Diamond Maintenance for Adult Cats, EverPet Chicken jerky Biscuit Wraps	Dog	Chihuahua	5	Years	Female	10	Pound	The subject exhibited symptoms of Salmonella infection to include lethargic behavior and has diarrhea and bloody diarrhea, abnormally low body temperature, and vomiting. The only food she consumes is the cat food, manufactured by Diamond (Maintenance for Adult cats) and the treats she has been given is manufactured by EverPet, (Chicken Jerky Biscuit Wraps) as well as Real Chicken Chicken Chips, both manufactured in China. These products by EverPet we found have been recalled several times and is still on the shelves at the Dollar General store we shop at in Alvord, Texas. We informed them of the situation, and they have since removed the product. The dog is still, as of this writing, under the veterinarian's care with little improvement.
Vitalife Duck & Sweet Potato Recipe Twists	Dog	Bulldog	2	Years	Male	60	Pound	(b) (6) vomited and had bloody diarrhea within hours after having one Vitalife dog treat.
Vitalife Duck & Sweet Potato Recipe Twists	Dog	Bulldog	2	Years	Female	66	Pound	(b) (6) vomited and had bloody diarrhea within hours of given one Vitalife dog treat.
Vitalife Duck & Sweet Potato Recipe Twists	Dog	Bulldog	5	Years	Female	50	Pound	(b) (6) was given one dog treat before bed. Within hours she vomited and had bloody diarrhea.
Vitalife Duck & Sweet Potato Recipe Twists	Dog	Bulldog	5	Years	Female	61	Pound	After feeding (b) (6) one Vitalife treat, she vomited and bloody diarrhea within hours
Vitalife Duck & Sweet Potato Recipe Twists	Dog	Bulldog	2	Years	Female	60	Pound	(b) (6) fed (b) (6) one VitaLife Duck & Sweet Potato Recipe Twist every other day for approximately 5 months. She didn't display obvious signs of illness until 2/3 days before her death. When taken to the Vet, the Vet said the tests revealed she had kidney failure. Despite attempts to save her life, the Vet had to euthanize (b) (6) She had gone into renal kidney failure. The Vet asked if (b) (6) had been fed these treats. Although the Vet didn't have the means to determine that the treats were the cause of the kidney failure, it was highly suspected.
Cadet Gourmet Duck Breast	Dog	Mixed (Dog)	2	Years	Female	50	Pound	Within 3 to 4 hours after giving my dog 2 pieces of Cadet Duck Breast jerky she became very lethargic, would not eat her normal food and would not even take a dog biscuit. She remained in this condition for about 36 hours. During that time she would only drink water. She is normally a very active and playful dog but she would only get up to be let out to relieve herself. After about 36 hours, she began to be more active and after a total of 4 days, she began to be herself again.  I have kept the package of dog treats but have not given her any more since this happened.
Beefeaters Piggy Twist Roll 3pk	Dog	Pinscher - Miniature	14	Years	Female	11.6	Pound	was given a Beefeater (brand) Piggy Twist Roll--ate most at ~9 pm. the following am, dog was unable to coordinate her legs and when finally did, couldn't see, bumped into walls for the entire day. she was disoriented, panting, wobbly and nervous. the symptoms took two days to subside fully. this has happened one other time (they rarely get these to chew on).
CANYON CREEK RANCH CHICKEN TENDERS	Dog	Terrier - Yorkshire	9	Years	Male	4	Pound	(b) (6) presented on 5/9/13 for evaluation of foul breath and difficulty chewing. She had lost 2lbs since her last exam in June, 2011 (8.2lbs- 6). There was serious dental tartar and gingivitis. Aside from that her exam was unremarkable. Screening anesthetic bloodwork indicated that she was in kidney failure. The other dog in household presented on same day with malaise and loss of appetite. His bloodwork also indicated that he was in kidney failure. We discussed with the owners at length any possible toxins or exposure to anything that would cause this. The only questionable substance was regular ingestion of Canyon Creek Chicken Tenders treats. We have followed up with a consultation with Cornell, regular outpatient fluid therapy, labwork rechecks and medications.
Full Moon Kitchen Crafted Dog Treats Authur Pet Products Chicken Jerky	Dog	Shepherd Dog - German	9	Years	Female	88	Pound	bloody explosive diarrhea
Jerky Treats Tender Strips: Del Monte Foods (Lamb made in USA)	Dog	Retriever (unspecified)	15	Years	Female	45	Pound	started vomiting prior to receiving 2 treats daily. stopped treats after a week and vomiting stopped immediately
Milo's Kitchen Chicken Jerky Waggin' Train Jerky Tenders	Dog	Pinscher - Miniature	3	Years	Female	15	Pound	I took my Min-Pin to the vet to get her teeth cleaned and upon doing bloodwork before the procedure, discovered she had high levels associated with kidney disease. A week and a half later, I had to put her down due to a rapid decline of health despite efforts to correct the problem. It was speculated that her cause of death was a more than likely a result of the chicken treats from China that have been removed from the market. I am greatly saddened and heartbroken of her loss and at the same time furious to find out that no one is being held liable for this.
Dogswell Happy Hips Chicken Breast (with glucosamine and chondroitin	Dog	Chihuahua	6	Years	Female	7.93	Pound	Routine annual comprehensive bloodwork screen identified azotemia. O, in retrospect, reported that Bebe (and the other 2 dogs) have been polydipsic recently.

American Kennel Club Chicken Jerky	Dog	Terrier - Yorkshire	7	Years	Female	12	Pound	(b) (6) was given Chicken jerky for approx 2-3 weeks, started having a few episodes of vomiting on 5/9/13 and then progressively became worse that weekend and was not holding down any solid food. Was taken to the vet on Monday 5/13/13 and given Subcutaneous fluids and an anti emetic shot for the Nausea and vomiting. That night (b) (6) started excessive thirst and urination and was still vomiting. (b) (6) was taken back to the vet on Tues and recommended to go to the emergency vet clinic in (b) (6) for further assessment. (b) (6) spent the night at the emergency vet and released to regular vet that next day. (b) (6) was not improving, only becoming worse. Both of these vets thought she had gastritis. On Wed 5/15/13, (b) (6) spent the day at the vets office for IV hydration and medication. On Thursday Thursday 5/16/13, it was advised that (b) (6) be evaluated at a specialty vet office in (b) (6). We drove our Yorkie-Poo there and they suspected she was developing Fanconi syndrome from eating the chicken jerky that was produced in China. Urine was sent to the University of Pennsylvania and confirmed on 5/22/13 that (b) (6) did develop Fanconi Syndrome from the Chicken jerky that was consumed. (b) (6) passed away on 5/20/13 before we knew the results of the urine tests. From the time (b) (6) started showing signs of becoming ill until she passed away, we spend approx \$5500 in vet bills and still lost our precious family member.
Dentley's Natural Flavor Rawhide Chew Chips	Dog	Retriever - Labrador	2	Years	Male	130	Pound	Have purchased Dentley's Natural Flavor Rawhide Chew Chips for 2 years with no problems. However, I bought a new bag within the last month and have given my dog a chew 3 separate times on 3 separate days from this bag. Within less than 10 minutes of consuming each chew, he has vomited. Vomiting is extremely rare for him, so by the third incident, I was very suspicious. I checked the bag for country of origin and discovered that it has been changed to MADE IN CHINA. This made me very angry because I avoid any food or treats from China for this exact reason. This product had been made in a South American country up until this point. My dog is not quite himself but has not vomited anymore, so I hope he will be ok. The product does seem to have more of an odor than usual, but I am not positive about that.
Dogswell Vitality chicken breast with flaxseed and vitamins made in China	Dog	Retriever - Labrador	9	Years	Female	54.2	Pound	projectile vomiting, unquenchable thirst leading up to listlessness.
Waggin Train	Dog	Retriever - Golden	6	Years	Male	75	Pound	Gave Waggin Train treats to two dogs ( mine & neighbor dog ) approximately two weeks ago. Started noticing my dog losing weight, had constant diarrhea and vomited on occasion. When he did drink water it was excessive and sometimes would vomit afterwards. Became lethargic at times and then refused to eat. He has dropped approximately 20 pounds in few weeks since eating treats. Took him to the vet three times and last time they kept him in overnight on IV antibiotics. They wanted to keep him longer but we thought taking him home might help with his appetite and recovery. We were able to take stool sample in as of today so will wait results of that as he still has major diarrhea. He is finally eating but we are still giving him antibiotics and other meds. We have spent over \$1000. in vet bills this past week and still have no answers as to the cause of his illness. The vet has taken x-rays x 2, blood tests x 2 with no definitive answers yet. I am positive it is these treats that caused him to regress and I will be taking action to have the responsible parties pay for any suffering or damage this may have caused in our beloved pet. The vet also mentioned it was like he had pancreatitis.
Dogswell Happy Hips Chicken Breast	Dog	Lhasa Apso	14	Years	Female	11	Pound	I gave my dog approximately 6 chicken jerky treats over 3 days around the end of February 2013 until she began vomiting and having diarrhea. I discontinued giving her the chicken jerky at that time. However she has been in slow decline over the past 2 1/2 months resulting in a diagnosis of renal failure on 5/8/2013. On that day she began expensive treatment for renal failure and I now prepare the only food she is given - boiled chicken, white rice and vegetables - and she is given distilled water to drink. She is on medication as well as receives sub Q fluids all of which I administer. I have high hopes that her condition will improve but more than likely, the damage has been done. I have been advised by her veterinarian that her condition is not reversible and our efforts are purely to make her comfortable in her last stages of life.
Milo's Kitchen Homestyle Dog Treats Chicken Jerky in addition to UPC and lot number owner provided this label information: #P504680E 1	Dog	Terrier - Fox (unspecified)	4	Years	Male	5	Pound	This is being transcribed and submitted on behalf of the pet owner who provided information to FDA via mail. The dog was fed treats for the first time on 12/26/12. The dog was sick that night and died the next day. On 12/27/12, animal presented to veterinary clinic no breathing and with no heart beat.
Waggin Train Treats - Chicken products and Dingo Dog Treats Chicken. Jerky Treats	Dog	Terrier - Yorkshire	3	Years	Female	10	Pound	At the end of 2012 and beginning of 2013 ( Dec-January) owner fed Jerky treats shortly after using these treats patient began to lose weight and on January 25 she was diagnosed with renal failure, glomerulonephritis with proteinuria. Despite hospitalized treatment she declined and developed hypertension as well. She succumbed to the disease process January 31st 2013. Due to severe decompensation she was euthanized Jan 31, 2013.
Waggin Train Chicken jerky Treats	Dog	Corgi - Welsh Pembroke	7	Years	Male	40	Pound	(b) (6) had eaten a Waggin Train chicken jerky treat. About an hour later he started vomiting and then became very lethargic. By evening, he became very thirsty and was drinking a lot of water. Later, he began panting excessively. By morning, he couldn't walk. My son picked him up and held him in the car and we took him to the vet. After checking him and giving him pain medication, he was xrayed. The vet said he had total renal failure and there was nothing that could be done. They asked what we fed him and when I mentioned the chicken jerky treats. They said there were many dogs who had died from eating these treats and my vet had treated many sick animals. (b) (6) passed away that night in the care of the vet. They posted warnings about these treats all over their office and exam rooms.

