Neptune Krill Oil™

Neptune Krill Oil™ is a natural extract from Antarctic krill (*euphausia superba*) characterized by its high content of polyunsaturated fatty acids such as Omega-3,6,9, potent antioxidants such as astaxanthin, canthaxanthin, flavonoids (novel molecule), vitamin A, vitamin E and phospholipids such as phosphatidylcholine, phosphatidylethanolamine, phosphatidylserine, cardiolipin, phosphatidylinositol and sphingomyelin, while demonstrating a remarkable and naturally acquired stability without the addition of any preservatives.

Neptune Aquateine™

Neptune Aquateine™ is the dry fraction (or residue) remaining after the extraction of Neptune Krill Oil. This residue's main characteristic features are its high protein content, 19 common amino acids, active and stable enzymatic activity, traces of residual pigments, traces of polypeptides (more or less short chains of amino acids resulting from the protein's self-digestion), traces of chitin, traces of a growth agent.

Neptune Lyo-Krill™

Neptune Lyo-Krill™ is freeze-dried Krill produced with a novel freeze-drying process which helps maintain a significantly high percentage of proteins, enzymes, and essential fatty acids such as EPA and DHA. Consequently, the qualities of intact biologically active polypeptides, enzymes and essential fatty acids are kept or even increased, and are readily bio-available for the benefit of human health.
