An adequate description of what we are approving is critical to ensure that the applicant knows exactly what drug and uses we are approving. This also ensures we have a clear record on which to base an enforcement action if the applicant is marketing the drug for unapproved uses. Copy the indication(s) verbatim from the indication section of the package insert. If there isn't a package insert, copy it from the immediate container's carton labeling or the immediate container label. For supplemental approvals, include only the changes (indications, species, or other conditions of use) that are being approved in the supplement. If the proprietary name appears in the indication, format the name the same way the proprietary name is formatted elsewhere in the approval package.

In cases where the expiration dating changes as part of a supplemental (A)NADA approval, include the expiration dating sentence in the letter.

2. Marketing exclusivity

The approval letter templates include boilerplate for marketing exclusivity information. Where appropriate, you will select the boilerplate that applies.⁷

3. Standard language for certain antimicrobials

Include the standard language⁸ as the second paragraph only in approval letters for original or supplemental applications for antimicrobials of human medical importance intended for use in food-producing animals in which no microbial food safety assessment (under Guidance for Industry [GFI] # 152) was conducted for the pending application. This applies to antimicrobials intended for production uses, prevention use, and all other therapeutic indications.

Standard language is provided in the applicable templates for the following types of approvals:

- supplemental (A)NADAs (NF subclass codes)
- supplemental (A)NADAs (NL subclass codes)
- supplemental (A)NADAs (manufacturing)
- original and supplemental NADAs (Animal Drug Availability Act [ADAA] combinations)

⁷ See P&P 1243.5780 for information on marketing exclusivity.

⁸ See the ONADE policy for approval of antimicrobials for food animals at Internal information redacted.

- original ANADA involving two, three or four Type A medicated articles to manufacture Type C medicated feeds.

For applications other than those listed above, contact the Policy Team as soon as possible for standard language for an approval of an antimicrobial of human importance intended for use in a food-producing animal. If you have any questions about whether your application requires the standard language, talk with your supervisor.

4. Labeling and veterinary feed directive (VFD) paragraph

Choose the paragraph below that pertains to the type of labeling submitted with the application.

a. Dosage form products

If the submission includes only facsimile labeling,⁹ or if it includes a mix of facsimile labeling and final printed labeling (FPL), use the paragraph that requests submission of FPL prior to marketing and references the date of the facsimile labeling submission and submission code. This paragraph explains that FPL must be identical to the facsimile labeling approved as part of the application.¹⁰ Note: Facsimile and FPL may not be identical if the sponsor adds the "Approved by FDA..." statement to their FPL after we have accepted their facsimile. This is an allowable difference. This paragraph also instructs the applicant when to submit FPL to the Center for Veterinary Medicine (CVM).¹¹

If acceptable FPL for all components was provided with the application, use the paragraph acknowledging acceptability of the FPL.

b. Type A medicated articles and combination medicated feeds

In most cases, for single ingredient Type A medicated articles, we approve labeling for the Type A medicated article, representative labeling for Type B and Type C medicated feeds manufactured from the Type A medicated article, and if applicable, a representative VFD(s). If we are approving the application based upon facsimile labeling, the applicant needs to submit FPL via eSubmitter for the Type A medicated article identical to the

⁹ See the Facsimile Labeling Policy on the ONADE Policy SharePoint Page
Internal information redacted.

¹⁰ In the rare occurrence that you find typographical errors in the labeling submitted with an (A)NADA, check with your supervisor to determine whether to 1) request revised labeling as an amendment or 2) describe the changes in the approval letter and allow the sponsor to make the changes when they submit FPL. It is also acceptable for sponsors to add/update their FPL to include the "Approved by FDA...". For feeds, this would also include submission of updated Type B and Type C medicated feed labeling. Requesting corrections in the approval letter is strongly discouraged.