Dogswell Happy Hips Duck Breast, Dogswell Veggie Life Vitality	Dog	Schnauzer - Miniature	7	Years	Female	18	Pound	Presented for limp on right rear leg. Routine bloodwork was taken for annual exam and revealed elevated liver enzymes consistent with history (ALT 239 (N= 12-118); ALKP 632 (N= 5-131), moderate macrocytic normochromic non-regenerative anemia (HCT 28 (N=36-60); RBC 3.2 (N= 4.8-9.3); MCV 90 (N=58-79), azotemia (BUN 54 (N= 6-31); Creatinine 2.2 (N= 0.5-1.6) and glucosuria 3+. Blood glucose was within normal limits (96 (N=10-138). The owner states that the patient had been receiving treats known to be manufactured in China: Dogswell Happy Hips Dogswell Veggie Life Vitality
Beef Eaters Chicken Fillets	Dog	Terrier - Bull	3	Years	Female	47	Pound	On Saturday May 11,2013 I purchased a bag of Beef eaters chicken fillets and on Sunday May 12,2013 my dog started vomiting and just laying around.by Monday May 13,2013 she would not eat.Tuesday and Wednesday the same thing no eating just a little rice on Wednesday and still just lying around.
Dogswell shape up chicken breast L-carnitine weight management	Dog	Poodle - Miniature	6	Years	Female	13	Pound	Presented for inappetance but was always a picky eater. Had been eating dogswell chicken jerky even though we had recommended she stop feeding the chicken jerky. Blood showed phos-1.8(2.6-67), glucose 69 (70-138). Urine showed glucose 3+. protein 1+ ph- 6.5, usg- 1.015. Animal became Pu/Pd and was urinating in the house. Blood gas ph- 7.36 (7.31-7.42), bcarb- 19.3 (20-29), BE= -4, tco2- 20.4, pO2- 92, k- 3.5 ( 3.5-5.8). Started on tumil k, osteoform, and sodium bicarb. Fanconi panel sent to upenn and is pending.
Vitalife Chicken Tenders And Vitalife Sweet Potato and Duck Twisters	Dog	Bulldog	2	Years	Female	22	Kilogram	Presented for weakness and vomiting. Severe anemia and renal failure was diagnosed through laboratory work.
Petsmart "Simply Nourish" Chicken and rice Adult Dog food, Authority Experts in Nutrition Chewy Dog Treats Chicken Jerky	Dog	Saint Bernard Dog	5	Years	Male			Dog has experienced watery, uncontrolled diarrhea for two days, but has not been exposed to typical triggers, such as a community water bowl. Has only consumed Authority Chewy dog treats (chicken Jerky) and PetSmart "Simply Nourish" Chicken and brown rice dog food, both were new packages before the onset of symptoms.
Chicken Nibbles	Dog	Terrier - Yorkshire	9	Years	Female	6.6	Pound	Has been feeding PCI brand Chicken Nibbles for years. Recently purchased a new container and within a few days of feeding treats, (b) (6) became lethargic and stopped eating and not acting like herself. No other changes to food or treats were made. She is not on any medication other than monthly heartworm preventative which was given weeks before. Evaluated by another veterinarian on May 6, 2013, at our practice who submitted bloodwork and a urinalysis. Blood work was within normal limits, but her UA showed a USG 1.023, with proteinuria and glucosuria. She is currently hospitalized on supportive care.
Wagon Train Chicken Jerky Treats	Dog	Havanese	6	Years	Female	7	Pound	After feeding my dog Wagon Trains chicken jerky treats for approximately 1 year, I read warnings about chicken treats from China about 3 months ago and I stopped giving them. In April 2013, my dog became sick and vet discovered her kidneys were failing. One week later she was euthanized due to elevated numbers in kidney and her condition continued to deteriorate. There are numerous chicken treats available for sale in California all made in China and these need to be stopped.
Beefeaters Chicken Wraps w/ sweet potato	Dog	Chihuahua	3	Years	Male	10	Pound	gastroenteritis
Cadet Gourmet Duck Breast, Kingdom Pets Chicken Jerky	Dog	Retriever - Labrador	10	Years	Female	62	Pound	Dog became seriously ill for unknown reasons. NO appetite. Listless. 106 degree temperature. Vet prescribed antibiotics for 10 days and special bland diet (x-rays showed inflammation but no other diagnosis). Dog regained appetite after a few days and energy was returning. After 9 days, fed chicken and duck jerky as a treat since the dog seemed healthy again (had been provided before the illness also). Dog became ill within a few hours. Looked up jerky snacks on internet since the dog had been progressing up until consuming the jerky treats. Waiting for improvement - tossed jerky treats.
Waggin Train Chicken Jerky Treats	Dog	Retriever - Labrador	5	Years	Female	50	Pound	Without warning, my 5 year old dog went into kidney failure. She was dead within 3 weeks. I just learned about the recall of Waggin Train chicken jerky treats. This was her favorite treat. She ate a couple of them everyday for many years. I am now very sad, and feel certain that it is very likely that this is what caused her premature death. I had no idea that there was anything wrong with them.
PCI Brand "Chicken Breast Tenders"	Dog	Chihuahua	6	Years	Female	26	Pound	(b) (6) is a mixed breed, part Chihuahua, from her appearance. She has been eating Chicken treats for some time with no noted negative effect. A couple of weeks ago, we bought a new container of chicken breast fillets. She did not seem to eat these treats with her usual gusto, sometimes leaving them uneaten. My wife and I both noted this. My wife first noted that (b) (6) was taking longer to urinate than usual, perhaps a week and a half ago. She wondered if (b) (6) was developing a bladder infection at that time. (b) (6) became lethargic, began drinking remarkable amounts of water and urinated with much greater frequency over the next couple of days. Most remarkably, she stopped eating. (b) (6) loves food, so this was very unusual. We took her to the vet and told them that we suspected a UTI. They gave (b) (6) an antibiotic shot, took urine for analysis and sent us home with oral antibiotics. The urine came back quite dilute, with no bacteria found, but with trace glucose. The vet then suspected diabetes and tested her blood, but the blood glucose was normal. A second urinalysis found a greater amount of glucose than the first test. They then tested for Addison's and that came back negative. Then they asked if (b) (6) has been eating chicken treats, as they suspected that this was Fanconi syndrome (b) (6) eats a lot of these treats, so the vet suspects that this is what we are dealing with. Over the next several days, we force fed (b) (6) but she's been rebounding. She's still drinking and urinating more than usual, but she will willingly eating baby food, so her appetite is definitely better. I suspect that she will make a full recovery, but I wanted to add our case to the body of evidence suggesting that these dog treats are a hazard.

Dogswell Mellow Mut Chicken Breast Jerky	Dog	Coonhound - Treeing Walker	4	Months	Male	35	Ounce	Purchased jerky on a Wed evening. Gave each dog 1 treat that night & 1 again the next morning before leaving for work. By Thurs afternoon after work, the 4 month old dog was listless, vomiting & had diarrhea. The 2 1/2 yr old dog had mild diarrhea. Since I work in natural health field, I administered activated charcoal & coconut water to hydrate puppy. He slept several hours, not responding to any attempts to feed him. I even had to carry him outside, since he did not have enough strength to go through the doggy door. By Friday morning, he showed significant improvement, but not 100% yet. Friday afternoon he only made it 2 blocks on their walk before having been brought home to rest. He had another jerky treat night. Saturday morning he was once again listless and barely moving. He felt warm and was back to vomiting and diarrhea. Again, I administered the charcoal & coconut water solution, giving him an extra ounce to absorb all the toxins. My husband noticed that the jerky was still in the stools & not digesting. So, we discontinued the jerky treats. By Saturday evening, he was once again back to moving around and playing. By Sunday, he seemed fine. It is now Tuesday, April 30, 2013 and both dogs are perfectly fine and back to normal behavior. After doing some research on the treats, I discovered several sites that showed other pet owners complaining of similar symptoms...some even worse--death of the dog. I immediately returned the jerky treats to the store.
Kingdom Pets Chicken Jerky	Dog	Shepherd Dog - German	3	Years	Female	80	Pound	<p>April 26, 2013</p> <p>I sent the following email to KingdomPets regarding their Chicken Jerky product:</p> <p>"I am a former Animal Health Technician (Vet Tech) and have recently discovered Kingdom Pets Chicken Jerky dog treats are making my three dogs ill. Although your testing may show they are safe, and it may even show there are no antibiotics, there is "something" in them that make my dogs either have runny stool and diarrhea or they vomit, and I have photos. There is no doubt from the photos exactly what is in the vomit.</p> <p>I have tested my dogs myself, giving them the jerky once each night only to discover their horrible looking stool a couple of days later, then I stopped giving them the treats while feeding them the exact same food for three days straight and their stool returned to normal. I then again began feeding all three dogs the Kingdom Pets Chicken Jerky and the nasty stool and diarrhea showed up again. Last night, April 22, 2013, one of my German Shepherds couldn't take it anymore and she's the one who threw up the chicken jerky all over the bed. Many people have warned you about this, even as far back as 2007 from what I just found in an online forum, so hopefully you'll soon begin to take this seriously.</p> <p>Maybe it isn't life-threatening, I don't know, but I do believe, given my medical background in Animal Health, that your chicken jerky could possibly kill a smaller breed dog than my own. I have large German Shepherd Dogs and an Australian Shepherd who can tolerate ingesting tainted food better than smaller dogs since the ratio of what I give them (one chicken treat per day) compared to their body weight is relatively large. If a smaller breed dog eats one of your chicken jerky pieces per day, that could possibly do him in.</p> <p>PLEASE stop ignoring this problem. I have alerted Amazon.com where I recently purchased your Chicken Jerky and they have refunded my purchase price so I'm not asking for any money back. I do still have one of the two bags left if you want to send a return prepaid label so you can test it, please let me know. I hope Amazon listens to what I and many others are telling you and they no longer sell Kingdom Pets Chicken Jerky. I know of several people who are going to contact their local media as well.</p> <p>Thank you for your time."</p>
Happy Hips Duck Breast								Cut open the bag of treats and it was filled with ants. Threw the bag in the sink and drowned the ants in hot water. Threw the treats away. Bought the bag the day before and it was unopened.
Dingo Chip Mix	Dog	Retriever - Labrador	2	Years	Female	74	Pound	We purchased a bag of Dingo Chip mix at Wal-Mart. It has rawhide chips and chunks of chicken from China in it. We gave her one and several hours later another. (b) (6) went completely off her food. She started consuming large quantities of grass and throwing up. She became lethargic. We took her immediately to the vet who x-rayed her stomach to see if she had a blockage. She did not. He did a complete blood workup including a CBC, electrolyte panel, and vet chem 17. Everything came back normal. He gave up Cerenia tablets for nausea. (b) (6) didn't eat at all the next day, but the day after that, she started eating again. We were at a loss as to the cause of her stomach problems. I looked to see if her dog food, Buffalo Blue, might have been recalled. It was not. The only thing that was changed in her diet was the Dingo Chip Mix. I did read the recall and warning on chicken from China in pet food. I checked the package of the Dingo Chip mix and saw it was from China. I can only assume the chicken was the culprit. Get this: the package came with a warning which read, "Caution: Feed as a treat or reward once per day. For supervised consumption only. Select a chew slightly larger than your pets mouth. Discard chunks or fragments. Always provide plenty of fresh drinking water and visit your veterinarian regularly. Wash hands thoroughly after handling." Why would I have to wash my hands after handling unless it was tainted? I am very mad that you have let this problem go on since 2007. I had no idea that chicken from China could make my dog sick. If this was a human problem, it would have been banned as soon as possible. You are putting pets at risk of serious illness or death by letting this be imported from China.
Sweet Potato Snacks for Dogs	Dog	Chihuahua	8	Years	Male	8	Pound	Dogs were given treats from China and developed PU/PD. Fanconi Syndrome was diagnosed in one dog. The other dog was not seen due to financial constraints.
Cadet Gourmet Duck Breast	Dog	Retriever - Labrador	6	Years	Female	75	Pound	After a minor leg injury at the beginning of March, (b) (6) started losing her appetite and was very lethargic. Was on Rimadyl for injury, but we thought it was upsetting her stomach. Quit, and took Tramadol instead. Chalked up lethargy and loss of appetite to injury and inactivity. She then proceeded to drink large quantities of water, and urinated a lot. Continued to not eat. Had diarrhea and vomiting up mostly water. Animal hospital did not feel that the meds had anything to do with her illness, she had been off of them for a while before these symptoms all showed up. Injury on leg healed in meantime. Took her to Banfield, their test results indicated she had glucose in urine, but not blood. Liver and kidney values quite high. Liver function test normal. They couldn't see anything abnormal in ultra sound. Treated with antibiotic in case of infection. Urinary tract infection test negative. (b) (6) stopped eating the duck breast when her appetite diminished, so hasn't eaten any for about 4 weeks, and have finally seen an improvement in her overall health starting April 14, 2013.
WAGON TRAIN CHICKEN JERKY TREATS CANYON CREEK JERKEY TREATS	Dog	Hound (unspecified)	10	Years	Female	86	Pound	I noticed growths coming under her fur . Also the dog started acting very strange , confused. I read about the chicken jerky treats that were recalled from China which I was giving her. Her condition has worsened she now has a mass in her stomach and possible mass in her brain. My dog had no previous problems except hip Dysplasia which she was born with. There is blood behind her retinas and the dr. said that there is nothing they can do for her

