Dear Susan,

I'm enclosing an article that you may have in your file. Dr. Irena King, the chemist in this group, told me that no one from the FDA or Shortening Institute had contacted them on the article. I believe the data in Table 2 in regard to the significant difference in DHA and EPA in the Control and Cardiac Arrest cases to be important. These are the fatty acids important to eye and brain function. My article on trans-fat is now under a second review. I hope it will now satisfy the three reviewers and editors.

Please feel free to contact me anytime with any new developments.

Sincerely,

Dr. Fred A. Kummerow  
Burnsides Research Laboratory
