Persistent hepatitis C virus replication and immunity in pregnancy
 The major goals of this project are to 1) identify the phenotype and functional profiles HCV-specific CD4+ T cell subsets that are restored in chronically infected women who control viral replication after pregnancy and 2) determine the effects of altered CD4+ T cell help on CD8+ T cell and B cell immunity and selection pressure.

Persistent hepatitis C virus replication and T cell immunity in pregnancy
 The major goals of this project are to compare HCV-specific cellular immunity and underlying immunoregulatory changes in women with and without a substantial drop in viremia in the postpartum period and to determine the influence of pregnancy and delivery on evolution of

HCV genomes and T-cell repertoire.