True Chews Chicken Jerky Fillets 100% Natural	Dog	Poodle - Medium size	9	Years	Female	24	Pound	On April 6, 2013, I purchased a bag of True Chews Chicken Jerky Fillets for my dog that claim they are made in America on the bag. At the time I gave her one treat on April 7, she was healthy and not ill at all. The following day, April 8, 2013, she began vomiting, had diarrhea with BLOOD and would not eat. She had a BRIGHT RED BLOOD on her rectem after defecating which I wiped off with tissues. She was sick and listless for two days. She refused all food for almost two days and only ate her dog food the night of the second day. I am aware of the issue with the chicken jerky made in China. My dog had similar reaction as I stated above after eating the Wagon Train and Milo Brands jerky. I was told by my Vet not to feed her anything from China. So I specifically avoided them and looked for American made jerky. I have given her other American made brands with no sickness. Then I found the True Chews Brand and decided to try it. Apparently, there is a problem with this American made product as my dog had a similar illness but with more intense reactions that she had when she ate the Chinese manufactured brands. This American made product needs to be looked at as they are an health risk for dogs and are being touted by the company as "100% natural and made in America" giving the dog owners a false sense of security that their dog will not become sick because they are not made in China. They are also charging a significantly higher price for their "natural" product which also gives the consumer a false sense that you are getting a better, safe product. I paid \$11.99 for a 12 ounce bag. This bag was purchased at the Petsupermarket store located on 1938 State Road 44, #40, New Smyrna Beach, FL 32168. The stamped number on the bag is 0523IND0703, Best by 07/2014. UPC code is 031400038126. Thank you
Waggin Train or Canyon Creek Ranch chicken strips	Dog	Terrier - Jack Russell	10	Years	Male	15	Pound	became lethargic, had sickness and diarrhea. Kidney failure
FULL MOON CHICKEN BACON *KITCHEN-CRAFTED NATURAL DOG TREATS*								On Friday, 04/12/2013 @ 21:18:22, I purchased two packages of "FULL MOON CHICKEN BACON" (Arthur Pet Products) from Wal-Mart in Jacksonville.  RECEIPT says: "ST# 0024; OP@ 00000017; TE# 09; TR# 04078" Packaged states the following on the Back of the Package: "BEST IF USED BY 12/20/2014 2355-CH88  As soon as I arrived home, I opened the package. As I started to reach in to package, I noticed that the color was odd. I did NOT touch inside the package. As I looked closer, I realized that I was look at green and other colors that appear to be a bacteria or fungus growing in the previously sealed package. I opened my second package, but it did not look contaminated. It has the same Lot # on the back, although the package labeling appears to be from a different machine.
Dentley's Wrapped Rawhide Sticks with Real Chicken	Dog	Maltese	2	Years	Female	18	Pound	(b) (6) was chewing rawhide bones wrapped with Chicken Jerkey made in China and distributed in USA by both Dentleys and Smokehouse. (b) (6) started to become very lethargic and then started skipping meals. Within 2 weeks she stopped eating all together. She will consume no food at all and just sleeps all day. I took her to the vet and they ran tests on her. They found sugar in her urine but she does not have diabetes. She was hospitalized for 2 days and then released to my care. She is on 8 pills per day and has suffered severe kidney damage. She is still not eating but 3 or 4 bites of food per day and still sleeps all the time. She was a housetrained dog prior to giving her these bones but now she cannot hold her urine and will urinate wherever she is in the house with no warning. She is extremely sick at this time and it has cost me over 1400.00 so far with more bills to come.
Waggin Train Wholesome Chicken Jerky Tenders	Dog	Retriever - Labrador	12	Years	Male	84	Pound	Opened a 40oz bag of Waggin Train wholesome chicken jerky tenders and feed two jerky treats to the dog at 7pm, by 9 pm the dog was throwing up and by 10 pm was very weak and would not get up. He would not take food or water or get up for nearly two days. When he did finely get up to go out side he appeared very weak. This occurred on a Friday nite and by Monday morning he was up and moving around albeit slowly, his appetite did not return until the following day (Tuesday). The vet was out of town. I live in a rural area.
Canyon creek sweet potatoes	Dog	Terrier - Yorkshire	4	Years	Female	10	Pound	vomiting,runny bloody mucousy stools, constant drinking and urinating all over the house, dehydrated (had to have IV's), very weak, didn't eat, bloodwork showed elevated red blood count so did xrays and ultrasounds thinking she had cancer (shaved her fur), thought she had diabetes cause of bloodwork showings,symptoms of fanconi disease. We spent almost \$4,000.00 on her right before Christmas 2012. Now shows some signs of allergies with itching and licking constantly.
Milo's Kitchen Chicken Grillers	Dog	Collie - Border	14	Years	Female	45	Pound	After a couple of months of giving her Milo's Kitchen Chicken Grillers treats she became lethargic, began drinking water excessively and urinating excessively. When she began vomiting and suffering from diarrhea we took her to the vet. Blood work and urinalysis showed kidneys failing.
Canyon Creek Apple Wrapped with Duck, Canyon Creek Ranch Duck Tenderrs	Dog	Shih Tzu	7	Years	Male	16	Pound	On 1/6/2013 (b) (6) suddenly got very ill...lethargic...couldn't walk etc... And was taken to the (b) (6) hospital where he was admitted with a fever of 105 and low white blood cell count. He stayed for two nights and was given antibiotics and fluids. They could not figure out what could have caused his symptoms. We were worried he might not make it. Just recently while in a PetCo store looking for Duck Tenders (which (b) (6) has been given approx 1 to 2 a day as a favorite treat since he was a pup) I was told about the recall on certain brands. I pulled out the receipt and realized the ones I had purchased and given to (b) (6) were purchased on 12/5 - the day before he was admitted to the hospital. I had purchased two kinds of Canyon Creek duck tender treats. In addition after (b) (6) recovered I recalled that I had to go buy another brand of duck breast treats because (b) (6) would not touch the ones that I had purchased before he was hospitalized. It just doesn't seem like a coincidence after reading the reports etc .....and finding out that the brand in question had been recalled.
Dingo Twist Sticks Chicken in the Middle!	Dog	Chihuahua	16	Months	Female	8	Pound	(b) (6) was given a Dingo Twists Stick (chicken in the middle) on Friday evening (3/29/2013). On Saturday the 30th, she became lethargic and then began vomiting. She continued to be lethargic, not eating, barely drinking water on Sunday and Monday. Tuesday, she was so sick my son took her to the veterinary hospital, where she had to be put to sleep as she was in renal failure.

