| Farwell, TX 79325-3586 | Shell Egg Producer |

This document lists observations made by the FDA representative(s) during the inspection of your facility. They are inspectional observations, and do not represent a final Agency determination regarding your compliance. If you have an objection regarding an observation, or have implemented, or plan to implement, corrective action in response to an observation, you may discuss the objection or action with the FDA representative(s) during the inspection or submit this information to FDA at the address above. If you have any questions, please contact FDA at the phone number and address above.

DURING AN INSPECTION OF YOUR FIRM WE OBSERVED:

OBSERVATION 1

You have not taken adequate steps to assure that there is no introduction or transfer of SE into or among poultry houses.

Specifically, your employees move mortality layers from the ten Poultry Houses #LC-1 through LC-10 to the one mortality building using wheelbarrows. The employees move the wheelbarrows to and from the individual poultry houses and the one mortality building through the exterior doors on each poultry house, across a dirt road which runs adjacent to the poultry houses, down an ~5' embankment, across 1 of 2 metal grates (~10' long x 2' wide with 3/4" holes lying in the wet sand and water) in a drainage ditch, up an ~5' embankment, across an ~100' dirt parking lot to the mortality building. The poultry houses are located ~3-500' from the mortality building.

1. On the far sides of both of these two drainage ditch crossing points are ^{(b) (4)} elevated manure conveyors which transport dry manure from the poultry houses into the manure building. Manure was observed on the ground and in the water which had dropped from the above conveyors into the drainage ditch. The firm does not have an SOP for cleaning up the manure which drops from the manure conveyors into the drainage ditch.
2. Birds were observed on the ground underneath the manure conveyors in the drainage ditch. Bird tracks were observed in the wet sand next to the two metal grates which cross the drainage ditch. We observed on two occasions the front rubber tire of one wheelbarrow make contact with the dirt, the metal grate, the wet sand and the water.
3. Feathers, dry manure, wet manure and/or filth were observed in empty wheelbarrows being stored outside on a concrete patio next to the exterior doors of the ten poultry houses. Feathers, dry manure and/or filth were observed in empty wheelbarrows being stored inside the ten poultry houses.

The wheelbarrows are a potential source of SE introduction into the ten poultry houses. Your firm does not have an SOP for the cleaning and sanitizing of wheelbarrows in your SE Plan.
