Adjourn 48

1 PROCEEDINGS

2 Welcome and Overview of ICCR Process

3 DR. KATZ: We'll go ahead and get started.

4 I hope you can all hear me. I'm Linda Katz. I'm the
5 Director for the Office of Cosmetics and Colors, and I
6 am also the lead from the FDA's delegation for ICCR. I
7 am going to go through some logistic details, before I
8 start to go through my presentation, just so everybody
9 is clear on how this afternoon will move forward.

10 I will give a general overview, and
11 following that, we have had requests from
12 five speakers who are sitting at the table.
13 They will each have 10 minutes to present the
14 information that you have received in your packet.
15 Following the end of the presentation, I will
16 go ahead and close the meeting.
17 The meeting is not set up as a dialogue.
18 It's really just an opportunity to present
19 information. If you have any information or
20 questions afterwards, you're welcome to present
21 that to us as well.

22 Following the meeting itself, since we do have a

1 transcriptionist here, we will make a transcript
2 available, which will be found in the docket.
3 Probably it will take us, I would guess,
4 a couple of months before it's up, but it
5 will be available for everyone to look at
6 within the docket.

7 As far as minor logistical issues, if people
8 have cell phones, please turn them off or turn them to
9 silence. It's a small room, and if they start
10 ringing, it would be very distracting. If anyone
11 needs to use the rest room, there are rest rooms
12 down the hall to the right, and someone will
13 escort you since you cannot walk through the
14 building on your own. At the end of the meeting
15 as well, we will escort you back downstairs.
16 Those of you who have badges need to turn them in
17 so that it's clear that you have departed
18 the building.

19 And with that, I will go ahead and
20 begin my presentation at this point in time, unless
21 there is anything that I have forgotten.

22 (No audible response.)

1 DR. KATZ: Okay. So let me go ahead. I am
2 going to sit down because I don't know if I am going to
3 be in people's view standing up, and the room itself is
4 small enough that you should at least hopefully be able
5 to hear me if I am seated.

6 What I am going to do today is really just to
7 talk about ICCR, which is the International Cooperation
8 on Cosmetics Regulation. I'm going to go through and
9 give a brief description of ICCR and its process.
10 I'll do a summary of what happened last year, ICCR-6,
11 and then give you a brief overview of what we
12 anticipate as the upcoming issues for ICCR-7.

13 This really represents the beginning of
14 FDA's international harmonization efforts. As you
15 can see from this slide, they started back on October
16 11th of 1995. The goals at that time were fairly
17 broad and overreaching, and they included the issues to
18 try to promote trade, to promote a mutual
19 understanding, and to try to harmonize in areas in
20 which FDA could harmonize with other governments
21 themselves.

22 Basically it was to facilitate the exchange

1 of scientific information, to have some transparency,
2 and to accept certain standards that could be
3 equivalent across the globe, and basically the bottom
4 line was to avoid a lowering of harmonization, or as we
5 called it, downward harmonization.

6 Now, when the harmonization effort was
7 originally established by FDA, it really was
8 established for drugs primarily. The other products
9 that FDA regulated eventually came on board through the
10 years, but it wasn't really until the late 1990s that
11 there was a harmonization effort for cosmetics.
12 That effort really started -- let me go back one more
13 time -- with what we called CHIC.
14 For any of you who are sort of old-timers, you will
15 probably remember CHIC, which was Cosmetic
16 Harmonization International Cooperation. This was
17 started as a quadrilateral organization, or
18 quadrilateral group, very similar to ICCR, but really it
19 was just an exchange of information. There was no real
20 goal or anticipation that as a result of these meetings
21 anything more than information would be exchanged.

22 As a result, in 2006, which was the last CHIC

1 meeting, the regulators got together and said CHIC
2 isn't really working. You know, it's nice to get
3 together and share information, but we need to do
4 something a little bit more proactive in the
5 international sphere. We decided that we needed
6 to reestablish ourselves and thought it was
7 better to reestablish ourself with a new name
8 rather than use the old name so that it was clear
9 that our goal and our mission was somewhat different.

10 The members were the same and
11 they included Canada, the EU, Japan, and
12 the U.S., the Food and Drug Administration (FDA).
13 Our mission was to form a voluntary consensus model
14 where we would try to work on items of mutual interest.
15 Now, notice I don't use the word "harmonization"
16 because we all agreed in our first meeting that
17 we could not harmonize because all four countries
18 regulated, or all four jurisdictions regulated,
19 their products very differently, including
20 what they would consider cosmetics and over-the-counter
21 drugs. As an example, many products in the
22 United States which are regulated as over-the-counter

1 drugs, such as sunscreens and anti-dandruff shampoo,
2 are regulated elsewhere in the world as cosmetics.
3 So as a result of that, we agreed that we could not
4 really harmonize but we would try to work on items of
5 mutual interest and to try to partner with our trade
6 organization to see which topics might be of
7 mutual interest throughout all of our jurisdictions.
8 Again the reason why we didn't harmonize is
9 because we all agreed that we could not
10 change any one country's regulations.