Waggin Train Wholesome Chicken Jerky Tenders	Dog	Schnauzer - Miniature	11	Years	Female	27	Pound	I had been giving Truffle Waggin Train chicken jerky tenders for a long time. She became lethargic and didn't seem herself in January. I took her to the vet who did a blood test. It found her creatinine level was highly elevated and she had kidney damage. I found out that these chicken jerky treats had been recalled and I immediately discontinued them. Over the last month since discontinuing the treats, she is feeling better and is more of her bouncy self. However, she will have to be on special food the rest of her life.
Chewmaster Hips & Joints Chicken Breast with Glucosamine & Chondroitin	Dog	Poodle - Medium size	15	Years	Male	18	Kilogram	Increased urination, and increased thirst,
Canyon Creek Ranch Duck Tenders	Dog	Dachshund - Miniature	9	Years	Female	17	Pound	Not sure if tied to jerky treats, but a few weeks ago (b) (6) became ill- vomiting with diarrhea. Within 24 hours she had hemorrhagic gasenteritis and her diarrhea was nearly purely blood. She died at the vet's office after passing a huge amount of blood. This all happened within a little over 24 hours. We had been feeding all of our dogs Canyon Creek jerky treats (chicken and duck) almost daily since Christmas (we received a few large bags as gifts). My other three dachshunds became ill (a few weeks earlier) as well with same symptoms only much milder. They survived. I just happened to notice the recall today and wonder now if they had built up a toxic level of something from the jerky??? The date I listed for when the problem started refers to (b) (6) only. The other dogs were ill prior to this.
Doctors Foster and Smith All Natural Chicken Fillets Dog Treats	Dog	Terrier - Bull - Staffordshire	5	Years	Female	62	Pound	She started having diarrhea that lasted a couple of days, I did not feed her for 24 hours, then started on a boiled ground beef and rice diet for 24 hours then gradually reintroduced her regular kibble. Her diarrhea slightly improved, then got worse to the extent of going in the house and/or not making it outside. I took her to the vet, who asked about the details and questioned me about anything new added to her diet. The only thing I fed her aside from her regular meals was some Drs. Foster and Smith Chicken Fillet Dog Treats (item # 9N-37721). The doctor then told me to stop feeding the treats immediately and check the manufacturing information immediately to see if the treats were manufactured in China. I checked the treats and acknowledged the fact that they were made in china. I proceeded to throw them into the trash.
bil-jac americas vet dogs dog treats, waggin train big blast chicken wrapped pork skins	Dog	Retriever - Labrador	6	Years	Male	88	Pound	severe diarrhea, vomiting, no appetite, lethargic
Dogswell Vitality Chicken Breast with Flaxseed and Vitamins	Dog	Terrier (unspecified)	11	Years	Female	40	Pound	Animal was a 11 year-old terrier mix, named (b) (6) We first noticed that the dog had some sort of issue when she lost interest in eating, and appeared lethargic, sometime in early- to mid-February, 2013. First saw vet Friday, 2/22/2013. At that time, our vet suggested that her diet be changed in an attempt to correct the problem. We next saw our vet on Tuesday, 2/26/2013, when a complete exam including blood chemistry and urine tests were performed. Blood chemistry (partial results) revealed a BUN of 136, and a CREA value of 8.9. Urine test (partial results) showed diluted urine. X-rays and ultrasound performed, but offered little help. After results came in the next morning (2/27/2013), the dog was admitted to their vet clinic and placed on IV fluids, with what was felt was a poor to guarded prognosis. Also, at that time, first noticed that the dog's blood pressure was significantly elevated. Vet suspected chronic renal failure. Also discussed was whether dog's condition COULD have been made worse by consumption (sometime in January) of Dogswell Brand Vitality Chicken Breasts with Flaxseed and Vitamins. However, vet felt treatment would not differ significantly between treating for chronic and / or acute kidney failure, or a combination of both.) After vet detected a heart murmur when fluids were being given, we agreed to have dog transferred to 24/7 vet hospital Friday, 3/1/2013, so as to be able to consult with a doggie cardiologist, and to continue with IV fluids with vet oversight during the weekend. Good news: Blood pressure was reduced using drug therapy, but, bad news -- dog continued not to eat. Discharged to owner Monday, 3/4/2013, after referral to doggie internal medicine. Dog continued to go downhill during week, not eating, and blood taken Friday, 3/8/2013, showed "all parameters worsening and renal failure progressing." Euthanasia performed Saturday, 3/9/2013, due to "edema, anorexia, and renal failure." As FYI, vet records reflect a history of having eaten at least one Chinese-processed chicken treat that owners believe may have had added an acute stressor on already compromised kidneys. NOTE #1: The purpose of this filing is to provide FDA with a detailed case history and to offer FDA one (opened) treat package and one (unopened) treat package from the same lot, for laboratory testing, so as to possibly detect / confirm any toxins or other chemicals that may have contributed to our dog's kidney failure. Our assessment is that without a lab analysis of the subject dog treats, it is impossible to directly or indirectly link their consumption to what happened to our dog, other to say that they may have added an acute stress component to an already compromised kidney function. NOTE #2: After completing this web-based form, it's unclear whether we are giving (or not giving permission) for FDA to review all applicable / pertinent vet records. Our intent to assist FDA by full disclosure, so feel free to contact all vets listed. However, the web-based listing we provided allows us to list only three vets, and is incomplete, as we also saw three other vets at (b) (6). NOTE #3: The exact date that the adverse problem started is hard to pin-point with certainty, along with the date that the subject treats were given / consumed. The vet records for July, 2012, include a blood test panel that was normal. Perhaps kidney failure started subsequent to that date, but unbeknown to us, did not manifest symptoms until February, 2013. Also, we can not state with any confidence the precise number of treats consumed by our dog, but it was at least one treat, and perhaps more. (No more than two.) Also, the precise date consumed also can not be established except to say that it was sometime after Christmas, most likely during early- to mid-January, 2013.
Veggie Life Happy Hips Sweet Potato Chews Dog Treats By Dogswell	Dog	Retriever - Chesapeake Bay	14	Years	Female	65	Pound	Frequent urination, 3 or 4 times at least a night. Lack of control of bladder. Several accidents in the house that were very upsetting to her. Breathing heavy and panting all the time. Drinking more water.  We also during this time period purchases some poor quality products (3 bags) from the Pet Warehouse and contacted Dogswell by email regarding them. See attachment.

Kingdom Pets Chicken Jerky	Dog	Poodle - Miniature	5.5	Years	Male	15	Pound	unaware of the recall, I purchased Kingdom Pets Jerky treats from CostCo in Indianapolis IN in the fall of 2012. I did not give the dogs any until November of 2012. after feeding them the treats, my miniature poodle became ill with vomiting, excessive thirst, frequent urination, loss of appetite, and lay very still. His condition grew progressively worse and in 3 weeks, he died. I had him to vet several times during that period. He treated my dog as best he could. When I asked him what the problem was, he told me that my dog had eaten something that shut the digestive system down.
Smokehouse Duck and Sweet Potato Combo	Dog	Retriever - Golden	1.5	Years	Female	24.6	Kilogram	Vomiting all day about 2-3 hours after eating.
Waggin' Train Duck Jerkey (Nestle-Purina)	Dog	Chihuahua	6	Years	Male	6	Pound	All of the pets in the household have become ill one after the other recently. (b) (6) started vomiting and feeling nauseous about 3 -4 days prior to presentation. The day prior to presentation they noticed PU/PD type symptoms and thta he was shaking. Throughout the veterinary treatment we discovered that he became acidotic, had glucose and ketones in his urine. All pets also had some degree of shaking during their illness. Symptoms were suspicious for Fanconi's syndrome for all three affected pets in the household. The only food in common for all of the affected pets were the Duck Jerkey treats.
Waggin Tails Duck Jerky (Nestle-Purina)	Dog	Chihuahua						Pet became polyuric, polydipsic recently and started vomiting not long after. This pet started clinical signs similar to two other dogs in the household who both became very sick. (b) (6) also started having diarrhea today and is not interested in eating. All of the dogs also had various degrees of shaking during their illness. After multiple days and visits the dogs were diagnosed with Fanconi's Syndrome and had acid/base imbalances and glucosuria with a normal blood glucose and hematuria with a secondary bacterial infection.
Milo's Kitchen Chicken Grillers	Dog	Papillon - Spaniel - Continental Toy (with erect ears or with dropped ears (Phaléne))	4	Years	Female	6.9	Pound	I had been feeding (b) (6) Milo's kitchen chicken grillers for 6 months prior to her death. She had consumed almost 2 full large bags before she got sick. In the beginning of October she began vomiting more frequently. I also noticed she had been urinating more frequently. On October 17th, in the evening, (b) (6) squatted to pee and nothing came out. She then began squatting over and over again and nothing came out. I took her to the vet first thing in the morning. The vet diagnosed her with a UTI and put her on an antibiotic October 18th. By the evening friday, (b) (6) was very lethargic, she would not eat/drink anything, and she was clearly uncomfortable. Saturday morning I woke up at 7am and she was hiding under my bed shaking and her breathing was labored. I rushed her to the vet. The vet took blood and informed me that she was in renal failure and the toxins were building up in her body and that the kindest thing for me to do at that point was to put her to sleep because she was reaching a level of toxicity that would begin seizures and brain damage. I had to put her to sleep that morning, October 20th, 2012.
Canyon Creek Ranch Natural Chicken Tenders	Dog	Mixed (Dog)	3	Years	Male	16	Pound	9/8/12 Dog had vomiting and diarrhea, was lethargic. Treated with Metronidazole, FortiFlora, Purina K9EN. Recovered and returned to normal diet of cooked chicken and rice, lam's Premium Protection dry food, and Canyon Creek Chicken Tenders. 10/9/12: Dog developed terrible itching problem and tore his fur out. Treated with Betagen topical spray. Dog continued to have chronic and intermittent diarrhea over the next several months which I treated with Immodium. I kept him on his normal diet. 1/17/13 Dog had continuous diarrhea for 5 days previous, was eating grass, and reached a point where his bowel movements were mucous and grass. Treated with Metronidazole, Panacur Oral Suspension and Purina K-9EN for approximately 25 days. Dog has now been transitioned to Science Diet Canned Food, continues with lam's product and Pupperoni for treats. Both of my dogs the one reported in this case, and a mixed breed, 7 year old, 29 pound dog suffered the same gastrointestinal events during the time periods and were treated similarly. On this last adverse event, the older dog recovered when treated with Immodium, but was also switched to the identical diet on 1/17/13. I contacted Purina and was told to destroy the product, even after I requested that they allow me to send it back for further testing. I retained the product until their 3rd party claims administrator from Sedgwick CMS also told me that no testing would be done. I discarded 18 bags of the product on 2/13/2013. I was told today by Sedgwick that (b) (6) medical records have been provided to the FDA for review and that they reported chronic, intermittent diarrhea. I am submitting this report to ensure that you have accurate information.
Waggin Train Ducky Jerky Filets	Dog	Chihuahua	5	Years	Female	3	Pound	(b) (6) was a very healthy Small Chihuahua. Vaccinations up to date. Only fed fresh boiled chicken breast cooked daily & these Jerky Treats. Over one year ago she had a GI Bleed of unknown origin. She received IV Fluids & medications for one day due to dehydration. This was her first non well adverse event.
Dingo Wagn' Wraps Meat in the Middle	Dog	Mixed (Dog)	8	Years	Female	50	Pound	On March 4 around 21:00 EST we gave our dog a Dingo Wag'n Wrap. From 23:00 est she started crying to go outside - about every 2 hours through the night. We let her out of our house without a leash and did not know she was sick. On March 5 we went to work and when I arrived home at 18:00 est my dog had vomitted and had diarrhea in every room of our house. At last count there were at least 15 'messes'. (Some piles were difficult to determine if it was vomit or diarrhea). Our vet advised to take away all food and water through the night, which we did. The diarrhea continued throughout the night and next morning. We took her to the vet on March 6 and she was given the following medications: Metronidazole 250 mg Diphenoxylate/atropine (1/0.1) mg/1.5ml Endurosyn Canine As of the time of this report, our dog is still recovering. She continues to have diarrhea but it has slowed down and is slowly starting back on small amounts of food and water.

