To Whom it May Concern,

My name is Mary Dreher and I'm a senior at Northome High School in Northome, Minnesota. As a senior project, I must effect a positive change. The issue I've decided to research and change is the conditions regarding factory farms.

According to the research I have done, factory farms are very unsanitary. Also, slaughter livestock apparently are given growth enhancing hormones and antibiotics. My question to you is, what rules and regulations has the FDA put into place to guarentee that all slaughter meat is safe for human consumption? What exactly are the hormones and antibiotics given to slaughter animals and what are the effects? Also, are there any rules and regulations preventing slaughter livestock from being given growth enhancing hormones and antibiotics? I will appreciate your response.

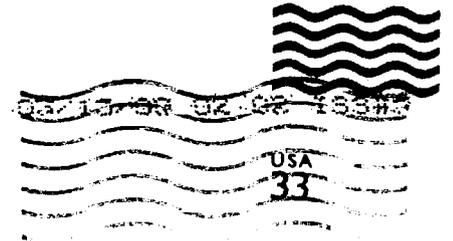

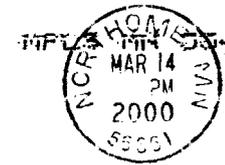

Thank You,

Mary Dreher.