11 This slide is really just a quick overview of
12 where we've been in the last 7 years or 8 years.
13 Basically the way that it's set up is that ICCR rotates
14 on a yearly basis. The country who has the meeting
15 plays the role of the executive secretariat for the
16 year prior to the meeting. They will establish
17 the agenda, they will establish all of the
18 teleconferences that happen during the meeting; and they are
19 responsible for the agenda and the final meeting and
20 posting outcomes.

21 As you can see, we were responsible for
22 ICCR-6, and Japan is responsible for ICCR-7, and we have

1 been rotating, as I said, on a yearly basis.

2 The way the work process goes is
3 that we have an annual meeting and usually
4 quarterly telecons. More frequent telecons are held
5 if needed, but at least Quarterly. As I mentioned,
6 we rotate among the four regions. From the
7 U.S. perspective, we advertise the Public Meeting
8 in the Federal Register: as a Public Meeting Notice
9 and we announce when the meetings are going to happen.
10 We've been holding open meetings prior to each
11 ICCR meeting. They are usually held somewhere
12 between a month and a half to two months
13 before the meeting, again to get any input
14 that any of our constituents might want to offer to us,
15 or the hosting region who chairs the meeting, and the
16 ICCR may charter working groups. You'll hear a
17 little bit more about them as I go through.

18 The first day of the meeting is the
19 Regulators Only Meeting. During that time we get
20 together and talk about issues that we feel really are
21 pertinent for regulators only and may have regulatory
22 implications. The second day we meet with industry, so

1 it's an Industry-Regulator Meeting. And the third day is a
2 Regulators Only Meeting again, where we will come back,
3 go over what we've done, prepare a press statement, and
4 make sure that we've adopted any outcomes that need to
5 be put on our website so that everyone can see what
6 we've done for the meeting and what our outcomes
7 were for the year.

8 About 2 years ago, we started with a
9 stakeholder, or open session that was held on the
10 afternoon of the second day. The first time this
11 was done was in the EU. We did it again last year,
12 where we invited anybody to present any input that they
13 would like. We did have speakers who presented some
14 information to us which we have looked at, and, in
15 fact, you'll see that some of it has impacted on our
16 agenda for this upcoming year. In addition to
17 that open session last year, we decided
18 that we would have a session where we would invite
19 regulators from and industry from other countries who
20 had expressed an interest in seeing how our meetings
21 were actually held and what we do. I'll talk a
22 little bit more about that as I go into the outcomes of

1 ICCR-6.

2 This slide shows the agenda items and
3 their broad categories: Alternatives to Animal
4 Testing, Nanotechnology, Trace Impurities, In Silico
5 Prediction Models, Endocrine Disruptors, and Allergens.

6 With regard to alternative test methods, we
7 agreed that we would post the white paper, which is the
8 last bullet point, the ICCR white paper "Applicability
9 of Animal Testing and Regulation Frameworks within ICCR
10 Regions," and that is available on our website. We
11 also agreed that we would get regular updates from
12 ICATM. ICATM is the International Cooperation on
13 Alternative Test Methods. This is a group that
14 actually formed out of ICCR which is now housed
15 under the umbrella of the VAMs, ECVAM and
16 ICCVAM in particular. This was designed in a way to
17 help us so that we would understand which tests have
18 been validated as alternative test methods and to give
19 us more information on a regular basis.
20 We all agreed that we would get updates regularly
21 on a semi-annual basis. Our updated table
22 is attached to the reports and would be updated on

1 a yearly basis so that we would all know what tests
2 have been validated, which tests are being worked on,
3 and what tests need to go further.

4 For nanotechnology, we've actually had four
5 working groups that have been formed. We just
6 recently posted the document on "Characterization of
7 Nanomaterials: Insolubility, Biopersistence,
8 and Size Measurements in Complex Media," and that's
9 been on our website just since last month.

10 There is another document that will probably
11 be posted following the ICCR-7 meeting, which is the
12 "Safety Approaches to Nanomaterials in Cosmetics."
13 The only reason it hasn't posted yet is that it is
14 still being reassessed and edited, but it hopefully
15 will be posted soon.

16 We have formed workgroups as
17 needed to deal with the issues of characterization and
18 safety of materials as they arise. When the groups
19 have answered their particular questions, they disband
20 and another group is formed, as needed.

21 One of the other areas we've been working on
22 for the last several years has been trace impurities,

1 and there are two documents which are being vetted now
2 prior to being posted. One is on lead and
3 one is 1,4-Dioxane, and we are hoping that those two
4 will be available sometime later this year.

5 With regard to endocrine disruptors, this is
6 a new topic for us, and this was actually brought
7 as a request from one of our stakeholders. In
8 ICCR-5 and again in ICCR-6, we were asked to look
9 at some of the endocrine issues and to try to deal with
10 endocrine disruption as a result of certain chemicals that
11 might be found in cosmetics. A workgroup is being considered
12 to deal with this further, but we will be
13 having more discussion again at ICCR-7.

14 In addition, we formed a new working group
15 for in silico prediction models. This is in a sense
16 another way to look at alternative tests for animal
17 testing. This working group has been established and
18 has been working for at least the last 4 or 5 months.
19 We're expecting an update from them at ICCR-7 to
20 see how we need to go forward.