Kingdom pets chicken jerky	Dog	Cesky Terrier	9	Days	Female	18	Pound	Bloody diarrhea ,throwing up,crying, stop eating, shaking
Cadet Real Meat Choice Chews	Dog	Poodle - Medium size	2	Years	Male	20	Pound	(b) (6) and another dog (b) (6) were given a bully stick as a treat on Fri. Mar 1. (b) (6) became ill on Sat. with vomiting and diarrhea. (b) (6) became ill on Sunday with the same symptoms. (b) (6) was with (b) (6) on Friday when they ate the bully sticks, but was elsewhere for the rest of the weekend, so they did not eat the same food or treats after Friday. Both dogs
Cadet Real Meat Snack Gourmet Premium Choice Chews	Dog	Poodle - Standard	3	Years	Female	45	Pound	(b) (6) was given a bully stick on Friday, March 1 and became sick on Saturday. She vomited Saturday morning and had diarrhea. Her stomach made loud grumbling sounds all day. She was somewhat more lethargic than usual. By Sunday she was feeling better.
Milos kitchen	Dog	Poodle - Miniature	9	Years	Male	21	Pound	While feeding (b) (6) Milo's Ktchen Treats since 2011 before product (b) (6) was taken off shelf. (b) (6) was experiencing bloating vomiting, and increased water consumption, decreased appetite, I had to take him to the vet..Thought he had a condition called cushings disease, but no positive tests..had to return because of same conditions..including diarrhea..started treating for enlarged liver , heart complications, and coughing
Dogswell Veggie Life Happy Hips with Chicken & Sweet Potato, Dogswell Veggie Life Vitality with Chicken and Apple	Dog	Chihuahua	2	Years	Female	10.5	Pound	My dog consumed a Dogswell Veggie Life Vitality treat with chicken and apple at approx. 7:45pm on 2-18-2013. At approx. 9pm my dog vomited up this treat and went into shock losing all bodily functions just minutes later. She was treated barely concious with only a faint pulse by an Emergency animal clinic at 9:30 pm the same day. (b) (6) started internally bleeding and was given plasma early the next morning to rescue her from bleeding to death. She spent the next two days at an animal hospital and returned home on2-20-2013 in the afternoon recovering and doing much better.
Full Moon Chicken Jerky								Purchased Full Moon Chicken Jerky at a Walmart in Brownwood,TX on Feb 23,2013. When I opened the package on 2/27/2013 I noticed that there seemed to be a film on the jerky. After taking jerky out of package it was very apparent that there was green fuzzy mould growing on the jerky. The date on the package was best by 07/2015. I did return the product to the store for a refund.
dogswell veggie life happy hips with glucosamine and chondroitin, Chicken & Biscuits Tasty & Rewarding Treats, Authority Chewy Dog Treats Chicken Jerky	Dog	Maltese	7	Years	Male	9	Pound	Patient presented for routine health check-up. Bloodwork and U/A were done as a health screen. The patient had asotemia, glucosuria without an elevation in blood glucose. Urine was sent to UPenn for the Fanconi syndrome test. This patient tested positive. Bloodwork one year ago also had asotemia with normal U/A.  Upon further investigation to the owner, this patient has recieved multiple jerky treats over the past year. She gave me 4 of the current bags of treats she was feeding. These were not the only ones the patient had recieved over the past year.  Dogswell Veggie Life Happy Hips chicken and apple xt122108a4 to4o 37oopfo1o a01/185 I cannot tell between 0 and o sorry PCI mini chicken and biscuits exp/lot 050115a and 060515b authority chicken jerky bb140702nt 4120701  She has stopped feeding any treat from china and we plan to recheck the fanconi's test in 2-3 months.
Boots and Barkley beef rawhide beef jerky strips	Dog	Dachshund - Miniature	3	Years	Male			My dog had recently went in for a check up with the vet. He was in perfect health. A coupel weeks later, he got sick. Diarreah, vomiting, and eventually just mucousy blood coming out of his rear, and slight fever. He is finally eating normal food, and off medications.
Waggin' Train Chicken Jerky Tenders	Dog	Greyhound	9	Years	Female	73	Pound	Opened a new bag of Waggin' Train Chicken Jerky on Jan. 13, 2013. Gave 2 treats/day. On 1/15 she stopped eating. On 1/16 she had diarrhea & vomiting. Took her to our vet on 1/17. Told me the treats made in China have been reported to kill hundreds of dogs, and make others very ill. Gave her fluids, blood work, an injection to help settle her stomach and asked that we bring her back on 1/19 for further treatment. Blood work came back that her kidney function levels were at an extremely high level (27). On 1/18, (b) (6) could not eat, drink or walk. I am oxygen dependent, it was late in the afternoon, and I am unable to carry our greyhound from the house to the car. I did call our vet to report this problem. Luckily..by late that evening, she was able to walk a little. She received 300ml of fluids at the vet on 1/19. I reported the problem & filed a claim. I believe that Purina should be responsible for paying the vet bill of \$228.00. If not for those treats, she would not have gotten so violently ill.
Canyon Creek Ranch	Dog	Terrier - Rat	13	Years	Female	19	Pound	I need to change the name of the treats on my initial reoprt. Case ID number is 16102. The name is Canyon Creek Ranch.

Cadet Gourmet Duck Brest	Dog	Chihuahua	3	Years	Female	6	Pound	(b) (6) had the Cadet Duck Jerky Treats we had recently purchased from Costco on Thursday, and one more on Friday. Saturday morning, she immediately had diarrhea, and it had continued through the day. Through the night it got worse, and (b) (6) had then started to vomit frequently as well. Sunday and Monday this both continued, with tar-ish like stool with blood present, as well as persistent vomiting. We have a vet appointment for her tomorrow, but (b) (6) has never had an issue with food or anything ever, so to watch this is completely heartbreaking. Our Rhodesian Ridgeback mix (80 lbs Male Neutered 5 years old) also had diarrhea Friday night, and loose stools Saturday Morning, which no table food or alternate food was given to either one of them. (b) (6) has still not recovered and is very ill.
Nature's Deli Chicken Jerky Treats	Dog	Siberian Husky	2	Years	Female	66	Pound	I purchased 2 bags of the Nature's Deli Chicken Jerky Dog Treats from your Sams Club approx 1-11-21. My 2 Siberian Husky rescues became sick within days with severe diarrhea and vomiting. I took the bag of jerky treats to my vet along with my 2 dogs on 1-25-13 as my dogs still had diarrhea and this was the only thing different food or treat wise my dogs had. After paying for tests, medicine and vet bills, I went to my Sams Club and returned the one bag I did not give my dogs and filed a written complaint. I was supposed to be contacted with a follow up call. I have not received that phone call but again while at the Sams Club 2-24-13 I noticed this product that made my 2 beautiful dogs so ill was still on the shelves. I informed several customers myself of what my experience had been. I received a letter today dated 2-19-13 from Frank Yiannas Vice President of Sams Club Food Safety that the product had been recalled 2-19-13 but yet I still received no call after registering my complaint and the products were still on the shelf 2-25-13 at the West Broad Street location in Richmond, VA. (b) (6)
Wagon Train	Dog	Terrier - Rat	13	Years		19	Pound	I bought Wagon Train Treats at PETCO. I started noticing that my pet started throwing up and having diarrhea. She would not eat and was sad and moping around. So I took her to the vet and they asked me an arsenal of questions. Then it got to the part of the treats. The vet asked me what kind I was giving her and I told her Wagon Train. She said some them treats had a recall (b) (6)
Waggin Train Chicken Jerky Tenders	Dog	Dachshund - Standard Smooth-haired	12	Years	Female	18	Pound	We started giving our dogs (which are like kids to us) Waggin Train Chicken Jerky as treats in October 2009. In October 2011, we traveled with (b) (6) as which time she got sick and vomitted in the vehicle. I dismissed it as car sickness (which she never had car sickness before) but...as the weekend went on she became very unattentive, sleep alot, drank alot and was still vomiting. As we got ready to leave, (b) (6) fell down the step of the porch and was very lethargic, getting sick again on the way home. I took her to the vet the next morning where she was admitted to the doggy hospital, placed on IVs for 4 days. The vet diagnosed her with diabetes. We started her on insulin shots 2 times a day and a very strict diet but we still gave her the chicken jerky treats as a reward for doing good at taking her shots. Unaware of the recall, we purchased our last package in September 2011, which (b) (6) continued to receive on a daily basis, sometimes 2 a day. We had trouble getting her sugar level regulated and decided to stop all treats as of January 2012 that were processed & I started cooking all of (b) (6) food to include treats. At which time her sugar level seemed to be leveling out, then in November 2012, she became worse, wouldn't eat, drank lots, sleep lots, very loose stool, and seizures started. Everytime she would vomit or go potty she would have a mini-seizure then while at the vets office she had a very bad seizure, I didn't think she was going to pull out of this bad one but she did. The vet checked her kidney function and other levels and told us "she is a very sick girl, that her kidneys were shutting down which was causing the seizures and that the most humane thing we could do for her was to put her to sleep". This was the hardest decision I have ever had to make. It broke my heart. I believe that (b) (6) may have been diagnosed with diabetes when in fact it was Fanconi Syndrome cause by the chicken jerky treats. I miss sweet (b) (6) everyday.
Boots and Barkley Colorado Naturals Nature's Deli milos kitchen waggin train natures variety honest kitchen mwelness dog food dogs well								The pet store in my town of Warwick, NY (address: Hometown Pet Supplies - 48 Ronald Reagan Blvd. Warwick, NY 10990 ) continues to sell several chicken jerky teats and dog/cat foods, that have been recalled by the FDA, at a discounted price. I have even brought this up to the employees and nothing has changed. I want the products removed and disposed of properly so no more pets are harmed! Please help sooner than later, this is a very urgent matter. Thank you.
Colorado naturals salmon jerky dog treats	Dog	Retriever - Labrador	3	Years	Female	45	Pound	Was given Colorado naturals salmon jerky throughout a weekend agility trial, Thursday-Sunday . Monday she developed diarrhea-large, frequent, loose stools with mucous
Bixbi hip and joint chicken breast jerky	Dog	Crossbred Canine/dog	7	Years	Female	50	Pound	I gave my dog (b) (6) hip and joint chicken breast jerky. She started to have diarrhea and seemed to be warm (temp?). She still had an appetite, but it started after she got a full strip of "treat". I have since cut back on the amount thinking it was too strong. When opening the bag this morning to give her a small amount the bag smelled like rancid oil. I have taken it back to the store I bought it at.
Canyon Creek	Dog	Spaniel - Cocker English	7	Years	Female	28	Pound	I do not want to place blame on her current health issue, but I wanted to report it just in case it could be pertinent to the investigation. Because (b) (6) battled an anemia problem, I made sure to get her the healthiest food and treats possible. Thus, I thought chicken or duck treats in sweet potatoes would be perfect. Now it turns out that these treats are linked to kidney failure. In late November of 2012, she was diagnosed with advanced kidney failure. Again, she had many other health issues, but I wanted to report the possible correlation between her eating the treats (usually from Canyon Creek, which is now on a recall list) and her kidney failure.

