Rockville, MD 208522
U.S.A.

Comment:

"Draft Guidance for Industry :Fumonisin Levels in Human Foods and Animal Feeds."

Corn is well-known for being contaminated with Fumonisin. Purple corn, a kind of corn, is contaminated with it in many cases as well.

As a color additive, Vegetable Juice Color is listed in 21CFR 73.260, "Vegetable Juice Color is prepared either by expressing the juice mature varieties of fresh, edible vegetable, or by the water infusion of the dried vegetable.

Fumonisin contaminated Purple corn could be used for production of vegetable juices as material. Actually Fumonisin B1 : 0.8~46ppm was detected in purple corn color that we obtained from Japan and South America.

Therefore, we would suggest that a level of Fumonisin B1 should be established on color extracted from purple corn, and should be regulated like "not more than 1.0 ppm."