21 Another working group was recently
22 established on allergens. This again is to look at

1 ingredients that are found in cosmetics. Since every
2 country of the four that's here assesses allergens and
3 it has warnings separately, it's a way for us to
4 communicate to see what data went into acceptance of
5 different warnings and how to pick the different
6 ingredients to evaluate.

7 So this slide just summarizes what
8 I've already said. This is a thorough process.
9 We're looking for more transparency.
10 Not only has this meeting gotten larger, but we also
11 have had the session on the 1-1/2 day to talk with our
12 stakeholders to give us more information. There will
13 be a stakeholder session in Tokyo on Day Two that is
14 planned.

15 In addition to that, we also last year, as I
16 mentioned, invited representatives. Here are the
17 countries where we had representatives last year, which
18 were from Australia, Brazil, People's Republic of China,
19 the Republic of South Korea, and Saudi Arabia. For
20 this coming year, China and Brazil will be coming back
21 to once again observe. And this year, as opposed
22 to last year, we asked all of the observers to come and

1 explain how they regulate cosmetics. This year we're
2 actually giving specific assignments for those
3 countries who are coming back to help to give us
4 additional information in the areas of our interests
5 for the ICCR-7 meeting.

6 As I mentioned, Japan will hold this meeting.
7 It's scheduled from July 8th through July 10th, and
8 it should be 2013, I don't know what happened
9 to the "3" at the end of the first bullet, but
10 nonetheless, not 201 but 2013. Japan has taken
11 care of the quarterly teleconferences. So far, the
12 tentative agenda includes Alternatives to Animal
13 Testing with its updates, the Nanotechnology, with its
14 updates, updates about Trace Impurities, and further
15 assignments in impurities to look at, and In Silico Models.
16 There will be reports from the workgroups, the
17 first report, and New Proposed Agenda Items, which
18 would also include allergens and the endocrine
19 disruptors and any other items, from our last
20 teleconference, which is to be held in June, that need
21 input from you or input that others have had
22 from their stakeholders.

1 Public Comments

2 DR. KATZ: So with that, I would like to
3 thank everyone for their attention. And then we will
4 begin with going through with our presentations.

5 And our first presentation will be from
6 Aryenish Birdie, from the Physicians Committee for
7 Responsible Medicine.

8 MS. BIRDIE: Okay. Well, thank you so much
9 for coming. My name is Aryenish Birdie, and I am
10 speaking on animal testing and situating this issue in
11 the global context. Today I am also representing
12 People for the Ethical Treatment of Animals, and
13 combined we have a membership of more than 3 million
14 people worldwide and over 10,000 physician members.

15 So firstly I wanted to state that we support
16 the invitation of Brazil and China as observers. We
17 think that this is in the best interest of the citizens
18 in their respective countries, and we think that this
19 is a really great step forward.

20 So I wanted to start and say that 2013, even
21 though we are not even halfway through, has been a
22 game-changing year. As most people here know, the EU

1 has implemented a marketing ban on animal-tested
2 cosmetics. As of January 1st, Israel has also
3 implemented an import and testing ban for cosmetic
4 products as well as household products. And India and
5 Vietnam are taking strides amongst some other countries
6 in moving in this direction. And I think it should be
7 noted that this movement is largely coming because the
8 global consumer is demanding it.

9 In the United States, there have been two
10 independent polls that have showed public support for a
11 ban on animal tests. One poll conducted in 2011 found
12 that 72 percent of Americans oppose animal testing for
13 cosmetic products, and in that same poll, 78 percent of
14 Americans said that they support the development of
15 alternatives to animal testing and think it's
16 important.

17 Another poll this last year came out that
18 reinforced these values, and that poll also showed that
19 there is global consumer confidence growing in non-
20 animal-tested cosmetics.

21 So because of all of this momentum in the
22 United States and internationally, we have a few

1 recommendations for FDA to take.

2 So firstly, we realize that testing method
3 harmonization isn't the goal here, but we believe that
4 it is important for agencies within ICCR to harmonize
5 their policy approaches on animal testing to take into
6 account similar global desires of consumers around the
7 world.

8 And so with this, here are some concrete
9 positions.

10 One is to not accept any new data from animal
11 tests. We believe this is the best way to maintain
12 consumer protection and to minimize trade barriers.

13 And I think it should be noted that consumers
14 have made it clear that ethics is important to them.
15 They don't want animals dying for their cosmetics, and
16 this should be a driving principle.

17 We also think that there are some successes
18 to be learned and shared through this process and that
19 are currently in the movement, and so implementing
20 alternative methods into regulatory programs and
21 training scientists, students, and regulators is just
22 an idea of how we can continue to propel this movement

1 forward.

2 So I wanted to just briefly highlight a case
3 study. Many of you may know that the COSMOS Project is
4 a 5-year project largely funded by Cosmetics Europe and
5 the European Commission, and it's looking to find non-
6 animal solutions to the repeated dose toxicity test,
7 and the main aim of COSMOS is to develop freely
8 available tools and workflows to predict the safety to
9 humans following the use of cosmetic ingredients, and
10 it's a public- private partnership with the FDA
11 providing a lot of data for the computational models to
12 be built. And so between academia and industry and
13 regulatory agencies, we just think this is a really
14 great example, we really support this, and we are
15 hoping to see similar collaborations with ICCR
16 countries in this realm. We think that FDA can really
17 take the lead in showing how non-animal development
18 should be moving forward.

