      2.1.4 Assessment of the condition of the baby ................................. 8
  2.2 Published Studies (new since the original PMA) .............................. 10
  2.3 New articles (as yet unpublished) ............................................... 11

1 PURPOSE

This report provides a list of publications that were important in the development of, or are directly relevant to the STAN® Fetal Heart Monitor.

The report is split into two parts – those publications that occurred before the original PMA submitted by Neoventa (December 2001) and those published after that date. Additionally, references are included to new articles that have not yet been published.
2 BIBLIOGRAPHY

2.1 Published Studies (at the time of the original PMA)

2.1.1 Physiological reactions to hypoxia

2.1.2 The CTG

2.1.3 The ST waveform of the fetal electrocardiogram

[71] Rosén KG, Green KR. Fetal ECG research news. 1991 July, 2(3).

2.1.4 Assessment of the condition of the baby

2.2 Published Studies (new since the original PMA)

2.3 New articles (as yet unpublished)
