Dear Ms Henney,

I am writing to urge you to do whatever is in your power to prevent the use of antibiotics in poultry feed. Feeding this antibiotic to poultry to speed growth is not necessary and may be allowing bacteria strains to become resistant to one of the few antibiotics (Synercid) used for human infections which do not respond to other antibiotics. The European Union has banned antibiotics used by humans from animal feed and this has also been supported by the Centers for Disease Control and the World Health Organization. Please consider supporting this as well.

Sincerely,

*Linde Westling*