19 And then on a very different note, we were
20 talking about preparing my slides for this, and we were
21 thinking that in order to be the most effective and to
22 make sure that a lot of these comments don't go into a

1 comments displayed?

2 MR. GEFFKEN: That's fine. They don't have
3 to be, but I thought that was protocol.

4 MS. COOK: Okay. Thank you.

5 MR. GEFFKEN: So thank you. Just for the
6 record. And as far as breaks and so forth, we'll do
7 the best we can.

8 DR. KATZ: Everyone has a copy.

9 MR. GEFFKEN: I think that's probably the
10 easiest way anyway. Thank you very much.

11 My name is Carl Geffken, and I represent the
12 Independent Cosmetic Manufacturers and Distributors.
13 ICMAD, is a nonprofit organization, industry trade
14 association, representing over 700 mostly small to
15 medium size companies that manufacture or distribute
16 cosmetic products, their components, materials, and
17 services in the United States and worldwide markets.
18 Recently we located to Deer Park, Illinois. ICMAD was
19 founded in 1974 in Washington, D.C., to represent
20 entrepreneurial cosmetic businesses, and while
21 retaining that distinction, it has become a focused
22 resource of programs that actively support both new

1 startup as well as established companies.

2 About 90 percent of our member companies are
3 small but highly competitive businesses that compete
4 globally for a share in our very creative cosmetic and
5 skin care markets.

6 About half of our member companies have sales
7 below \$500,000 annually, while about 10 percent of our
8 members have sales above \$10 million per year. Six
9 percent of our members are international and represent
10 18 different countries, although Canada is the most
11 prevalent.

12 Our members are committed to the cosmetic
13 consumer safety and in fact all have signed an ICMAD
14 Code of Ethics when they joined. Participating companies
15 are increasingly global in their market strategies, and
16 because of their smaller size and competitive
17 challenges, they have become uniquely aware of U.S.
18 regulations and their differences in regulatory
19 jurisdictions worldwide. ICMAD has an active EU
20 assistance program to specifically help comply with the
21 unique requirements of the European Cosmetic Regulation
22 and its associated markets.

1 The Association also sponsored both an annual
2 FDA Workshop and a Cosmetic Technical-Regulatory Forum
3 amongst its other opportunities to provide ongoing
4 regulatory assistance and to address the many technical
5 and safety obligations for our segment of the industry.
6 I assure you that the Association takes all compliance
7 responsibilities with utmost concern.

8 Seven years ago, the FDA invited ICMAD to
9 participate in the ICCR process to represent small
10 business interests within the cosmetics industry
11 sector. We continue to support all objectives and
12 outcomes that foster a reduction in trade barriers and
13 a leveling of the playing field to allow both business
14 growth and improve service to consumers. As new and
15 more challenging questions and concerns arise, demands
16 for consumer safety substantiation increase in
17 relevance as does the need for reconciliation of
18 regulatory interpretations between different
19 international jurisdictions.

20 From a historical perspective, in 2008, ICMAD
21 sponsored a comprehensive consumer survey of over 2,300
22 individuals to better understand cosmetic ingredient

1 labeling interpretations, and we provided data to
2 support broad, 80 percent, U.S. recognition of "aqua"
3 as a potential equivalent to the INCI term "water."
4 Our industry continues to experience the technical and
5 economic burden of unique labeling differences when
6 attempting to harmonize production for international
7 sales, especially in the Canadian market. While the
8 outcome of this issue has not yet been favorable for
9 us, we continue to support any and all measures to
10 align ingredient designations and other labeling
11 differences among major regulatory jurisdictions.

12 With this in mind, ICMAD has been
13 particularly interested in those topics which foster
14 progress for improved approaches to product safety
15 evaluation, a unified position on potential allergen
16 labeling, a better understanding of endocrine
17 disruption, and the methodology to discriminate between
18 significant and inappropriate testing.

19 The current interest in nanomaterial
20 characterization and the resolution of potential
21 product safety concerns continues to captivate the
22 public, so we hope that joint efforts already underway

1 will achieve a more fruitful consensus through joint
2 collaboration between the four regulatory
3 jurisdictions.

4 Finally, ICMAD supports the benefits to be
5 gained from common characterization of safety for
6 cosmetic ingredients and authorized substances. This
7 is of particular importance for trace materials,
8 especially those that have been well studied and where
9 safe harbor limits can be established to build consumer
10 confidence on a purely scientific basis. Significant
11 progress has been made in the past 2 years, and we are
12 hopeful that outcomes can be published soon and even
13 further progress achieved on additional materials
14 during ICCR-7.

15 The ICCR process has achieved some clear
16 success in its support and recognition of the ISO 22716
17 Standard for Cosmetic Good Manufacturing Practice.
18 This success alone has demonstrated the benefit of
19 collaborative discussions where experience is shared
20 between industry and the regulators to meet and resolve
21 a longstanding void. Compliance with GMP is a basic
22 foundation for manufacturing and helps to assure

1 product safety and trust for our consumers worldwide.
2 We hope that all four regulatory jurisdictions will
3 soon be in a position to jointly publish recognition of
4 this minimum expectation for basic GMP compliance.