Smokehouse Brand Pet Products - Chix Mix	Dog	Terrier - West Highland White	4	Years	Male	17	Pound	The only new food we introduced to our dogs diet in the week leading up to the illness was 'Smokehouse Brand Pet Products Chix Mix.' He was not fed more than one treat per day over the course of maybe three days. This morning he had diarrhea. After the diarrhea episode he had blood around his bottom and down his legs. Shortly after he through up a bloody mixture of stomach acid and blood. This happened twice before we took him to the vet. While at the vet through up blood in front of the vet and she was VERY concerned. After a day spent at the vet and \$500 we have him home recovering.
Dingo® Dental Bones For Total Care	Dog	Terrier - Rat	9	Years	Male	12	Pound	My dog began vomiting at around 7:00pm on Monday, February 4, 2013. He continued to vomit throughout the night, at least once per hour. He became very lethargic and would cry out in pain if touched. I took him to the vet the next morning when he had not improved. He was on IV fluids all day and put out < 2cc of urine, and that urine was mostly blood. The blood tests revealed that he was in complete renal failure. The veterinarian told me that he would die within 24 hours due to his complete loss of kidney function, and that my best option was to have him euthanized because he was in pain and would continue to get worse as death grew closer. Prior to this, he was a happy and healthy indoor dog. He was playful and loving, and I took care of him as if he were my child. He was on a diet of Blue Buffalo Brown Rice and Lamb formula, and he was not allowed any table scraps or other foods. I recently began feeding him "Dingo Dental Bones For Total Care Minis" at a rate of about one bone per day or every other day. This is the only product out of the ordinary that he came into contact with.
Jerky Time Treats - Chick Jerky	Dog	Schnauzer - Miniature	3	Years	Female	20	Pound	Did not eat for 6-7 days, vomited twice, depression. Took her to the vet twice and vet diagnosed with possible pancreatitis which is common in the breed. We treated this in that way with reduction of fat content which I repeatedly told the vet was not right to begin with. Nikki has recovered, Thank God, but I am not totally convinced it was pancreatitis. It may have been this chicken jerky recall from China, I was giving this to my dogs in the evening. The other two dogs did not get sick so it may not have been the jerky, no way to know, and only time will tell if it is a recurrent problem with pancreatitis.  Hope this helps.
Nature's Deli chicken jerky treats	Dog	Terrier - Boston	4	Years	Female	12	Pound	I came home from Sam's, with a new bag of the Nature's Deli chicken jerky treats. In a few hours, (b) (6) was crawling on the floor in short paces, to my feet. She was crying and had a dry nose. I stayed up with her all night. Now, she refuses those treats. She has NEVER done that. Always strong and healthy. I received a recall for the treats in my email this morning, from Sam's. But, the number and date was not the same on the recall, as on the bag. Now, hers says best by 1/21/14. But, I know I gave her one when I got home, the same day she was ill. 47263 80021 5 is the upc number on this sack. She's never sick...until then. So, I'm wondering if the recall should be expanded. I read she can now carry salmonella..and it is transferable. I had a eye problem, 3 days ago. I'm not sure what to do. I say she recovered completely. But, is she a carrier now??
Waggin' Train wholesome chicken Jerky Tenders chicken Dog Treats	Dog	Chihuahua						dog ate dog treat (waggin' trails chicken jerky) everyday for 1-3 years and died of renal failure at age 8
Canyon Creek Ranch Homestyle Ham, Canyon Creek Ranch Brand Wrap overs	Dog	Mixed (Dog)	14	Years	Female	42	Pound	(b) (6) was only given treats that had no or limited ingredients. After trial and error over the past two years, we found the Canyon Creek Ranch treats were tolerated with the exception of natural treats prepared at home. I normally purchased my treats the first week of the month as it was a drive to petsmart in Henrietta, NY. My pet, (b) (6) was given several treats through out the day as reward for good behavior. She never had a problem tolerating this practice. The last purchase, my daughter and I noticed (b) (6) vomited. We withheld food for the remainder of the day, the resumed her diet including the treats the following day. Through out the weekend the vomiting persisted followed by diarrhea. Her stomach had high pitched bowel sounds audible enough that I recorded it for my Vet. I put her on pedal yet and pepto bismol for the duration of the weekend along with some broth. She was seen by the Vet and put on Reglan, Pro-Pectalin, and an oral electrolyte. She had lab tests and a fecal sample. Nothing was found to cause her illness and we proceeded to treat. By Saturday she became worse so she was seen at Cornell University Animal hospital. They repeated some tests and included some radiologic films. They also were unable to find the cause. She was given an injection and sent home. She improved within a few days and we resumed her diet including the treats. Within a day, she began vomiting and diarrhea but to such a severity that the vet was unable to determine cause and we lost our pet. She had suffered for 3 weeks.
Kingdom Pets Duck and Sweet Potato Premium Dog Treats	Dog	Mountain Dog - Bernese	8	Years	Male	80	Pound	Dog ate treat and an hour after started vomiting white foam, then vomiting white foam and drool in large piles. Dog is very lethargic and can not keep water down. Has not eaten. Symptoms ongoing last 12 hours with some yelping.
Wagon Train Chicken Jerky	Dog	Maltese	3	Years	Male	11	Pound	We got (b) (6) a bag of chicken jerky for Christmas. We did not know about the investigation so we continue to give him one every day in January I took him to the vet because he was vomiting, seemed off balance and over all did not feel well. He seemed very tired and just not himself. The vet could not seem to find out what was going on. Our dog liked the chicken chews so much we bought him another bag in February. On Saturday February 15 our dog became very ill again vomiting, watery stools, off balance. I again took him to the vet they gave him a shot to stop the vomiting but he still seems to be mooping around the house and not himself today. I wish I would have known about this sooner. I feel bad for him and feel bad I gave them to him.

Waggin' Train Chicken Jerky	Dog	Cattle Dog - Australian (blue heeler, red heeler, Queensland cattledog)	9	Years	Male	62	Pound	At presentation, the dog had a several week history of inappetance, lethargy, and some vomiting. He had been taken to another vet clinic approximately 2 weeks prior; some elevated blood values were found and a toxin suspected. The dog was given medication and improved briefly. The owner was unsure of further details of this visit and the clinic was closed at the time, so we were unable to access those records. At presentation to us, (b) (6) was overall weak and uncomfortable during examination, obese with a BCS of 4.5/5.0, and had severe dental disease. The remainder of physical exam was WNL. CBC results indicated dehydration, and chemistry panel revealed advanced kidney failure (BUN >130, Cr >12.5, Phos >16.1), as well as elevated Amylase (1821) and Lipase (1890). (b) (6) was treated on an outpatient basis with SQ fluids and Cerenia that day at the owner's request; the owner returned the next morning and requested inpatient care. (b) (6) was given IV LRS and treated with Cerenia then Famotidine throughout the next two days. (b) (6) remained inappetent and lethargic. On the first day, a urinalysis revealed protein and RBCs, and on the second day trace glucose was noted in the urine. On the third day BUN was still >130 and Cr >13.6. The owners were advised of a poor prognosis, but elected to take (b) (6) home. We were notified that (b) (6) passed away one week later. During treatment the owner advised us that (b) (6) had been eating Waggin' Train Chicken Jerky treats, starting about the time the symptoms began.
Vitalife chicken treats	Dog	Mixed (Dog)	3.5	Years	Female	96	Pound	My Dog 1st started eating Vitalife Chicken Jerky Treats in september 2011 in mid December 2011, she started becoming less active, started to not eat her food, drinking excessive amounts of water.... On Jan 8th 2012 we went for a walk and she was really active, when we arrived she peed in the back yard and her pee was a caramel color, I thought it was a urinary tract infection, our vet was only back from vacation on January 10th, he did blood work and x-rays, and told us that her liver enzymes were VERY high, and the Bilirubin in her Urine was at the maximum level, her platelets were way below normal!! We were shocked!!! By Friday she was in ICU at the Ste.Hyacinthe Veterinary Hospital the best in Quebec!!! we did liver biopsies, more blood work, Ultrasounds, we did everything to try and save her.... She developed Chronic Active Hepatitis, her vets were convinced it was something she ingested!!!! She only ate Orijen Adult Chicken formula, one of the only 6**** human grade dog food, and Vitalife Chicken Jerky strips. She died on Jan 27th 2012
Waggin' Train Chicken Jerky	Dog	Terrier - Manchester	7	Years	Male	10	Pound	We fed (b) (6) one or two Waggin Train chicken jerky treats on a daily basis for years. In April 2012, he had a normal examination at his Vet. Then he began to lose his appetite and lose weight. We watched him until it became obvious he was continuing to be sick. In early June 2012 I brought him to the vet and he was found to be in renal failure with a BUN that was very high. He was hospitalized for three days receiving intravenous fluids. Subsequently he has continued to have proteinuria and hematuria and low weight. His BUN and phosphorous have been elevated since June 2012. He is emaciated.
Beggin Strips, Canyon Creek Chicken Jerky and Duck Jerky	Dog	Shih Tzu	4	Years	Female	12	Pound	I was giving her Beggin Strips and chicken and duck jerky strips, 3-4 per day. She got severe bloody diarrhea. I took her to the vet, who put her on antibiotics. I threw out the treats. I recently started giving her some chicken and duck jerky treats again, and she has been throwing up every few days. Yesterday she threw up twice so I just threw the new jerky treats out too. I was reading the recall information and noticed that I had the ones that were recalled, but that they really weren't bad for them to eat. Well, antibiotic residue or whatever, my dog gets sick from them. She loves to eat them though. I am now going to make some chicken jerky treats for her on my own. How can you continue to say these are ok for our dogs?????
Chicken treats for dogs/ made in China	Dog	Terrier - Airedale	5	Years	Female	50	Pound	acute onset kidney disease
Waggin Train Wholesome Chicken Jerky Tenders	Dog	Chihuahua	10	Years	Female	10	Pound	(b) (6) got sick with vomiting and diarrhea from eating Waggin Train chicken jerky treats
Waggin Train Chicken Jerky Treats	Dog	Terrier - Yorkshire	14	Months	Female	2.5	Pound	On April 11, 2012, my dog (b) (6) was taken to my vet on a Monday morning and was in complete renal failure with a BUN of 400. She was immediately put on dialysis but unfortunately died a few weeks later when it was discovered upon removing her from dialysis that her kidneys had completely shut down. I have another Yorkshire Terrier, the sister of (b) (6) that had elevated BUN of 67 and another one that had abnormal pancreas enzymes on her bloodwork while being fed these products. I have since completely stopped feeding my pets commercial foods and treats. What happened was a living nightmare for (b) (6) and almost cost the lives of my other two dogs. I am completely convinced the antibiotic adulterations are what cost my dog her life and I am so angry that these companies have been allowed to use chickens and hogs that have been fed these antibiotics which are not even legal in this country and am also extremely upset that three of these companies that are manufacturing foods and treats are in violation of the bioterrorism laws instituted to protect our country. I am not sure whether or not I filed a complaint when this first started with my dog, but am filing now, just in case I didn't. You will certainly have to understand that when (b) (6) first got sick, filing a complaint was not my priority. We spent 24/7 for nearly a month trying to keep her alive and there are vets that were involved with (b) (6) care, Dr. (b) (6) for one, that feel that there is a definite link between the antibiotic residues and the death and sickening of my pets and to find out that the FDA has allowed these companies to import these products to the USA is just infuriating to me. None of us are safe if you cannot do your job. I have kept the remaining treats in frozen storage since the death of (b) (6) for further studies and also have a blood and plasma samples frozen for future studies.
Waggin Train Jerky Tenders	Dog	Retriever (unspecified)	15	Years	Male	62	Pound	After feeding Waggin Train chicken jerky treats, his red blood cells decreased to abnormally low levels, he is still sick and has increased thirst and urination. His arthritis has become much more painful. He had developed more fatty cysts that have grown exponentially since ingestion of this product.

