

8. Overall Conclusions

8. OVERALL CONCLUSIONS

- FluMist is safe, well-tolerated, and efficacious in prevention of influenza and is effective in reducing the associated illness, work loss and medical care attributable to influenza.
- The high level of protective efficacy coupled with the limited rate of adverse events offer a net benefit for administration of FluMist to healthy children and healthy adults.
- FluMist provides an alternative route of administration for influenza vaccination and is anticipated to lead to an increased use of vaccine in healthy children and healthy adults.