5 In conclusion, ICMAD is committed to
6 continued participation and support of the ICCR
7 process, and we look forward to the upcoming ICCR-7
8 Industry Caucus during the joint meeting of regulators
9 in Japan. ICMAD is also on record in its support for
10 an open process, timely publication of official ICCR
11 outcomes, and a wider international outreach to include
12 new jurisdictions where market significance and broader
13 engagement would be beneficial on that global basis.

14 Thank you for the opportunity to provide
15 comments today during this FDA public hearing, and
16 thank you for your attention.

17 DR. KATZ: Thank you, Carl.

18 Our next speaker is Francine Lamoriello, from
19 the Personal Care Products Council.

20 MS. LAMORIELLO: Thank you, Linda.

21 Good afternoon, everyone. My name is
22 Francine Lamoriello, and I am Executive Vice President

1 of Global Strategies for the Personal Care Products
2 Council. Thank you for the invitation to join you this
3 afternoon.

4 On behalf of our industry, I am pleased to
5 once again take this opportunity to emphasize our
6 industry's support for the ICCR process. We would like
7 to express appreciation to FDA and the other
8 participating regulators from Europe, Japan, and Canada
9 for their participation and support of the ICCR
10 process. We believe the ICCR has been a beneficial
11 forum for the exchange of information and regulatory
12 alignment between important markets for cosmetics and
13 personal care products.

14 The Personal Care Products Council is the
15 leading national trade association representing the
16 global cosmetic and personal care products industry.
17 Founded in 1894, our more than 600 member companies
18 manufacture, distribute, and supply the vast majority
19 of finished personal care products marketed in the
20 United States.

21 Our members represent some of the most well-
22 known and trusted brands and product categories in the

1 world. We also represent many medium and smaller sized
2 companies as part of our membership. In fact, two-
3 thirds of Council member companies have annual sales of
4 under \$5 million.

5 For more than 100 years, regulators and
6 policymakers have relied on our organization to deliver
7 honest, credible, and accurate scientific and technical
8 information about cosmetics and personal care products.
9 We take this responsibility very seriously, and we are
10 pleased to represent our industry in the International
11 Cooperation on Cosmetics Regulation.

12 The cosmetics and personal care products
13 industry is a truly global industry, dependent on open
14 markets and transparent, consistent regulatory
15 environments around the world. Our member companies
16 continually strive to uphold and surpass the most
17 stringent standards and regulatory processes worldwide
18 and to provide consumers with safe, innovative, and
19 high quality cosmetic and personal care products, the
20 ingredients for which are globally sourced.

21 International trade is a critical component
22 to the success of our industry, and significantly

1 contributes to our ability to expand manufacturing and
2 employment, as well as to support other industries such
3 as advertising, packaging, and transportation. The
4 globalization of our industry promotes continual
5 technological innovation, which contributes
6 significantly to the application of scientific
7 advancements and benefits consumers around the world.
8 For all of these reasons, the Personal Care Products
9 Council is actively engaged in international efforts to
10 align global regulatory standards for consumer
11 products, to eliminate trade barriers, and to ensure a
12 level playing field for our member companies while at
13 the same time reinforcing consumer confidence in
14 product safety. Initiatives such as the Trans-Pacific
15 Partnership, the proposed Transatlantic Trade and
16 Investment Partnership, and other international trade,
17 regulatory fora, and scientific exchanges support these
18 objectives.

19 The stated mission of ICCR, "to maintain the
20 highest level of global consumer protection, while
21 minimizing barriers to international trade,"
22 underscores the important role of FDA and other

1 regulators in a global environment.

2 We believe that the ICCR can serve as an
3 important forum for alignment of regulations, policies,
4 and guidelines affecting our industry and as a source
5 for other countries looking to model their regulatory
6 approaches around such common guidelines.

7 As the ICCR is now completing its seventh
8 cycle, it is important to acknowledge the important
9 decisions that have been taken by regulators in the
10 process already, including support for a common
11 standard for cosmetic Good Manufacturing Practices; a
12 common definition of nanotechnology as it pertains to
13 cosmetic products; principles of cosmetic products
14 safety assessment; and promotion of validated methods
15 for alternatives to animal testing.

16 We believe the ICCR has an especially
17 important role in considering common science-based
18 policies for the treatment of trace substances which
19 can sometimes be found in cosmetic products and
20 ingredients, many of them arising from natural sources.

21 For example, over the past several years, the
22 ICCR Traces Working Group, which consists of scientists

1 and regulatory experts from the four ICCR
2 jurisdictions, including regulators, recommended
3 Principles of Handling Trace Materials, and this was
4 endorsed by the ICCR. The ICCR Traces Working Group
5 has also developed recommendations for the management
6 of lead in cosmetics and 1,4-Dioxane, and this past
7 year have been working on recommendations regarding
8 trace levels of mercury, which will be presented to the
9 ICCR-7 meeting in Tokyo in July.

