Commissioner Mark B. McClellan, M.D., Ph.D.,
Food and Drug Administration
5600 Fishers Lane, Parklawn Bldg., Room 14-71
Rockville, MD. 20857

Dear Commissioner Mark McClellan,

Enclosed is a petition of over 300 people who urge you to protect our country from the evils of Emergency Contraceptives being approved for sale over-the-counter (FDA Docket #2001P-0075).

Pro-abortionists and drug company profiteers are heavily pressuring the FDA to overlook serious health risks of this highly dangerous drug! Instead of protecting the drug company's ability to make money, as has been done in the past with RU 486, the FDA should protect women, teens and girls by opposing over-the-counter sales of Emergency Contraceptives. Plan B's manufacturer says it should not be used routinely which is exactly why it should not be sold over-the-counter.

E.C. can act as a contraceptive or an abortifacient. This will lead to a greater assault on human life.

Sales of Emergency Contraceptives over-the-counter will remove all safeguards for our youth, exposing them to serious health risks including ectopic pregnancies, blood clots and heart attacks. It will remove a parent's ability to help at a critical time in their daughter's life, making her more vulnerable to sexual abuse. Scientific evidence indicates more rapes, abortions and sexually transmitted diseases will increase if the FDA approves over-the-counter sales of the "morning after pill." In Washington, State, and in Sweden, where Morning after pills have been made widely available, rates of STD infection have skyrocketed since they were introduced.

We urge you to reject the application of Docket #2001P-0075 which asks to "Switch the status of emergency contraceptives from prescription to over-the-counter."

God Bless you and America.

Sincerely,

Annette Mellady
Lake County Right to Life

C1600

01P 0075

WE URGE THE FDA TO REJECT THE APPLICATION OF DOCKET #2001P-0075 WHICH ASKS TO "SWITCH THE STATUS OF EMERGENCY CONTRACEPTIVES FROM PRESCRIPTION TO OVER-THE-COUNTER.

Emergency Contraceptives (Plan B), also known as the morning after pill (MAP) act as a contraceptive or an abortifacient. Selling E.C. over-the counter would remove all safeguards for our youth. Pregnant minors who are victims of sexual abuse need interaction with medical professionals who are required to report sexual abuse.

The FDA should not consider allowing Plan B or any other form of the morning-after pill to be sold over-the-counter since this would provide access to a high dose of this drug without medical supervision. A lower-dose cannot be obtained without a medical exam, physician oversight and prescription. Emergency Contraceptives expose women, teen-agers and girls to serious medical risks such as blood clots and heart attacks. Plan B's manufacturer says it should not be used routinely which is why it should not be available over-the-counter.

WE URGE THE FDA TO REJECT THE APPLICATION OF DOCKET #2001P-0075 WHICH ASKS TO "SWITCH THE STATUS OF EMERGENCY CONTRACEPTIVES FROM PRESCRIPTION TO OVER-THE-COUNTER.

Emergency Contraceptives (Plan B), also known as the morning after pill (MAP) act as a contraceptive or an abortifacient. Selling E.C. over-the-counter would remove all safeguards for our youth. Pregnant minors who are victims of sexual abuse need interaction with medical professionals who are required to report sexual abuse.

The FDA should not consider allowing Plan B or any other form of the morning-after pill to be sold over-the-counter since this would provide access to a high dose of this drug without medical supervision. A lower-dose cannot be obtained without a medical exam, physician oversight and prescription. Emergency Contraceptives expose women, teen-agers and girls to serious medical risks such as blood clots and heart attacks. Plan B's manufacturer says it should not be used routinely which is why it should not be available over-the-counter.

A lower-dose cannot be obtained without a medical exam, physician oversight and prescription. Emergency Contraceptives expose women, teen-agers and girls to serious medical risks such as blood clots and heart attacks. Plan B's manufacturer says it should not be used routinely which is why it should not be available over-the-counter.