Waggin Train Jerky Treats	Dog	Shih Tzu	4	Years	Male	12.5	Pound	We started to give our dog these treats after reading the ingrediants on the package that contained Chicken, vegetable Glycerin and Duck vegetable Glycerin listed as the only two ingrediants. We were looking for a healthy treat without all of the additives. This was the only change to our (b) (6) diet as we are very specific as to what he receives. He was 1st ill in November with diarrhea and vomiting. At that time we did not associate the treats as we thought this could be a virus? He was taken to the vet and treated with medication, fluids and sent home with a diagnosis of pancreatitis. The vet alerted us at that time it was important that we caught it so early. We watched him closely and eased him back in to the normal routine. Again giving him the treats and within 1-2 weeks he was so sick again, same symptoms but this time the diagnosis was worse and hit him much harder. He was hospitalized and was touch and go for a while. He did recover, but the vet said that was due to him being in such good health prior the exposure. As soon as I took the treats in and showed them to our vet, she knew it was the cause of the issue. She said she saw the med recall on those the day(s) before.
Milo's Kitchen Chicken Jerky / Chicken Grillers	Dog	Chihuahua	2	Years	Male	3	Pound	Pet got sick from these treats that I have been feeding to him for over a yr. I took the dog to the Vet 2x and showed signs of kidney trouble with blood test showing high in ALT / GGT results. My pet was vomiting and shows signs of increased urination along with decreased appetite. Not knowing that this product had something to do with it I kept feeding my poor little dog these treats that he loved so much, trusting in the name. This company had complaints since 2007 and there should of been something posted in regards to the treat so consumers could make up their own minds to purchase or not. Shame on this company!
Waggin TRAILS Chicken Jerky Strips	Dog	Retriever - Labrador	8	Years	Male	75	Ounce	(b) (6) was given Waggin Trails chicken jerky strips by Nestle Purina at Christmas a a present. in just 4 weeks he was completely ill and went to the vet to find he had kidney failure. He lasted only 10 more days till he died.
Milo's Kitchen Chicken Grillers	Dog	Poodle - Standard	6	Years	Male	39	Pound	My dog has become gravely ill--he originally weighed 55 lbs, has lost 15 lbs. in a month --he has chronic diarrhea, no appetite, intestinal cramping, dehydration. We have spent a month and \$4000 trying to diagnose and treat, and then I realized he had been eating the Waggin Trails Chicken Jerky and Milo's Kitchen Chicken Grillers as his regular treat prior to getting sick. There is no place on the package where it indicates the chicken came from China or I would not have purchased it. I have not received a recall notice from either Costco or Kroger regarding this, and only became aware of the problem when seeing a pet owner with similar problems interviewed on local news. I hope with all my heart that my dog survives --it is breaking my heart to look at the poor guy. I hope these companies will be held responsible for what they have done to these animals and the suffering they have inflicted on the dogs and their owners.
Waggin Train wWholesome Chicken Jerky Tenders	Dog	Spaniel - Cocker American	5	Years	Male	30	Pound	(b) (6) is having trouble controlling his urination. He is vomiting and having terrible diarrhea. I fed him several of these treats two days ago.
Healthy Promise Hip & Joint with Glucosamine HCl & Chondroitin Waggin Train Dog Treats	Dog	Terrier - Cairn	12	Years	Male	18.4	Pound	Patient presented for acute vomiting and diarrhea following administration of chicken jerky treats by owner. Patient was treated symptomatically treated with anti emetics, antibiotic and antacids. Further diagnostics were performed when the patient's symptoms continued to wax and wane. Blood work revealed severe azotemia. Bloodwork from 8 months prior had WNL BUN and creatinine. A free catch urine sample was submitted for culture and sensitivity. The patient was referred to an internal medicine specialist for more rigorous treatment. The kidney failure was managed for the next year until it was decided to euthanize due to poor quality of life.
Milo's Kitchen home-style dog treats Chicken Jerky	Dog	Lhasa Apso	3	Years	Female	13	Pound	Because of (b) (6) special diet I had to be very careful with treats that we gave her. I purchased Milos Kitchen Chicken Jerky because they had very limited ingredients and was basically just a dried chicken breast. They were given to her very sparingly. However in December she started getting lethargic, having accidents when anxious, drank water non stop, peed more often and wouldn't eat her normal food. I had to trick or coax her to eat and gave her more treats and soft dog food because it was all she would eat. We took her to the vet and they put her on an antibiotic thinking she may have a bladder infection. The antibiotics didnt help and her symptoms became worse. She would no longer eat anything and I had to force feed her but she continued to drink alot of water. She was getting weaker and weaker and more lethargic. We took her back to the vet for blood work and they didn't see anything they felt should make her feel that poorly and gave her pain pills. When that didn't help either and she only got weaker yet and lost so much weight we had to Euthanize her.

Product Name	Species	Breed	Age	Age UOM	Gender	Weight	Weight UC	Description
Chicken Jerky Premium chicken dog treats	Dog	Pekingese	11	Years	Male	13	Pound	Vomiting and bloody diarrhea
Kingdom pets chicken jerky	Dog	Mixed (Dog)	10	Years	Female	35	Pound	I fed Kingdom pets chicken jerky to my dogs, after about 10 days both dogs drank very large quantities of water. Dog #1 no longer ate, within weeks she could not stand then died. Dog #2 became disoriented, could not stand, diarrhea & went blind.
Petshoppe duck jerky premium dog treats	Dog	Poodle - Miniature	3	Years	Male	3.15	Kilogram	Dog presented with acute kidney injury and Fanconi-like syndrome. Repeated urinalyses revealed profound glycosuria and ketonuria. The dog ultimately became hypoglycemic (no other obvious cause found). Upon presentation, there was profound hyponatremia (resolved after several days of supportive care) and the dog became hypokalemic after discharge (despite IV supplementation & nutritional support with feeding tube).
chicken jerky								Bough Kingdom Pets chicken jerky treats for dogs about 3 weeks ago. Now they are covered in nasty white mold. Expiration date is 11/2014. Item#169728 (Bar code: 84713 00020). From Costco. Made in China. 48oz bag.
Nature's Deli Chicken Jerky Dog Treats	Dog	Other Canine/dog	11	Years	Female	9	Pound	(b) (6) is and has been a typically very healthy dog. In Aug 2012, she developed had diarrhea that was mostly blood, dehydration, stopped eating/drinking, lethargy - required treatment by vet/meds/fluid injection, etc, and long time until return of some semblance of normal GI function. She'd been eating Nature's Deli chicken jerky treats.
Good 'n' Tasty Triple Flavor Chews	Dog	Retriever - Labrador	8	Years	Female	90	Pound	Presented within 24 hours of ingesting chews with severe gastric hemorrhage. Unable to stabilize medically. Patient required seven units of packed red blood cells, plasma, emergency surgery to remove chews. No ulcers seen to support aspirin as primary cause of bleeding. Patient stabilized after chews removed.
Dogswell Vitality Chicken Breast with Flaxseed & Vitamins	Dog	Greyhound - Italian	3	Years	Male	25	Pound	3-4 day hx of lethargy, decreased appetite progressing to anorexia, vomiting multiple times each day. Labwork- azotemia ( BUN 103, Crea 2.8, )K 2.9, proteinuria and glucosuria
Chicken Breast Tenders	Dog	Maltese	2	Years	Female	5.8	Ounce	She started to refuse to eat after having the jerky treats. She loved the taste of them but she wouldn't eat anything else. She would vomit and now she won't eat anything. She has excessive thirst and is definitely not well. I am not sure whether there is an obstruction but the only thing she has wanted to consume in the last few days are the treats and now she is more ill than ever.

