Hi Judy,

Here's a recent account of the Camelford drinking water disaster, where 20 tons of aluminum sulfate were dumped into the supply. Of particular interest is the Carole Cross story. It appears that she absorbed the aluminum through the skin from a bath - which reaffirms the conclusions of Dr. William Forbes about absorption surfaces from drinking water. The Cross's didn't drink the water. Joan King did drink the water, and also has Alzheimer's like effects. Either way, aluminum is not safe.

Best regards, Erik