¹¹ 21 CFR 514(b)(3)(vi) requires sponsors to submit three copies of their final printed labeling. ONADE is currently accepting a single copy because submissions are received electronically.

approved facsimile labeling for their product. Because Type B and Type C medicated feed labeling is representative labeling (i.e., it includes general information about the feed but varies depending on mixing), the applicant does not need to submit FPL for Type B and Type C medicated feeds or for the VFD(s).¹²

For single ingredient medicated article approvals, if a facsimile Type A medicated article label was submitted, use the paragraph in the letter requesting the submission of FPL for the Type A medicated article as described above. If acceptable FPL for the Type A medicated article was submitted, use the paragraph acknowledging acceptability of the FPL of the Type A medicated article.

For combination medicated feeds (ADAA or non-ADAA) with no Type A medicated article labeling (i.e., because the combination approval is only for the combining of the Type A medicated articles into a Type B and/or Type C medicated feed), the boilerplate paragraph states that the Type B and Type C medicated feed labels (and VFD(s), if applicable) are acceptable.

5. "Approved by FDA" labeling statement

We are now requesting the addition of an "Approved by FDA" labeling statement based on the Animal Drug and Animal Generic Drug User Fee Amendments of 2018 (H.R. 5554). These amendments added a section to the Federal Food, Drug, and Cosmetic Act (FD&C Act) that requires the addition of the statement "Approved by FDA under NADA # XXX-XXX" or "Approved by FDA under ANADA # XXX-XXX" to labeling (except representative [Blue Bird] labeling) of approved new animal drugs and generic new animal drugs, respectively, by September 30, 2023. We are requesting the addition of the labeling statement to all approved and marketed labeling components of these products. We are also encouraging the addition of the statement to Blue Bird labeling to clearly identify that the medicated feed was manufactured in accordance with FDA-approved Blue Bird labeling. The ONADE Policy 'Initial Recommendations for the Addition of Approved by FDA Statements to Labeling' found on the ONADE Policy SharePoint page provides information on when and how to ask the sponsor to add the statement to the labeling.¹³

¹² Type B and C medicated feed labeling generally includes the name of the drug, the indications, the active ingredients, a guaranteed nutrient analysis that must meet the Association of American Feed Control Officials (AAFCO) standards, a list of the ingredients mixed, mixing or feeding directions, warnings, and cautions.

¹³ Link to ONADE Policy on "Approved by FDA..." labeling statements
Internal information redacted.

If the facsimile labeling or FPL provided in the application does not include the applicable labeling statement, and/or for supplemental applications, if any of the approved and marketed labeling components identified in the A/NADA's Volume 0 do not include the new statement, include the paragraphs from the applicable approval letter template that describes the basis for us requesting the new labeling statement. Also include the applicable section(s) following these paragraphs, depending on whether the product being approved is a dosage form drug, Type A medicated article, or a combination medicated feed approval. If approving a proprietary Type B or Type C medicated feed, use instead language provided in the Office Policy 'Initial Recommendations for the Addition of Approved by FDA Statements to Labeling', Section X.

6. Manufacturing paragraph

For supplements or ADAA combination approvals that do not involve a change in the Chemistry, Manufacturing, and Controls (CMC) information, do not put a manufacturing paragraph in the approval letter.

For all other (A)NADA approval letters, use the manufacturing paragraph provided in the letter.

Type C free-choice medicated feeds. In those instances, in which we are approving an original or supplemental application for a Type C free-choice medicated feed that does not require a feed mill license (i.e., manufactured from a Category I Type A medicated article using a formulation that will be published in the CFR), do not put a manufacturing paragraph in the approval letter. If we are approving an original or supplemental application for a Type C free-choice medicated feed that does require a feed mill license (i.e., manufactured from a Category II Type A medicated article or using a proprietary feed formulation), use the following alternative manufacturing paragraph:

The manufacture of full-scale commercial batches using manufacturing instructions that have been determined to yield a properly mixed medicated feed product of the specified formulation is not a requirement for approval. However, medicated feed manufacturers must be able to assure that following the manufacturing instructions will result in a properly mixed feed under good manufacturing practices (GMPs) for medicated feeds (21 CFR 225.102(b)(1)(iv)).¹⁴ Therefore, the feed mill should document the successful evaluation of multiple full-scale batches (usually a minimum of three (3)) of the specific free-choice formulation prior to shipment of the medicated feed product. In addition, adequate cleanout procedures for all equipment used in

¹⁴ For medicated pet foods, contact the Division of Manufacturing Technologies for the appropriate GMP citation.
Responsible Office: Office of New Animal Drug Evaluation
Date: April 4, 2019

the manufacture and distribution of medicated feeds are essential to assure proper drug levels and avoid contamination (21 CFR 225.65).