10 The acceptance of an aligned position in the
11 areas of traces helps to ensure the application of
12 sound science, both within ICCR as well as non-ICCR
13 members, that is useful for both regulatory authorities
14 and the global industry. Therefore, we hope that the
15 ICCR regulators will endorse these and the other ICCR
16 recommendations and implement all ICCR decisions as
17 guidances or other regulatory measures as appropriate.

18 The invitation to six other countries to
19 participate in last year's "Global Regulators Forum,"
20 hosted by the FDA, was an important step in including
21 other partners in the global regulatory alignment
22 effort.

1 Our industry fully supports the formal
2 expansion of ICCR to countries such as China, Brazil,
3 Korea, Australia, and other interested countries that
4 would both contribute and benefit from this important
5 work.

6 We understand that the expansion of ICCR to
7 other members means that our efforts must become even
8 more efficient and that the ICCR processes and
9 procedures become even more effective. We look forward
10 to working with FDA and other regulators to enhance the
11 ICCR process in the months and years ahead.

12 Thank you very much.

13 DR. KATZ: Thank you.

14 Our next speaker is Dr. Nick Palmer, from
15 Cruelty Free International.

16 DR. PALMER: Thank you. Thank you very much.
17 I am very grateful to the Food and Drug Administration
18 for organizing this event and letting us take part, and
19 to everyone here for their interest.

20 I am very aware of the limited time, so just
21 very briefly an introduction on Cruelty Free
22 International. Some of you may not know it's the

1 leading organization focused specifically on the ending
2 of animal testing for product testing on a global
3 basis, and that's focused initially on cosmetics. We
4 hope later on to move to other household products.

5 MS. COOK: I think we're going to have to do
6 this manually for you because it's not the usual format
7 for PowerPoint.

8 DR. PALMER: Okay. It's working now. I just
9 pressed it too hard. It was a bit more sensitive than
10 I realized.

11 We have offices in Boston, London, Singapore,
12 and we have partnerships with organizations in all the
13 major cosmetic markets, specifically India, Korea,
14 Vietnam, Brazil, and Australasia. Because of the time
15 limit, I won't go through the individual country
16 positions, but if there is anyone interested here in
17 them, I'm happy to talk after the meeting.

18 So the European Union, as you'll be aware,
19 has recently introduced a ban on animal testing for
20 cosmetic purposes. This slide is perhaps interesting
21 as it shows the process that took place. Way back in
22 2004, the European Union banned all finished product

1 testing for cosmetics on animals, and during 2004 to
2 2009 they had the rolling process of phasing out animal
3 testing on ingredients as soon as alternatives were
4 validated.

5 In 2009, there was a ban on the testing of
6 ingredients within the European Union but not yet for
7 imports, and this year the process was completed with a
8 ban on imports on cosmetic ingredients or products
9 which had been tested primarily for the purpose of
10 animals (sic) -- primarily for the purpose of
11 cosmetics.

12 Now, we'll skip a couple of national pictures
13 and come specifically to the issues that arise. Now,
14 Cruelty Free International would obviously be
15 delighted, and so I think would many of the others
16 here, if there was simply a decision at the ICCR that
17 all of the participating members wanted to move towards
18 the same kind of global ban. Realistically, we realize
19 that isn't going to happen, and we wanted to focus
20 honestly on the three issues which come up all the time
21 when the ban is discussed.

22 The first is the interaction with REACH and

1 with other testing environments. What is a company
2 supposed to do if it's got an ingredient which is used
3 both in cosmetics and for other purposes? In some
4 cases, the manufacturer may not even know initially
5 whether its main market is cosmetics or something else.
6 And there are various positions on this. The one on
7 the left is what we would like, which says if the
8 ingredient has been tested on animals, you can't use it
9 for cosmetics. The middle position would be that you
10 cannot use the animal tests to prove safety, but you
11 can do other tests to prove safety. So the fact that
12 you've done animal tests doesn't actually rule it out.
13 And then the third position would simply be if you've
14 done the test, you can use the data so long as you've
15 initially done it due to some separate testing regime.
16 The European Commission position, somewhere between
17 Number 1 and Number 2, that products cannot be marketed
18 if their ingredient has been tested primarily for
19 cosmetic purposes.

20 The second issue, innovation. One of the
21 concerns of industry, we understand, is that the
22 introduction of the ban could impede the introduction

1 of exciting new ingredients which would develop the
2 market. We understand with Cosmetics Europe only 3 to 5
3 percent of new cosmetics each year actually have new
4 ingredients, so that just sets the proportions, and a
5 significant number of those have already been proved
6 safe by using non-animal methods or under alternative
7 testing regimes like REACH.

8 The balance we struck here is between the
9 consumer demand, which all over the world reflects the
10 same wish to move away from animal testing that was
11 referred to in the first presentation, with the need
12 for innovation, which is very important to the
13 industry. And I think it's fair to say in Europe the
14 drive for non- animal alternatives are very much
15 spurred by the impending ban. Industry just felt, well,
16 if we're going to have this ban, we better get on with
17 it, and I've spoken to many of the leading figures in
18 industry, and they acknowledge that was a major factor.
19 Ultimately, we do have here a political decision, how
20 far are we willing to respond to consumers who are
21 particularly concerned about animal testing?

