Installing eSubmitter on a Macintosh (May 2013)

The instructions below are for applicants that choose to install eSubmitter on a Macintosh computer.

Once this is completed, then the applicant uses the “eSubmitter-eCopies Tool Reference Guide” to continue with the creation of an eCopy that meets the technical standards.

**Steps**

1. Open Safari and click the link below to get the PureJava installer for eSubmitter:

   http://www.accessdata.fda.gov/esubmissions/ftparea/esubmitter/platforms/PureJava/Standalone/install.jar

2. Once it has finished downloading, double click install.jar and select "Open."

3. Select "Next" to continue.

13. Confirm that `/Application/esub/data` exists.
14. Confirm that `/Application/esub/output` exists.
15. Select "eSubmitter.app" to launch the eSubmitter application.
16. **WARNING**: Once eSubmitter opens, you will see the following Warning message in a pop-up window. This is the reason why we needed to create the temp folder /Application/esub/temp. However, we need to set the Temporary Location in eSubmitter to our newly created temp folder /Application/esub/temp instead of using the default file location /Users/eSub_home/temp. Select "Close" to continue.

17. Select "Next" to continue.