Waggin' Train Chicken Jerky								7.5yo FN Maltese, no previous significant medical history. Eats homecooked food including chicken etc. Lives with another Maltese who has been well. 2w ago owners bought a bag of Chicken Jerky (Waggin' Train) from a shop, not realising it was supposed to have been recalled until she went to CVS to buy another bag and the cashier informed her it was recalled. The other dog also ate some with no signs of illness. No scavenging or other treats. No ethylene glycol, grapes / raisins, medications or other potential nephrotoxin exposure. For 2 weeks she began to see a bit "off", and then developed 4 days of severe PUPD before she was presented to the rDVM and subsequently referred to us after a day (8/24). Fanconi Syndrome diagnosed based on glycosuria with normoglycaemia and mild ketonuria, with low USG 1.015, mild azotaemia (presumed pre-renal), and hyponatraemia, hypokalaemia, hypochlorideamia, and severe metabolic acidosis with low HCO3. Current still in hospital on aggressive supportive therapy to compensate for the massive HCO3 and electrolyte loss in urine.
PCI Brand Chicken Breast Tenders 100% Chicken Breast Fillets	Dog	Chihuahua	9	Years	Female	15	Pound	glucose in urine, no significant clinical signs
PCI Brand Chicken Breast Tenders 100% Chicken Breast Fillets	Dog	Chihuahua	10	Years	Male	9.5	Pound	Persistent glucose in urine picked up in wellness urine testing, persisting one month later. No obvious clinical signs or symptoms
PCI Brand Chicken Nibbles, PCI Brand Chicken Breast Tenders	Dog	Mixed (Dog)	7	Years	Female	13	Pound	Renal failure, Acquired Fanconi **Instructed by Vet-LIRN to submit report.
Authority Chicken Jerky Chewy Dog Treats	Dog	Poodle - Miniature	5	Months	Female	5.5	Pound	On first and second days after opening pouch, puppy had no adverse reaction. Two days later, puppy vomited heavily, including clear liquids and wholly intact pieces of Authority chicken jerky. Days later, tried a different piece in the package but very small with same reaction. I checked to make sure that the pouch included a preservation packet, and it did.
Nature's Balance treats Duck and Potato	Dog	Shepherd Dog - Australian	2	Years	Female	42	Pound	After eating Nature's Balance Duck and Potato treats, (b) (6) began vomiting and diarrhea. Diagnostic tests showed elevated liver enzymes and glucose in urine.
Hartz Oinkies Original	Dog	Shepherd Dog - German	6	Months	Male	45	Pound	Within a couple of hours after eating a Hartz oinkies, both my 6-month-old german shepherd and my 4-year-old powderpuff chinese crested had a lot of yellow diarrhea and were sick.
Priority Total Pet Care Chicken Breast Jerky, Canine Prime Duck Jerky	Dog	Shih Tzu	7	Years	Male	23	Pound	(b) (6) a 7 year old neutered male Shih Tzu mix, presented on 8/5/13 for a two week history of anorexia and lethargy.  Serum chemistry showed elevated creatinine, mild hypokalemia, hypercholesterolemia, normal blood glucose. Urinalysis showed glucosuria, proteinuria, normal urine specific gravity.  (b) (6) has received both chicken and duck jerky products made in China.  Differential Diagnosis - Fanconi like syndrome.

Waggin' Trail Wholesome Chicken Jerky Tenders , Waggin' Train Yam Good wholesome yams wrapped with chicken treats	Dog	Spitz - German Pomeranian	12	Years	Male	11.8	Pound	Beginning in late Summer 2012, I started buying Waggin' Train yam good treats and wholesome chicken jerky tenders for my 12 year old Pomeranian. We would consume 1-2 of these jerkies per day. In September/October 2012, we went for his check up at the vet, and found out he was leaking blood protein into his urine; the vet thought it was a UTI or bladder infection. He was put on medication. Throughout this time, he continued to consume these jerky treats. In late January 2013, I noticed that my dog was not eating, so we went to the vet. From that time until early April 2013, his kidneys started to deteriorate, he had a heart murmur, he was losing weight, his appetite drastically declined, and we were going to the vet's 3-5 times a week for subcutaneous IV fluids. He would have good day and bad days, but he became progressively worse as his kidneys starts to shut down. On 8 April 2013, (b) (6) died. I did a lot of research on what could have caused his kidney failure, and linked it to the treats. I stopped giving him the jerky treats in late January/early February 2013, but it appears that the damage was already done. My dog was healthy before consuming these jerkies, and he never had any problems.
Happy Hips Duck Breast w/ Glucosamine and Chrondroitin	Dog	Collie - Border	3	Years	Female	42	Pound	Our dog generally eats duck treats by another manufacturer. We purchased Happy Hips and her frst reaction was nausea and diahrrrea. We ruled out ofher food and treats for a week or so; we gave her Happy Hips last night and today she vomitted several times and has diahrrrea and malaise.
Hillside Farms Chicken Jerky	Dog	Chihuahua	7	Years	Female	5	Pound	My friend picked up some Hillside Farms Jerky Treats at the 99 cent store in (b) (6) CA yesterday Jul. 24th, 2013 for me. She brought them to me unopened. Upon entering my home, she opened the package and gave my Chihuahua one whole chicken jerky treat. Not long afterwards my dog began showing signs of lethargy (as if she wasn't feeling well.) She refused her daily walk opting instead to walk to the end of our sidewalk, and immediately return to the house and her bed. Not long after, she began licking the blanket, then the carpet and twice went outside to relief herself and eat grass. She vomited the first round of grass, and after approx. an hour woke up and began licking the blanket, carpet, kitchen floor, and returning to the backyard for more grass eating. She has since made noises and opened her mouth as if to vomit, but has not vomited since her first round. She did consume about 1/2 her bowl of water. Coughed a few times, returned to her bed and is currently exhibiting signs of a restless sleep (like a child that is ill). If this behavior continues for longer than twelve more hours, I will be seeking veterinary aid.
Shep Chicken Jerky Tender Fillet, Happy Hips Duck Breast	Dog	Chow Chow	14	Years	Female	34.7	Pound	The owners left (b) (6) at the pet sitters while out of town. it was the first time she had any chicken jerky treats, she was fed 21 brands
Dogswell Vitality Chicken Breast with Flaxseed and Vitamins	Dog	Terrier - Scottish	6	Years	Male	22	Pound	(b) (6) suffered acute renal failure. His condition deteriorated over about 3 weeks. He was hospitalized twice, for multiple days each time. We spent thousands upon thousands of dollars on treatment. In the end, he stopped responding to treatment and we had to euthanize him.

Bingo Munchy Sticks Chicken	Dog	Sheepdog - Shetland	6	Years	Female	24	Pound	Dog presented on Friday, (b) (6) with vomiting and diarrhea. Not eating. Bloodwork indicated compromised kidney function (BUN = 50). Tentative diagnosis of kidney failure and started IV fluids and supportive therapy. After 24 hours of fluids, on Saturday, July 6, BUN had actually increased instead of decreased - BUN = 140. Owners elected to continue flushing with fluids through weekend and retest. Monday, July 8, BUN had only decrease to 117. Informed owner of extremely poor prognosis and recommended euthanasia. Owners wanted to consult their homeopathic veterinarian but dog passed away on (b) (6) before the dog was transferred. Submitted to Arkansas Livestock and Poultry Diagnostic Lab for Necropsy.
Chicken Nibbles PCI Brand, Quackers 100% Natural Breast of Duck PCI Brand	Dog	Poodle - Toy	10	Years	Female	8	Pound	This report pertains to two dogs, both 10 years old. The silky terrier, (b) (6) developed severe gastrointestinal issues with much blood in her stool. She lost 2 lbs on an 11 lb body and was very sick for about a week. The poodle became sick in this same time period. She lost control of her bladder and was lethargic. She also lost 1.5 lbs on an 8 lbs frame. Her symptoms match many of the symptoms I found on the internet.....she had sugar in her urine but it was not attributed to diabetes, but her kidney's inability to function properly. They were both treated by my veterinarian who suggested we stop all treats and he put them on special digestive dog food (in addition to medication, etc). We were pretty much only giving our dogs the treats I'm reporting on. Since stopping these treats, both dogs have basically recovered. I am not sure if there is long term damage to the kidneys as they are still under observation.
Waggin' Train Wholesome Duck Jerky Tenders Duck Dog Treats	Dog	Pit Bull	5	Years	Male	85	Pound	Gave him the treat, then soon after he acted like he didn't feel well. He was lethargic and seemed like he had a stomach ache. Gave him a treat on another day....same thing happened. I decided not to give him anymore. Then yesterday I saw an article about problems with the brand. I still have the rest of the bag....let me know if you would like me to send it in for testing.
Kingdom Pets Chicken Jerky	Dog	Pug	4.5	Years	Male	20	Pound	I started giving Kingdom Pets Chicken Jerky treats purchased at Costco to my dogs starting Jan 2012 or so. After a few months of giving the dogs the treats about every other day I noticed that I would find vomit in the morning upon awakening but did not know what dog it came from. I never thought it could be the treats. About June of 2012 I started not just noticing vomit but diarrhea as well that appeared to be coming from one dog and not every night. I work and have a very busy schedule. The dogs had a vet visit and they appeared healthy and eating so I just thought my pug and/or my bichon had sensitive stomachs. About October of 2012 I witnessed all three of my dogs would vomit during the day, mostly outside when I was with them. They would eat grass. By October my kids were giving the treats to my dogs daily. All three dogs vomited but my pug was worse. I took him to the vet in October and he treated him for a bacterial infection of the stomach and we thought he would get better. I changed their food thinking it could be that but did not think it could be the treats. I did not put two and two together. They loved the treats and they perked up when they were given to them so I didn't think it could be the treats. In November my Pug started losing weight & not eating well. I took him back to the vet and he ran blood work. His kidney functions were very bad. He was treated from that point to they day we had to put down with special dog food, medication and i.v.'s. We did all that was available to save him but could not. It wasn't until I got the diagnosis of kidney failure that I started researching on the internet about kidney failure in dogs and several sites gave information regarding the connection to chicken jerky treats made in china and kidney failure in dogs. Immediately when my pug was diagnosed in November (Nov. 16) I found the info. about the treats and discontinued them. My other two dogs quit vomiting and recovered. My pug did not it was too late. I am just now submitting this report because the grief has been so bad I have been unable to submit it. I still am having a hard time reliving this while I type.

Cadet Gourmet Duck Breast	Dog	Mixed (Dog)	9	Years	Male	20	Pound	I gave my dog Cadet Duck Breast (made in China) and after a few weeks of giving him the treat, he wanted more than just 1 to 2 treats for his weight. I gave them to him and he had the following symptoms (all which are noted in your reviews on chicken jerky from china): excessive thirst, frequent urination, and most recently multiple bloody loose stools in 1 day and vomiting. He is still active. I went on line to read up on duck jerky and saw the warnings your site has. I have stopped giving them to him as of today. I do not have an outcome as of yet. I am hoping he bounces back to his old self (no bloody stools or vomiting).
Louisiana Alligator Jerky	Dog	Cattle Dog - Flanders (Bouvier)	6	Months	Female	80	Pound	Not long after giving the dogs these treats they all developed diarrhea, vomiting and one with blood in her stool.
