

M-PROVE[®]

Maximizing Patient Reported Outcomes and Vigilance Efforts

Utilizing the modern patient to increase participation and signal detection in pharmacovigilance

Justin Penzenstadler
Peter Nguyen
David Tran
Yoon Hong
Jillian Aquino

Current Challenges

Only 1 in 10 adverse events are captured by FDA's surveillance system.

- Public awareness
- Passive
- Time and effort

MEDWATCH
THE FDA MEDICAL PROBLEMS REPORTING PROGRAM

For VOLUNTARY reporting
by health professionals of adverse
events and product problems

A. Patient information

B. Adverse event or product problem

C. Suspect medication(s)

D. Suspect medical device

E. Reporter (see confidentiality section on back)

PLEASE TYPE OR USE BLACK INK

FDA
Mail to: MEDWATCH or FAX to:
5050 Fishers Lane 1-800-FDA-1088
Rockville, MD 20852-9787

Submission of a report does not constitute an admission that medical personnel or the product caused or contributed to the event.

Engaging the 21st Century Patient

Goals of **M-PROVE**[®] :

- To help 21st century patients become proactive leaders of their own health and safety, and to provide drug safety information in a learner-friendly manner.
- To encourage public's active participation in FDA's pharmacovigilance efforts by **making reporting tools readily accessible and easier to use**

Participation is inversely proportional to effort

MedWatch: lengthy, intimidating

M-PROVE[®]: simpler, leaner, **SMARTER**

SO WHAT?

- Surveillance is critical to **protect public safety and wellbeing**
- Addresses one of ORSI's objectives: "Harness Diverse Data through Information Sciences to Improve Health Outcomes"

Value Added by **M-PROVE**[®]

- Readily accessible to both consumers and healthcare professionals
- Relatively quick and easy for reporters
- Increased MedWatch participation
 - Faster detection of adverse events
 - Identification of rarer events
 - Better detection of vulnerable subgroups

Feasibility

- Simple addition to an already well implemented google “side bar”
- Data inputs would just need to be automatically inputted into a MedWatch form

Limitations?

- Richness/Comprehensiveness of data collected
- Quality of data
- Requires FDA/Search engine collaboration and agreement

Google searches could help FDA find drug adverse events

July 17, 2015

FDA is talking to Google about how the search engine could help the agency identify previously unknown adverse events of medications. Agency officials held a conference call on June 9 with Evgeniy Gabrilovich, a senior Google researcher who cowrote a 2013 paper about using search query data to identify adverse drug reactions.

FDA is talking to Google about how the search engine could help the agency identify previously unknown adverse events of medications. Agency officials held a conference call on June 9 with Evgeniy Gabrilovich, a senior Google researcher who cowrote a 2013 paper about using search query data to identify adverse drug reactions. Microsoft researchers also say they have been working informally with the agency for several years on detecting drug adverse events. FDA spokesman Chris Kelly called the meeting an introduction and a chance "for the agency to begin a discussion on how we might collaborate with Google on identifying adverse event data, using Google's technologies and data." The government's process for tracking adverse events—which involves patients, physicians, and pharmaceutical companies submitting forms that describe possible reactions—has not changed much since the late 1990s. FDA now gets more than a million reports of adverse drug reactions each year. Although the agency has tried to make the data easier to access, critics say the system probably misses many adverse events and can be slow to detect safety problems.