22 The third problem is China. That industry

1 has at least superficially a real dilemma here. If
2 they want to sell something in China, they know the
3 product will be tested on animals, and if they want to
4 sell it in Europe, they can't test it on animals. So
5 what are they supposed to do? China is aware of the
6 issue because they won't be able to export to Europe
7 ultimately, they don't want to be pushed around and
8 told what to do, but they are moving, they've got the
9 draft guideline on the 3T3 NRU alternative validation.
10 They're working intensely with IIVS, I see Dr. Brian
11 Jones back in the room here, spends I think much of his
12 time in China instead of with his wife, and she
13 appreciates the sacrifice I hope, and there is I
14 understand a 5-year plan to introduce most of the OECD
15 Test Guidelines for Alternatives to Animal Testing, and
16 intensive training programs are underway. And China's
17 industry is concerned about the potential impacts on
18 future export ambitions, so they are moving also in
19 this direction.

20 Now, I'll skip the science bits because I'm
21 again happy to talk again after the meeting with anyone
22 interested.

1 Our message really for the ICCR is in the
2 light of this tremendous movement across the globe and
3 the concern about animal testing, which is visible
4 among consumers in each country, it would be very
5 helpful both to consumers and to industry if there was
6 some kind of roadmap, so even if they're not going to
7 implement this ban right away, in the same way as in
8 Europe, people could see the dimensions, they're moving
9 in that direction, what the likely time scale was. If
10 industry knows that, it will shape the development of
11 alternatives, and if consumers know it, they will see
12 that the regulatory bodies are responding to their
13 concerns.

14 And specifically there are three issues which
15 we hope the meeting in July will look at.

16 Firstly, is there any reason at all to allow
17 animal testing on finished products? It has
18 practically died out. It hasn't happened in Europe for
19 nearly 10 years now. Most of the companies that we
20 talk to say that they really don't have an interest in
21 doing this, they don't feel it's necessary for safety,
22 and they would be quite happy to live with a ban on

1 animal testing of finished products, and that would
2 probably -- because not much is going on, the actual
3 number of animal tests reduced that way would be pretty
4 limited, but it would show the regulators responding to
5 consumers by actually putting a stop to that.

6 The second point would be even if we can't do
7 it overnight, can a deadline be set when the regulators
8 expect to end all their animal testing for cosmetic
9 purposes so that industry has both a target but also
10 certainty? So it's just important to industry to know
11 where they stand.

12 And thirdly, where an alternative has been
13 validated either in the U.S. or in Japan or in Canada,
14 shouldn't the regulators say that the animal tests for
15 that particular endpoint should end immediately?
16 Because it just makes life difficult for industry if
17 they've got this uncertainty of when they are going to
18 be required to phase the things out, and if the
19 alternative is available, they would like the
20 confidence that it would be accepted in all the
21 regulatory regions, and it's reasonable then again as a
22 response to consumers, the alternative is there, it's

1 no longer necessary to do the animal tests, shouldn't
2 the regulators then say, all right, it's time to stop?

3 Contact details right at the back. I'm here
4 until tomorrow evening. I'm happy to talk with anyone
5 interested. And otherwise, please get in touch. Thank
6 you for listening.

7 DR. KATZ: Thank you.

8 And our final speaker is Annie Ugurlayan,
9 from the National Advertising Division.

10 MS. UGURLAYAN: Good afternoon. Thank you to
11 the FDA for the opportunity to participate in today's
12 public hearing. My name is Annie Ugurlayan, and I am a
13 senior staff attorney at the National Advertising
14 Division. The National Advertising Division is the
15 investigative arm of the Advertising Self-Regulatory
16 Council, or the ASRC, and is administered by the
17 Council of Better Business Bureaus.

18 The ASRC establishes the policies and
19 procedures for advertising industry self-regulation,
20 including the NAD, the Children's Advertising Review
21 Unit, the National Advertising Review Board, the
22 Electronic Retailing Self-Regulation Program, and the

1 Online Interest-Based Advertising Accountability
2 Program.

3 The NAD monitors and evaluates truth and
4 accuracy in national advertising in any medium, whether
5 directed to consumers ages 12 and over, businesses, or
6 other service professionals. The NAD initiates cases
7 as a result of its own monitoring in response to formal
8 competitor complaints filed through a "challenge"
9 process and from consumer complaints and complaints by
10 the local Better Business Bureaus.

11 Although the NAD's self-monitoring efforts
12 are limited due to resource constraints, most cases are
13 initiated by competitors, it routinely monitors
14 advertising. The review process, though voluntary and
15 informal, follows a detailed set of procedures
16 available on NAD's website. All decisions are made
17 public. The failure to participate in the NAD process
18 or failure to implement NAD-recommended changes at the
19 conclusion of the process results in automatic public
20 referral to the appropriate federal or state regulatory
21 agency. As discussed below, cosmetics advertising has
22 been an important area of focus in NAD's self-

1 monitoring efforts, and the NAD issues approximately
2 five decisions involving cosmetic products each year.

