Dear Dr. Henney,

I'm expressing my concern over the FDA's regulation of G.E. food, asking that the agency's current policies be changed, + to support all the points in docket # 00P-1211/CP1:

ALL G.E. foods should be labeled so I am informed + have a choice.

G.E. foods should not be assumed to be "generally recognized as safe" + should have mandatory pre-market safety testing.

There should be a moratorium on G.E. foods until long-term studies show they are safe for human health + the environment.

As a person with food allergies, especially to nuts, I am greatly worried about the possibility of reacting to a G.E. product that's not labeled. I read labels on EVERYTHING I eat.

Thank You
Elizabeth Thomas
