NDA 207621
Troxyca ER (oxycodone hydrochloride [HCL] and naltrexone hydrochloride [HCL]) Extended-Release Capsules for Oral Use Labeling Section 9: Drug Abuse

Elizabeth Kilgore, M.D.
Medical Officer
Division of Anesthesia, Analgesia, and Addiction Products Center for Drug Evaluation and Research, FDA

Joint Meeting of the Anesthetic and Analgesic Drug Products Advisory Committee and the Drug Safety and Risk Management Advisory Committee
June 8, 2016
Outline

• Drug Abuse: Class–wide Abuse Language
• Risks Specific to Abuse of Troxyca ER
• Abuse Deterrence Testing
  – In vitro testing
  – Clinical human abuse potential studies
• Abuse Potential Endpoints
  – Take Drug Again and Drug Liking
• Types of Studies: Oral and Intranasal Abuse Potential Studies; Simulated IV Abuse Potential Study
• Summary
Section 9.2 Class-Wide Abuse Language

- Troxyca ER contains oxycodone, a substance with a high potential for abuse similar to other opioids including fentanyl, hydrocodone, hydromorphone, methadone, morphine, and oxymorphone.

- Troxyca ER can be abused and is subject to misuse, addiction, and criminal diversion.

- The high drug content in the extended-release formulations adds to the risk of adverse outcomes from abuse and misuse.

- All patients treated with opioids require careful monitoring for signs of abuse and addiction.
Section 9.2 Abuse - Risks Specific to Abuse of Troxyca ER

- Taking chewed, crushed, or dissolved Troxyca ER enhances drug release and increases the risk of overdose and death.
- If the capsules are crushed or chewed, up to 100% of the sequestered naltrexone HCl dose could be released.
- In opioid-tolerant individuals, the absorption of naltrexone HCl may increase the risk of precipitating withdrawal.
- Due to the presence of talc excipient, parenteral abuse can be expected to result in local tissue necrosis, infection, pulmonary granulomas, and increased risk of endocarditis and valvular heart injury.
Abuse Deterrence Studies

• In vitro laboratory tests were performed to evaluate the effect of different physical and chemical conditions intended to defeat the extended-release formulation.

• When Troxyca ER is crushed and mixed in a variety of solvents, both oxycodone HCl and naltrexone HCl are simultaneously extracted.
Clinical Abuse Potential Studies

- The abuse potential of Troxyca ER when crushed was examined by the oral and intranasal routes. A third study was conducted with IV administration of simulated crushed Troxyca ER.

- **Take Drug Again** was measured on a bipolar 100-point Visual Analog Scale (VAS) where 0 represents strongest negative response (definitely would not take drug again), 50 represents a neutral response, and 100 represents the strongest positive response (definitely would take drug again).

- **Drug Liking** was measured on a bipolar 100-point Visual Analog Scale (VAS) where 0 represents maximum disliking, 50 represents a neutral response (neither like nor dislike), and 100 represents maximum liking.
Oral Abuse Potential Study Design and Results

• In a randomized, double-blind, active- and placebo-controlled study, 31 non-dependent, recreational opioid abusers received all six of the following treatments by the oral route:
  – crushed 40 mg Troxyca ER in solution, crushed 40 mg immediate-release (IR) oxycodone HCl in solution, intact 60 mg Troxyca ER, crushed 60 mg Troxyca ER in solution, crushed 60 mg IR oxycodone HCl in solution, and placebo.

• Oral administration of crushed 40 mg Troxyca ER was associated with statistically significantly lower means and medians for Drug Liking and Take Drug Again compared with crushed 40 mg IR oxycodone HCl and statistically significantly lower means and medians for Drug Liking of Troxyca ER 60 mg compared to crushed 60 mg IR. The Summary Statistics are shown in the following table:

Intranasal Abuse Potential Study Design and Results

• In a randomized, double-blind, active-and placebo-controlled study, 27 non-dependent, recreational opioid abusers with experience with intranasal administration of opioids received all four of the following treatments by the intranasal route:
  – crushed 30 mg Troxyca ER, crushed 30 mg IR oxycodone HCl, crushed placebo sugar spheres, and crushed placebo lactose tablets.