C. Complimentary closing and signature block:¹⁵

In the closing paragraph, provide the contact information for the division director and/or team leader according to your division procedures.

The center director signs the approval letter for original applications and supplements that would approve new animal species, significant new indications, and changes in Rx/OTC status¹⁶. The ONADE director signs the approval letter for other B1 supplemental applications (that approve changes other than those delegated to the center director). The division director signs the approval letter for NF supplements, NL supplements, and manufacturing supplements.

D. Enclosure notation:

Include a notation of any other documents that should be sent to the sponsor with the approval letter (e.g., FOI Summary).

IV. FINAL ROUTING FOR APPROVAL LETTERS

A. Approval letter for an original or supplemental (A)NADA

The approval letter for original or B1 supplemental (A)NADAs will be routed as part of the (A)NADA approval package. Routing for (A)NADA approval packages is described in P&P 1243.3800. When uploading files into Appian, select the radio button beside "Yes, send to firm" to send the sponsor a copy of the approval letter and a copy of the enclosures (e.g., FOI Summary).

Routing of NF supplements is described in P&P 1243.6040.

Routing of NL supplements is described in P&P 1243.6020.

B. Approval letter for a manufacturing supplement

The director of the Division of Manufacturing Technologies, HFV-140, has signature authority for approval of manufacturing supplements described in 21 CFR 514.8. The approval letter for manufacturing supplemental (A)NADAs will be routed as part of the final action package. See P&P 1243.6030.

¹⁵ You can find the delegations of authority for approval of new animal drug applications, medicated feed mill license applications and their supplements in the Staff Manual Guide, Delegations of Authority (Volume II), Section 1410.502.

¹⁶ For generic products, the ONADE Director signs the letter for new indications, species, etc. that are a result of the RLNAD exclusivity expiring in an NF supplement.

VI. VERSION HISTORY

November 16, 2001 – original version

August 15, 2003 – Revised

December 10, 2007 - Revised to incorporate format and style conventions, changes and boilerplate language agreed upon by ONADE Management, incorporating active voice where possible, sample letters, and revised overall format.

March 12, 2008 – Revised to clarify what address to use for the inside address and to make grammatical changes.

July 1, 2008 – Revised to correct grammar in exclusivity paragraph of sample letter.

November 17, 2008 – Division of Manufacturing Technologies revised the document to add clarifying information regarding the manufacturing paragraph (paragraph 4) of the approval letter and free-choice feeds.

December 4, 2008 – Revised to properly format footnotes 8 and 9.

February 4, 2009 – Revised to correct citation in manufacturing paragraph in sample letters in Appendices 1 and 2. Paragraph now correctly cites Section 501(a). Added a citation to P&Ps 1243.3010 and 1243.5741 for information on how to format the proprietary name.

June 10, 2009 – Revised to reflect policy on facsimile labeling for a Type A medicated article that is reduced in scale and instructions in sample letters for NADA and ANADA and their supplements were added.

August 31, 2010 – Revised to replace sample letters with templates, and update boilerplate language to currently used wording.

October 31, 2017 - Revised to incorporate updated procedures. Internet version has been redacted to remove internal information.

March 9, 2018 – Revised to clarify procedures regarding the inside address of the letter.

August 6, 2018 – Revised to include specific information regarding formatting of the proprietary name and where to get the indications for the new animal drug product for the approval letter in section III. B. 1. and reference the P&P for proprietary names (i.e., 1243.3015).

December 14, 2018 – Revised to correct a typographical error.

April 4, 2019 – Revised to add instructions on when and how to ask for addition of “Approved by FDA...” statements to labeling. Revised to remove information about send the FONSI with the approval letter to the sponsor. This is no longer done. Added a section on marketing exclusivity to let the reader know there is boilerplate in the approval letter template to handle exclusivity and reference the P&P on exclusivity.