3 The benefits of effective self-regulation are
4 manifold, from speedily resolving complaints, to
5 creating high standards of truth and accuracy, to
6 increasing public trust in the credibility of
7 advertising, to enabling consumers to make better
8 purchasing decisions, and to the promotion of fair
9 competition. Government regulators, such as the
10 Federal Trade Commission and the states attorneys
11 general, can, as a result, devote their limited
12 resources to investigate advertisers who deliberately
13 engage in deception or endanger the health, safety, or
14 financial well-being of the public. The self-
15 regulatory system is bolstered by the long-time support
16 of the FTC.

17 For cosmetics advertising featuring anti-
18 aging claims, nearly all of the cases are self-
19 initiated, or monitoring, cases. NAD has reviewed over
20 50 cosmetics cases since 1987, and more than 60 percent
21 of those cases occurred within the last 10 years.
22 During this time, some manufacturers have made very

1 strong performance claims promising dramatic reductions
2 in wrinkles and other unwanted signs of aging, and in
3 other instances posturing their products as equivalent
4 to, or substitutes for, surgical procedures. Attached
5 is our Cosmetics Case Digest, which provides summaries
6 of our cases over the last 3 years.

7 NAD decisions have provided guidance to
8 cosmetics advertisers on a variety of issues including,
9 but not limited to, the following: to avoid likening
10 the results obtained by topical cosmetics products to
11 invasive medical procedures; to avoid overstating the
12 efficacy of their cosmetics products by ensuring that
13 all messages reasonably conveyed by the advertisement,
14 which may be different from the messages that the
15 advertiser intended to convey, are properly supported
16 by competent and reliable scientific testing that
17 elicits statistically significant and consumer
18 meaningful results; ensuring that performance claims
19 based on self- assessments from consumer use testing
20 mirror the wording of the specific questions upon which
21 the claims are based to avoid overstating product
22 performance; advising that in the absence of testing on

1 the actual product, claims about the benefits of
2 certain ingredients may be appropriate provided there
3 are reliable studies that link the ingredient to a
4 claimed product benefit, that the amount tested was the
5 same amount as is found in the product, and that the
6 claims accurately reflect the studies' results; to
7 ensure that photographs and product demonstrations
8 which depict product performance accurately reflect
9 what consumers can reasonably expect to achieve when
10 using the product as directed; and finally, to advise
11 that disclosures cannot cure an otherwise inaccurate
12 claim, but they can be appropriate in instances where
13 the claim is accurate provided they are clear,
14 conspicuous and in close proximity to the claims they
15 are qualifying.

16 "Natural" and "organic" claims are
17 increasingly prevalent in cosmetics advertising in
18 response to increased consumer demand for such
19 products. When evaluating such claims, NAD will, as
20 always, look at the challenged claims in the context of
21 the advertising at issue to determine the messages that
22 are conveyed. In the absence of any defined standard

1 by the FDA of "natural" or "organic," NAD considers
2 industry usage, consumer expectation, and any testing
3 or other scientific evidence that relate to the source
4 and the amount of each ingredient in the product. NAD
5 tries, whenever possible, to harmonize its decisions
6 with any relevant regulatory authority, but in the
7 absence of regulatory guidance, seeks to ensure that
8 these terms are used consistently with consumer
9 understanding.

10 In conclusion, NAD's goal in its cosmetics
11 cases is to ensure that advertising claims are
12 truthful, accurate, and substantiated by competent and
13 reliable evidence before they are disseminated.
14 Cosmetics advertising claims have been an active and
15 important part of NAD's monitoring efforts and will be
16 a continued focus in the future. This product area has
17 evolved enormously over the years, and NAD's decisions
18 seek to ensure that claims about a product mirror the
19 testing conducted on the product. Because under its
20 procedures the NAD can receive both the views of the
21 advertiser and the challenger to assist review of the
22 substantiation offered in support of an advertising

1 claim, NAD has encouraged increased competitor
2 challenges in this product area. The more information
3 NAD has about the underlying science, the more informed
4 decisions it can make. The NAD process upholds
5 standards that enhance the credibility of brands,
6 encourages product innovation, and improves consumer
7 confidence in advertising.

8 It is our hope that the ICCR meeting will
9 consider the important role of advertising self-
10 regulation in the area of cosmetics and that its
11 determinations will advance the mission of advertising
12 self-regulation especially by encouraging cosmetic
13 industry support and participation in self-regulation
14 as an important complement to FDA oversight. This will
15 help ensure that consumers receive truthful and
16 accurate advertising messages.

17 Thank you.

18 DR. KATZ: Thank you.

19 Adjourn

20 DR. KATZ: And with that, we have reached the
21 end of our meeting at this point in time since
22 there were no other requests to speak during the

1 timeframe that we were accepting speakers. So with
2 that, I would like to thank everyone for coming. If
3 you have any additional information that you would like
4 to make sure that reaches us before the ICCR meeting in
5 July, feel free to contact me directly or Rosemary
6 Cook. Her contact information was available on the
7 Federal Register Notice, and we will be glad to take
8 that information along with us to the meeting.

9 Thank you very much for coming.

10 (Whereupon, at 3:02 p.m., the ICCR Public
11 Meeting was adjourned.)