• Intranasal administration of crushed Troxyca ER was associated with statistically significantly lower means and medians for Drug Liking and Take Drug Again compared with crushed IR oxycodone HCL. The Summary Statistics are shown in the following table.

Simulated IV Abuse Potential Study Design

- This study compared 20 mg IV oxycodone HCl in combination with 2.4 mg IV naltrexone HCl (to simulate parenteral use of crushed Troxyca ER) to 20 mg of IV oxycodone HCl and placebo in 29 non-dependent recreational opioid abusers.

- Intravenous administration of oxycodone and naltrexone showed statistically significantly lower mean and median Drug Liking and Take Drug Again Emax scores.
  - Drug Liking median score was 51 for Troxyca ER compared to oxycodone alone median score of 97.
  - Take Drug Again median score was 50 for Troxyca ER compared to oxycodone alone median score of 81.
  - 90% experienced some reduction in Emax of Drug Liking with simulated parenteral use of crushed Troxyca ER compared to IV oxycodone.
Summary

• The in vitro and pharmacokinetic data demonstrate that crushing Troxyca ER pellets results in the simultaneous release and absorption of oxycodone HCL and naltrexone HCL. These data along with results from the oral and intranasal human abuse potential studies indicate that Troxyca ER has properties that are expected to reduce abuse via the oral and intranasal routes. However, abuse of Troxyca ER by these routes is still possible.

• Additional data, including epidemiological data, when available, may provide further information on the impact of the current formulation of Troxyca ER on the abuse liability of the drug.

• A human abuse potential study of intravenous oxycodone HCl and naltrexone HCl to simulate crushed Troxya ER demonstrated lower Drug Liking and Take Drug Again Emax compared with oxycodone HCl alone. However, it is unknown whether these results with simulated crushed TROXYCA ER predict a reduction in abuse by the IV route until additional postmarketing data are available.
Drug Utilization Patterns for Oxycodone ER and Other ER/LA Opioid Analgesics 2011-2015

Outline

- Sales Distribution
- Prescription Utilization
- Prescriber Specialty
- Limitations
- Summary
Extended Release (ER)/Long Acting (LA) Opioid Analgesics

- **Oral-dosage Forms:**
  - Oxycodone
  - Methadone
  - Morphine
  - Hydromorphone
  - Oxymorphone
  - Tapentadol
  - Hydrocodone

- **Transdermal Delivery (TD) Systems:**
  - Fentanyl
  - Buprenorphine
Sales Distribution Data

- IMS National Sales Perspectives Database™
- Captures sales of drug products from manufacturers to all retail and non-retail settings
  - Retail chain pharmacies, mail-order pharmacies, hospitals, etc.
- Data are nationally projected
- Does not represent actual patient use
Sales Distribution Data
Year 2015
IMS Health, IMS National Sales Perspective™, Extracted March 2016

Oxycodone ER

- Retail: 75%
- Non-Retail: 23%
- Mail Order: 2%
Database Descriptions

Prescription Utilization and Prescriber Specialty Data:

- IMS Health, National Prescription Audit™ (NPA) Database
- Measures dispensing of prescriptions out of retail pharmacies into the hands of consumers
- Data can be stratified by prescriber specialty
Prescription Drug Utilization:
Nationally estimated number of prescriptions dispensed for ER/LA opioid analgesics from U.S. outpatient retail pharmacies, 2011-2015

Top Prescriber Specialty: 2015

Top 10 prescriber specialties by the nationally estimated number of prescriptions dispensed for oxycodone ER from U.S. outpatient retail pharmacies

Limitations:

- Only outpatient retail pharmacy use was assessed
- Top specialties captured as reported by the prescription data
Summary:

- Decreased utilization of oxycodone ER from 2011-2015
- Third most frequently dispensed ER/LA opioid with 4.4 million prescriptions
- One-quarter of oxycodone ER prescriptions written by family practice/general practice/osteopathy
